Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 August 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 June 2019
Global end of trial reached?	Yes
Global end of trial date	12 June 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial is to evaluate the clinical efficacy and safety of two oral doses of MP1032 (150 mg bid and 300 mg bid) when taken for 12 weeks by patients with moderate-to-severe chronic plaque psoriasis

Protection of trial subjects:

The trial design consisted of a 28 day screening period, a 12 week treatment period, and subsequently a 28 day follow up (FU) period. Each patient had 6 planned visits and additional unscheduled visits as needed. Safety parameters were monitored from the signing of the ICF until the last FU Visit. Safety was assessed through physical examination, vital signs and safety laboratory. A serum pregnancy test was done for all women at Screening Visit followed by 2 subsequent urine pregnancy tests.

PK samples were collected in a subgroup at five selected trial sites. Patients who discontinued early from the trial should, if possible, have had an Early Termination Visit. This visit should have taken place as soon as possible after the patient stopped taking IMP.

Any medication other than the IMP, was considered a concomitant medication. All medications taken in the 6 weeks before the first dose had to be recorded as concomitant. Medication to treat stable diseases as well as medication to treat AEs were allowed during the course of the trial.

Measures were taken concerning treatment compliance. Criteria that might have warranted the discontinuation of an individual patient from study or even the termination of the whole study had been in place.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 February 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Adults (18-64 years)	147
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

About 150 patients were planned to be randomized to receive either 150 mg or 300 mg MP1032 or placebo orally twice daily for 12 weeks.

Treatment allocation was based on a blinded 1:1:1 ratio (50:50:50 patients). Finally 155 patients were randomized in the ratio 48:52:55 (300mg/150mg/placebo) using an Interactive Web Response System (IWRS).

Pre-assignment

Screening details:

204 patients were screened. 155 were randomized to treatment groups within a maximum time frame of 28 days after screening visit (assessment of demographic, efficacy and safety data), 22 failed screening, i.e. did not meet the inclusion criteria or met any exclusion criteria, 27 were not randomized for further associated reasons.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	MP1032 150mg

Arm description:

Treatment Group - 150mg MP1032 b.i.d.

Arm type	Experimental
Investigational medicinal product name	MP1032 Hard Gelatine Capsules 50mg
Investigational medicinal product code	MP1032
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

3 capsules of "MP1032 Hard Gelatine Capsules 50 mg", i.e. 150 mg MP1032, were administered twice daily over 84 consecutive days.

Investigational medicinal product name	Placebo to MP1032 Hard Gelatine Capsules 50mg
Investigational medicinal product code	Placebo
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

3 capsules of " Placebo to MP1032 Hard Gelatine Capsules 50mg", were administered twice daily over 84 consecutive days

Arm title	Placebo

Subject analysis sets

Subject analysis set title	SES
Subject analysis set type	Safety analysis

Subject analysis set description:

The safety-evaluation-set (SES) included all patients who received any trial medication at least once; all safety analyses will be based on the SES.

Subject analysis set title	FAS
Subject analysis set type	Full analysis

Subject analysis set description:

The full-analysis-set (FAS) included all randomized patients who received at least one dose of IMP and had at least one post-baseline assessment. The ITT analysis was based on the FAS. The FAS was considered primary analysis set for the efficacy analysis.

Subject analysis set title	PKS
Subject analysis set type	Per protocol

Subject analysis set description:

The pharmacokinetics evaluation set (PKS) includes all patients without any protocol deviations that could have interfered with the administration of the treatment or the evaluation of systemic concentrations of MP1032, who received at least one dose of IMP and who had any completed determination of MP1032 levels were included in the PKS.

Subject analysis set title	VCS
Subject analysis set type	Per protocol

Subject analysis set description:

The valid-cases-set (VCS) included all patients from the FAS, who completed the assessments of the co-primary endpoints without any protocol violation interfering with the precise evaluation of treatment efficacy and with sufficient exposure to IMP.

Subject analysis set title	PASI ≤ 15 (FAS)
Subject analysis set type	Sub-group analysis

Subject analysis set description:

This subgroup comprises all subjects out of the FAS set who had a baseline PASI score ≤ 15. Several study specific categories had been created for subgroup analyses including centers, age, sex, BMI, years of psoriasis, smoking, baseline PGA, baseline PASI and baseline CRP. However, only subgroups that showed relevant results are herewith provided as subject analysis set.

Subject analysis set title	Age > 40 (FAS)
Subject analysis set type	Sub-group analysis

Subject analysis set description:

This subgroup comprises all subjects out of the FAS set who were older than 40 years. Several study specific categories had been created for subgroup analyses including centers, age, sex, BMI, years of psoriasis, smoking, baseline PGA, baseline PASI and baseline CRP. However, only subgroups that showed relevant results are herewith provided as subject analysis set.

Subject analysis set title	BMI ≥ 30 (FAS)
Subject analysis set type	Sub-group analysis

Subject analysis set description:

This subgroup comprises all subjects out of the FAS set who had a body mass index ≥ 30. Several study specific categories had been created for subgroup analyses including centers, age, sex, BMI, years of psoriasis, smoking, baseline PGA, baseline PASI and baseline CRP. However, only subgroups that showed relevant results are herewith provided as subject analysis set.

End point title	Pharmacokinetics – Day 1: AUC(0,t) ^[6]
-----------------	---

End point description:

Non-compartment parameters:

- C_{max} is the maximum MP1032 concentration observed.
- t_{max} is the time point (effective) at which the maximum concentration (C_{max}) was observed.
- AUC(0,t) is the area under the concentration-time curve up to the last quantifiable sample drawn.

End point type	Secondary
----------------	-----------

End point timeframe:

Plasma samples were taken predose, and 15 minutes, 30 minutes, 1 hour, and 2 hours after the first dose.

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Placebo patients are not part of the PK analysis. However, respective plasma sampling has been performed in placebo patients as the study was blinded.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 October 2018	There are 3 changes in the protocol amendment. 1. The name from the responsible person for SAE notifications was changed. 2. The address from the PK samples was changed. 3. The number of PK sites for Germany and Poland was changed

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
