

Clinical trial results:

A Multi-center Open-label Parallel Group Randomized Controlled Trial to Compare iGlarLixi Versus Premixed Insulin in Patients With Type 2 Diabetes Who Have Failed to Achieve Glycemic Control With Basal Insulin and Oral Antidiabetic Agents

Summary

EudraCT number	2017-003370-13
Trial protocol	CZ AT ES SE BG GR RO
Global end of trial date	19 July 2020

Results information

Result version number	v1 (current)
This version publication date	28 July 2021
First version publication date	28 July 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 September 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	19 July 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that in subjects with Type 2 diabetes mellitus (T2DM) failing to achieve control on their current basal insulin combined to 1 or 2 Oral Antidiabetic Drugs (OADs) regimen, iGlarLixi compared to premix insulin Biasp 30/70 twice daily (BID) showed non-inferiority of iGlarLixi in terms of Glycated hemoglobin (HbA1c) reduction or superiority in terms of body weight change at Week 26.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

OAD treatment of Metformin alone or Metformin + Sodium-glucose co-transporter 2 inhibitor (SGLT-2i) was continued at stable doses.

Evidence for comparator: -

Actual start date of recruitment	08 November 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	North Macedonia: 40
Country: Number of subjects enrolled	Mexico: 90
Country: Number of subjects enrolled	Romania: 30
Country: Number of subjects enrolled	Saudi Arabia: 1
Country: Number of subjects enrolled	Serbia: 78
Country: Number of subjects enrolled	Taiwan: 30
Country: Number of subjects enrolled	Turkey: 18
Country: Number of subjects enrolled	Argentina: 70
Country: Number of subjects enrolled	India: 182
Country: Number of subjects enrolled	Korea, Republic of: 89
Country: Number of subjects enrolled	Kuwait: 25
Country: Number of subjects enrolled	Spain: 36
Country: Number of subjects enrolled	Sweden: 30
Country: Number of subjects enrolled	Austria: 5

Country: Number of subjects enrolled	Bulgaria: 51
Country: Number of subjects enrolled	Czechia: 90
Country: Number of subjects enrolled	Greece: 22
Worldwide total number of subjects	887
EEA total number of subjects	264

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	573
From 65 to 84 years	313
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

A total of 1074 subjects were screened from 08 November 2018 to 02 December 2019 of which 187 were screen failures. Screen failure were mainly due to inclusion criteria not met.

Pre-assignment

Screening details:

A total of 887 subjects were randomised in 1:1 ratio to receive either iGlarLixi or Premixed insulin. Stratification was done at randomisation, based on HbA1c value (less than [$<$] 8 percentage [%], greater than or equal to [\geq] 8%), use of SGLT-2i (Yes/No), and dose of basal insulin (<30 Units [U], ≥ 30 U) at screening visit.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	iGlarLixi

Arm description:

Subjects received iGlarLixi subcutaneously once a day for up to 26 weeks.

Arm type	Experimental
Investigational medicinal product name	iGlarLixi (insulin glargine/lixisenatide)
Investigational medicinal product code	HOE901/AVE0010
Other name	Suliqua
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

iGlarLixi (Fixed ratio combination of insulin glargine and lixisenatide) administered subcutaneously once a day within 1 hour prior to a meal with a prefilled disposable SoloStar® pen-injector. The dose was titrated according to the subject's need for insulin.

Arm title	Premixed insulin
------------------	------------------

Arm description:

Subjects received Premix BiAsp 30 BID for up to 26 weeks.

Arm type	Experimental
Investigational medicinal product name	Premix BiAsp 30
Investigational medicinal product code	
Other name	NovoMix® 30
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Premixed insulin 3 millilitre (mL) administered subcutaneously BID. The dose was titrated according to the subject's need for insulin and usual practice.

Number of subjects in period 1	iGlarLixi	Premixed insulin
Started	443	444
Treated	442	441
Completed	428	416
Not completed	15	28
Adverse Events (AEs)	4	4
Randomised and not treated	1	3
Other	1	4
Poor compliance to protocol	1	2
Hypoglycemia	-	2
Withdrawal by subject	8	12
Lack of efficacy	-	1

Secondary: Number of Subjects with Hypoglycemia Event

End point title	Number of Subjects with Hypoglycemia Event
End point description:	
Any hypoglycemia event represents the number of subjects with any (severe or documented) hypoglycemia. Documented hypoglycemia was considered when measured plasma glucose concentration less than or equal to (\leq) 70 mg/dL (≤ 3.9 mmol/L) (with or without symptoms). Hypoglycemia defined as plasma glucose level of <54 mg/dL (<3.0 mmol/L) was also considered. Severe hypoglycemia was an event defined as hypoglycemia with severe cognitive impairment (AE preferred term- hypoglycemic unconsciousness) requiring external assistance for recovery. Analysis was performed on the safety population that included randomised population who received at least 1 dose or part of a dose of the investigational medicinal product (IMP) analysed according to the treatment actually received.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All AEs were collected from the first injection of the IMP up to 3 days after last injection regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported AEs and deaths are TEAEs that developed, worsened, or became serious during the on-treatment period (time from the first injection of the IMP up to 3 days after the last injection of IMP).

Analysis was performed on safety population.
