General information about the trial

Main objective of the trial:

To evaluate the anti-tumour effect after treatment with 0.45mg/kg Irofulven in combination prednisolone in patients who progressed on AR-targeted therapy (abiraterone acetate, enzalutamide or investigational AR-targeted agent) and docetaxel-pretreated metastatic castration-resistant prostate cancer and that were selected by the Irofulven DRP.

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki, adopted by the 18th World Medical Association (WMA) General Assembly, Helsinki, Finland, June 1964, and subsequent amendments and International Council for Harmonisation (ICH) guideline for Good Clinical Practice E6 (R1)(European Medicines Agency (EMA)/Committee for Medicinal Products for Human Use CHMP)/ICH/135/1995), including archiving of essential documents and the EU Clinical Trial Directive (CTD)2001/20/EC.
