

## Clinical trial results:

### Effect and safety of semaglutide 2.4 mg once-weekly in subjects with overweight or obesity and type 2 diabetes

#### Summary

EudraCT number	2017-003414-10
Trial protocol	GB DE ES GR
Global end of trial date	01 May 2020

#### Results information

Result version number	v2 (current)
This version publication date	02 July 2021
First version publication date	15 May 2021
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	NN9536-4374
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03552757
WHO universal trial number (UTN)	U1111-1200-8148
Other trial identifiers	JapicCTI: 183992

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	28 August 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 March 2020
Global end of trial reached?	Yes
Global end of trial date	01 May 2020
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

To compare the effect of semaglutide subcutaneous (s.c.; under the skin) 2.4 milligram (mg) once-weekly versus semaglutide placebo I/II as an adjunct to a reduced-calorie diet and increased physical activity in subjects with overweight or obesity and type 2 diabetes (T2D) on body weight.

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki (2013) and International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice (2016) and 21 United States (US) Code of Federal Regulations (CFR) 312.120.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	04 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	United Arab Emirates: 38
Country: Number of subjects enrolled	Argentina: 62
Country: Number of subjects enrolled	Canada: 55
Country: Number of subjects enrolled	Germany: 70
Country: Number of subjects enrolled	Spain: 56
Country: Number of subjects enrolled	United Kingdom: 86
Country: Number of subjects enrolled	Greece: 47
Country: Number of subjects enrolled	India: 164
Country: Number of subjects enrolled	Japan: 125
Country: Number of subjects enrolled	Russian Federation: 96
Country: Number of subjects enrolled	United States: 361
Country: Number of subjects enrolled	South Africa: 50
Worldwide total number of subjects	1210
EEA total number of subjects	173

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	953
From 65 to 84 years	257
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The trial was conducted at 149 sites in 12 countries as follows: Argentina (5 sites), Canada (10 sites), Germany (9 sites), Greece (6 sites), India (18 sites), Japan (12 sites), Russian Federation (9 sites), South Africa (6 sites), Spain (8 sites), United Arab Emirates (5 sites), United Kingdom (10 sites) and United States (51 sites).

### Pre-assignment

Screening details:

Subjects were randomised in 1:1:1 ratio to receive either 'semaglutide 2.4 milligram (mg) and placebo II (placebo matched to semaglutide 1.0 mg) once weekly', 'semaglutide 1.0 mg and placebo I (placebo matched to semaglutide 2.4 mg) once weekly' or 'placebo I and placebo II once weekly'.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Semaglutide and placebo were identical in appearance and were packed and labelled to fulfil the requirements for double-blind procedures.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Semaglutide 1.0 mg

Arm description:

Subjects received once-weekly s.c semaglutide injections for 68 weeks: 0.25 mg from week 1-4, 0.5 mg from week 5-8 and 1.0 mg from week 9-68. Subjects also received once-weekly placebo I (placebo matched to semaglutide 2.4 mg) s.c. injection for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.

Arm type	Active comparator
Investigational medicinal product name	Semaglutide B 1.34 mg/mL PDS290
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosing was done once weekly with dose escalation every fourth week until semaglutide 1.0 mg was reached. Semaglutide was administered using a PDS290 pre-filled pen-injector containing semaglutide 1.34 mg/mL. Injection was done once weekly at the same day of the week (to the extent possible). Injections were administered in the thigh, abdomen or upper arm, and at any time of the day irrespective of meals.

<b>Arm title</b>	Semaglutide 2.4 mg
------------------	--------------------

Arm description:

Subjects received once-weekly s.c semaglutide injections for 68 weeks: 0.25 mg from week 1-4, 0.5 mg from week 5-8, 1.0 mg from week 9-12, 1.7 mg from week 13-16 and 2.4 mg from week 17-68. Subjects also received once-weekly placebo II (placebo matched to semaglutide 1.0 mg) s.c. injection for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Semaglutide B 1.0 mg/mL PDS290
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Semaglutide 1.0 mg/mL was only dispensed at the first dispensing visit to cover the 0.25 and 0.5 mg dose escalation purposes. Semaglutide was administered using a PDS290 pre-filled pen-injector containing semaglutide 1.0 mg/mL. Injection was done once weekly at the same day of the week (to the extent possible). Injections were administered in the thigh, abdomen or upper arm, and at any time of the day irrespective of meals.

Investigational medicinal product name	Semaglutide B 3.0 mg/mL PDS290
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Dosing was done once weekly with dose escalation every fourth week until semaglutide 2.4 mg was reached. Semaglutide was administered using a PDS290 pre-filled pen-injector containing semaglutide 3.0 mg/mL. Injection was done once weekly at the same day of the week (to the extent possible). Injections were administered in the thigh, abdomen or upper arm, and at any time of the day irrespective of meals.

<b>Arm title</b>	Placebo
------------------	---------

**Arm description:**

Subjects received once-weekly s.c placebo injections (both placebo I (placebo matched to semaglutide 1.0 mg) and placebo II (placebo matched to semaglutide 2.4 mg) for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.

Arm type	Placebo
Investigational medicinal product name	Placebo I
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Placebo I (placebo matched to semaglutide 2.4 mg) was administered using a PDS290 pre-filled pen-injector by subjects in both 'semaglutide 1.0 mg' and 'placebo' groups. Injection was done once weekly at the same day of the week (to the extent possible). Injections were administered in the thigh, abdomen or upper arm, and at any time of the day irrespective of meals.

Investigational medicinal product name	Placebo II
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Placebo II (placebo matched to semaglutide 1.0 mg) was administered using a PDS290 pre-filled pen-injector by subjects in both 'semaglutide 2.4 mg' and 'placebo' groups. Injection was done once weekly at the same day of the week (to the extent possible). Injections were administered in the thigh, abdomen or upper arm, and at any time of the day irrespective of meals.

<b>Number of subjects in period 1</b>	Semaglutide 1.0 mg	Semaglutide 2.4 mg	Placebo
Started	403	404	403
Exposed	402	403	402
Full analysis set (FAS)	403	404	403
Safety analysis set (SAS)	402	403	402

## End points

### End points reporting groups

Reporting group title	Semaglutide 1.0 mg
Reporting group description: Subjects received once-weekly s.c semaglutide injections for 68 weeks: 0.25 mg from week 1-4, 0.5 mg from week 5-8 and 1.0 mg from week 9-68. Subjects also received once-weekly placebo I (placebo matched to semaglutide 2.4 mg) s.c. injection for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.	
Reporting group title	Semaglutide 2.4 mg
Reporting group description: Subjects received once-weekly s.c semaglutide injections for 68 weeks: 0.25 mg from week 1-4, 0.5 mg from week 5-8, 1.0 mg from week 9-12, 1.7 mg from week 13-16 and 2.4 mg from week 17-68. Subjects also received once-weekly placebo II (placebo matched to semaglutide 1.0 mg) s.c. injection for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.	
Reporting group title	Placebo
Reporting group description: Subjects received once-weekly s.c placebo injections (both placebo I (placebo matched to semaglutide 1.0 mg) and placebo II (placebo matched to semaglutide 2.4 mg) for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.	

### Primary: Change in body weight (%) - semaglutide 2.4 mg versus placebo

End point title	Change in body weight (%) - semaglutide 2.4 mg versus placebo <sup>[1]</sup>
End point description: Change in body weight (%) from baseline (week 0) to week 68 is presented. Results are based on the data from both in-trial and on-treatment observation periods. In-trial observation period: the uninterrupted time interval from the start of randomisation (week 0) to last trial-related subject-site contact (week 75). On-treatment observation period: the interval from the date of first trial product administration (week 0) to the date of last trial product administration (week 68) plus a 2-week follow-up period and excluding any off-treatment time intervals. Off-treatment time interval: time period with at least two consecutive missed doses. Number of subjects analysed = full analysis set (FAS) which comprised all randomised subjects. n = number of subjects with available data.	
End point type	Primary
End point timeframe: From baseline (week 0) to week 68	

#### Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint compared 'Semaglutide 2.4 mg arm' with 'Placebo arm', thus values only for these two arms are provided.

End point values	Semaglutide 2.4 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	404	403		
Units: Percentage point of body weight				
arithmetic mean (standard deviation)				
In-trial observation period (n=388 & 376)	-9.9 (± 8.0)	-3.3 (± 5.5)		
On-treatment observation period (n=351 & 340)	-10.7 (± 7.8)	-3.1 (± 5.2)		

## Statistical analyses

Statistical analysis title	Semaglutide 2.4 mg versus Placebo
Statistical analysis description:	
Results are based on the data from in-trial observation period. Week 68 responses were analysed using an analysis of covariance model (ANCOVA) with randomised treatment, stratification groups (oral anti-diabetic (OAD) treatment status and HbA1c category at screening) and the interaction between stratification groups as factors and baseline body weight as covariate.	
Comparison groups	Semaglutide 2.4 mg v Placebo
Number of subjects included in analysis	807
Analysis specification	Pre-specified
Analysis type	superiority <sup>[2]</sup>
P-value	< 0.0001
Method	ANCOVA
Parameter estimate	Treatment difference
Point estimate	-6.21
Confidence interval	
level	95 %
sides	2-sided
lower limit	-7.28
upper limit	-5.15

Notes:

[2] - 'Number of subjects included in analysis' is being erroneously displayed as 807. It should be read as "number of subjects with an observation at week 68 = 764".

Statistical analysis title	Semaglutide 2.4 mg versus Placebo
Statistical analysis description:	
Results are based on the data from on-treatment observation period. All responses prior to first discontinuation of treatment (or initiation of other anti-obesity medication or bariatric surgery) were included in a mixed model for repeated measurements (MMRM) with randomised treatment, stratification groups (OAD treatment status and HbA1c category at screening) and the interaction between stratification groups as factors and baseline body weight as covariate, all nested within visit.	
Comparison groups	Semaglutide 2.4 mg v Placebo
Number of subjects included in analysis	807
Analysis specification	Pre-specified
Analysis type	superiority <sup>[3]</sup>
P-value	< 0.0001
Method	MMRM
Parameter estimate	Treatment difference
Point estimate	-7.57
Confidence interval	
level	95 %
sides	2-sided
lower limit	-8.56
upper limit	-6.58

Notes:

[3] - 'Number of subjects included in analysis' is being erroneously displayed as 807. It should be read as "number of subjects with an observation at week 68 = 633".

### **Primary: Subjects who achieve body weight reduction $\geq 5\%$ from baseline (week 0) (yes/no) - semaglutide 2.4 mg versus placebo**

End point title	Subjects who achieve body weight reduction $\geq 5\%$ from baseline (week 0) (yes/no) - semaglutide 2.4 mg versus placebo <sup>[4]</sup>
-----------------	--

End point description:

Number of subjects who achieved weight reduction  $\geq 5\%$  of their baseline body weight (yes/no) at week 68 is presented. Results are based on the data from both in-trial and on-treatment observation periods. In-trial observation period: the uninterrupted time interval from the start of randomisation (week 0) to last trial-related subject-site contact. On-treatment observation period: the interval from the date of first trial product administration (week 0) to the date of last trial product administration (week 68) plus a 2 week follow-up period and excluding any off-treatment time intervals. Off-treatment time interval: time period with at least two consecutive missed doses. Number of subjects analysed = FAS which comprised all randomised subjects. n = number of subjects with available data.

End point type	Primary
----------------	---------

End point timeframe:

After 68 weeks

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint compared 'Semaglutide 2.4 mg arm' with 'Placebo arm', thus values only for these two arms are provided.

## Secondary: Change in Short Form 36 v2.0 acute (SF-36) (physical functioning score)

End point title	Change in Short Form 36 v2.0 acute (SF-36) (physical functioning score)
-----------------	---

End point description:

SF-36 is a 36-item patient-reported survey of patient health that measures the subject's overall health-related quality of life (HRQoL). SF-36v2™ questionnaire measured 8 domains of functional health and well-being as well as 2 component summary scores (physical component summary and mental

component summary). This endpoint shows results for 'physical functioning domain'. The 0-100 scale scores from the SF-36 were converted to norm-based scores to enable a direct interpretation in relation to the distribution of the scores in the 2009 U.S. general population. In the metric of norm-based scores, 50 and 10 corresponds to the mean and standard deviation respectively. Change from week 0 in the domain scores were evaluated at week 68. A positive change score indicates an improvement since baseline. Results are based on the data from in-trial observation period. This endpoint was evaluated based on the FAS. Number of subjects analysed = number of subjects with available data.

## Secondary: Subjects who achieve (yes/no): Responder definition value for SF-36 physical functioning score

End point title	Subjects who achieve (yes/no): Responder definition value for SF-36 physical functioning score
-----------------	--

End point description:

Number of subjects experiencing a meaningful within subject improvement in SF-36 Physical function after 68 weeks was determined by two thresholds. The default generic responder threshold of 4.3 is for general population. The threshold of 3.7 is for overweight/obese population in the study and calculated using patient global rating anchor questionnaires to reflect subjects' own perspective based on Food and Drug Administration (FDA) recommendations. In the reported data, number of subjects who have achieved an improvement in score  $\geq$  to threshold are inferred as "Yes" and who have not achieved an improvement in score  $\geq$  to threshold are inferred as "No". The endpoint was evaluated based on in-trial observation period which is the uninterrupted time interval from randomization (week 0) to last trial related subject-site contact. The endpoint was evaluated based on the FAS which comprised all randomised subjects. Number of subjects analysed = number of subjects with available data.

End point description:

Adverse events (AEs) with onset during the on-treatment observation period were defined as treatment-emergent AEs (TEAEs). On-treatment observation period: the interval from the date of first trial product administration (week 0) to the date of last trial product administration (week 68) plus a 7 week follow-up period and excluding any off-treatment time intervals. Off-treatment time interval: time period with at least seven consecutive missed doses. This endpoint was evaluated based on the SAS which included all randomised subjects exposed to at least one dose of randomised treatment. Number of subjects analysed = number of subjects with available data.

End point type	Secondary
----------------	-----------

End point timeframe:

From baseline (week 0) to week 75

Notes:

[8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint compared 'Semaglutide 2.4 mg arm' with 'Placebo arm', thus values only for these two arms are provided.

End point values	Semaglutide 2.4 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	403	402		
Units: Events	2197	1388		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of serious adverse events (SAEs) - semaglutide 2.4 mg versus placebo

End point title	Number of serious adverse events (SAEs) - semaglutide 2.4 mg versus placebo <sup>[9]</sup>
-----------------	--

End point description:

Serious adverse event (SAE) results are based on the on-treatment observation period, which was defined as the interval from the date of first trial product administration (week 0) to the date of last trial product administration (week 68) plus a 7 week follow-up period and excluding any off-treatment time intervals. Off-treatment time interval: time period with at least seven consecutive missed doses. ## Secondary: Number of treatment emergent severe or blood glucose confirmed symptomatic hypoglycaemia episodes - semaglutide 2.4 mg versus placebo

End point title	Number of treatment emergent severe or blood glucose confirmed symptomatic hypoglycaemia episodes - semaglutide 2.4 mg versus placebo <sup>[10]</sup>
-----------------	---

End point description:

Hypoglycaemic episodes with onset during the on-treatment observation period were considered treatment-emergent. On-treatment observation period was defined as the interval from the date of first trial product administration (week 0) to the date of last trial product administration (week 68) plus a 7 week follow-up period and excluding any off-treatment time intervals. Off-treatment time interval: time period with at least 7 consecutive missed doses. Severe hypoglycaemia: An episode requiring assistance of another person to actively administer carbohydrate, glucagon or take other corrective actions. plasma glucose (PG) concentrations may not be available during an event, but neurological recovery following the return of PG to normal is considered sufficient evidence that the event was induced by a low PG concentration. Blood glucose (BG) confirmed symptomatic hypoglycaemia: An episode that is BG confirmed by PG value <3.1 mmol/L (56 mg/dL) with symptoms consistent with hypoglycaemia.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Week 0 to week 75. Results are based on the SAS which included all randomised subjects exposed to at least one dose of randomised treatment.

Adverse event reporting additional description:

All presented AEs are treatment-emergent (i.e., TEAEs).

Assessment type	Systematic

### Reporting groups

Reporting group title	Semaglutide 1.0 mg
-----------------------	--------------------

Reporting group description:

Subjects received once-weekly s.c semaglutide injections for 68 weeks: 0.25 mg from week 1-4, 0.5 mg from week 5-8 and 1.0 mg from week 9-68. Subjects also received once-weekly placebo I (placebo matched to semaglutide 2.4 mg) s.c. injection for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.

Reporting group title	Semaglutide 2.4 mg
-----------------------	--------------------

Reporting group description:

Subjects received once-weekly s.c semaglutide injections for 68 weeks: 0.25 mg from week 1-4, 0.5 mg from week 5-8, 1.0 mg from week 9-12, 1.7 mg from week 13-16 and 2.4 mg from week 17-68. Subjects also received once-weekly placebo II (placebo matched to semaglutide 1.0 mg) s.c. injection for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received once-weekly s.c placebo injections (both placebo I (placebo matched to semaglutide 1.0 mg) and placebo II (placebo matched to semaglutide 2.4 mg) for 68 weeks. Subjects received the treatments as an adjunct to a reduced calorie diet and increased physical activity.

Back pain subjects affected / exposed occurrences (all)	28 / 402 (6.97%) 30	27 / 403 (6.70%) 30	14 / 402 (3.48%) 15
Infections and infestations			
Gastroenteritis subjects affected / exposed occurrences (all)	21 / 402 (5.22%) 25	11 / 403 (2.73%) 12	12 / 402 (2.99%) 14
Nasopharyngitis subjects affected / exposed occurrences (all)	47 / 402 (11.69%) 69	68 / 403 (16.87%) 115	59 / 402 (14.68%) 92
Upper respiratory tract infection subjects affected / exposed occurrences (all)	37 / 402 (9.20%) 54	42 / 403 (10.42%) 48	38 / 402 (9.45%) 50
Metabolism and nutrition disorders			
Decreased appetite subjects affected / exposed occurrences (all)	29 / 402 (7.21%) 33	38 / 403 (9.43%) 41	15 / 402 (3.73%) 17

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 July 2018	Inclusion of genetic biosamples for future analysis for applicable countries. Removal of discontinuation criteria for trial products for subjects enrolled in violation with exclusion/inclusion criteria. Removal of classification of risks, inclusion of a reference to the investigator's brochure. Removal of persistent criteria from exploratory endpoint regarding micro/macro albuminuria.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported

---
