

## Clinical trial results:

**An open-label, non-controlled, multicenter, pilot clinical trial of inhaled molgramostim in subjects with antibiotic-resistant non-tuberculosis mycobacterial (NTM) infection.**

### Summary

EudraCT number	2017-003374-14
Trial protocol	GB
Global end of trial date	13 January 2020

### Results information

Result version number	v2 (current)
This version publication date	15 February 2023
First version publication date	29 January 2021
Version creation reason	• Correction of full data set Change of Sponsor contact person

### Trial information

#### Trial identification

Sponsor protocol code	SAV008-01
-----------------------	-----------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03421743
WHO universal trial number (UTN)	-
Other trial identifiers	OPTIMA: OPTIMA

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 March 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 January 2020
Global end of trial reached?	Yes
Global end of trial date	13 January 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Primary objective of the trial: To investigate efficacy of inhaled molgramostim on NTM sputum culture conversion to negative.

Protection of trial subjects:

Subjects could be discontinued from treatment and assessments at any time, if deemed necessary by the investigator.

Potential reasons for discontinuation of treatment included lack of efficacy/worsening of disease and unacceptable AE.

In case of worsening of NTM pulmonary disease, antimycobacterial treatment could be added or a dosage increase of antimycobacterial treatment could be applied as rescue treatment, according to investigator's discretion.

A safety interim analysis and data monitoring were conducted during the trial for the purpose of overseeing safety.

Background therapy:

Anti-mycobacterial therapy was continued, if ongoing.

Evidence for comparator: -

Actual start date of recruitment	01 March 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 30
Country: Number of subjects enrolled	United Kingdom: 2
Worldwide total number of subjects	32
EEA total number of subjects	2

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	16
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Adults with chronic pulmonary NTM infection and a positive sputum culture at Screening were recruited into 2 groups:

1: On multidrug NTM guideline based antimycobacterial regimen ongoing for  $\geq 6$  months prior to Baseline.

2: Had stopped multidrug NTM regimen  $\geq 28$  days prior to Screening (lack of response/intolerance)/never started such treatment.

### Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Group 1
------------------	---------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Molgramostim nebulizer solution 300 $\mu\text{g}$
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Molgramostim nebulizer solution 300  $\mu\text{g}$ , administered once-daily by inhalation using an eFlow Nebulizer System.

<b>Arm title</b>	Group 2
------------------	---------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Molgramostim nebulizer solution 300 $\mu\text{g}$
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Molgramostim nebulizer solution 300  $\mu\text{g}$ , administered once-daily by inhalation using an eFlow Nebulizer System.

<b>Number of subjects in period 1</b>	Group 1	Group 2
Started	14	18
Completed	11	16
Not completed	3	2
Adverse event, serious fatal	2	1
Consent withdrawn by subject	-	1
Lack of efficacy	1	-

## Baseline characteristics

Male	2	8	10

## End points

### End points reporting groups

Reporting group title	Group 1
Reporting group description: -	
Reporting group title	Group 2
Reporting group description: -	

### Primary: Sputum culture conversion

End point title	Sputum culture conversion <sup>[1]</sup>
End point description: Sputum culture conversion defined as at least three consecutive negative sputum samples during the treatment period.	
End point type	Primary
End point timeframe: Baseline to week 48.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This was an exploratory study without hypothesis testing. Only descriptive statistics were used.

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	14	18		
Units: Subjects with sputum culture conversion	2	3		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Sputum smear conversion

End point title	Sputum smear conversion
End point description: Sputum smear conversion defined as at least three consecutive negative acid-fast bacilli (AFB) stained sputum smears on microscopy during the treatment period in subjects who were smear positive at Baseline.	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	13	16		
Units: Subjects with conversion	5	6		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Durability of sputum culture conversion

End point title	Durability of sputum culture conversion
End point description: Durability of sputum culture conversion (defined as conversion at or before Week 48 and culture still negative at 12-week Follow-up).	
End point type	Secondary
End point timeframe: Assessed at 12-week Follow-up.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	14	18		
Units: Subjects with durable conversion	1	1		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Durability of sputum smear conversion

End point title	Durability of sputum smear conversion
End point description: Durability of sputum smear conversion (defined as conversion at or before Week 48 and smear still negative at 12-week Follow-up). Includes 2 subjects who were culture positive but smear negative at baseline.	
End point type	Secondary
End point timeframe: Assessed at 12-week Follow-up.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	14	18		
Units: Subjects with durable conversion	5	6		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Change in sputum smear grade

End point title	Change in sputum smear grade
End point description: Change in grade of number of NTM on microscopy of AFB stained sputum smears. A grade between 0 and 4 was assigned (0 corresponding to no AFB on microscopy).	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9	16		
Units: Smear grade				
arithmetic mean (standard deviation)	-0.8 (± 0.8)	-0.5 (± 1.0)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Change in sputum culture grade

End point title	Change in sputum culture grade
End point description: Change in grade of sputum cultures. A grade between 0 and 3 was assigned (0 corresponding to no growth).	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	2	10		
Units: culture grade				
arithmetic mean (standard deviation)	0.0 ( $\pm$ 0.0)	0.1 ( $\pm$ 1.4)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change in symptom scores: LRTI total score

End point title	Change in symptom scores: LRTI total score
End point description: Change in symptom scores (assessed using Lower Respiratory Tract Infections – visual analogue scale [VAS]).	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9	16		
Units: Units on VAS				
arithmetic mean (standard deviation)	2.48 ( $\pm$ 9.13)	4.32 ( $\pm$ 13.32)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change in GRH

End point title	Change in GRH
End point description: Change in Global Rating of Health. GRH assesses global health on a scale from 1 to 4, 4 representing the best.	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9	16		
Units: Units on GRH scale				
arithmetic mean (standard deviation)	-0.78 ( $\pm$ 0.67)	-0.38 ( $\pm$ 0.81)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change in body weight

End point title	Change in body weight
End point description: Change in body weight.	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9	15		
Units: kilogram(s)				
arithmetic mean (standard deviation)	-1.77 ( $\pm$ 2.51)	-1.44 ( $\pm$ 3.09)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change in 6MWD

End point title	Change in 6MWD
End point description: Change in 6-minute walking distance (6MWD) during a 6-minute walk test (6MWT).	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9	15		
Units: meter				
arithmetic mean (standard deviation)	-17.1 (± 62.5)	12.5 (± 56.2)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change in dyspnoea score

End point title	Change in dyspnoea score
End point description: Change in Borg CR10 scores during a 6-minute walk test (6MWT). The post-walk score is reported.	
End point type	Secondary
End point timeframe: Baseline to week 48.	

End point values	Group 1	Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9	15		
Units: Borg CR10 score				
arithmetic mean (standard deviation)	0.79 (± 0.92)	1.43 (± 3.01)		

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline to 12-week follow-up (60 weeks in total).

Assessment type	Non-systematic

Pneumonia			
subjects affected / exposed	1 / 18 (5.56%)	1 / 14 (7.14%)	
occurrences (all)	1	1	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 November 2017	The date reflects final amended protocol version 2.0. The changes were made before the protocol was submitted to any competent authority or independent ethics committee.
23 August 2018	The date reflects final amended protocol version 3.0. The number of sputum samples per visit was increased to strengthen the validity and robustness of the microbiological assessments. Definition of sexual abstinence was added.
04 October 2018	The date reflects final amended protocol version 4.0. Treatment period extended by 24 weeks to a total of 48 weeks. Dose modifications allowed after sponsor approval in case of intolerance in order to maintain subjects on treatment if deemed feasible by the investigator. CT scan added at week 48. CT scans should only be performed if this is already a part of local standard at the site. Safety laboratory sampling added at the 12-week Follow-up visit in order to assess the laboratory parameters.
