Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 October 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 August 2020
Global end of trial reached?	Yes
Global end of trial date	30 October 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study will be to evaluate the efficacy of gefapixant (MK-7264) in reducing cough frequency as measured over a 24-hour period. It is hypothesized that at least one dose of gefapixant is superior to placebo in reducing coughs per hour (over 24 hours) at Week 24. This study will have a main 24-week treatment period and a 28-week extension period of treatment. Participants at selected sites and countries who complete the main and extension study periods may consent to participate in an observational, 3-month, Off-treatment Durability Study Period.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 March 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 33
Country: Number of subjects enrolled	Canada: 76
Country: Number of subjects enrolled	China: 4
Country: Number of subjects enrolled	Colombia: 100
Country: Number of subjects enrolled	Czechia: 45
Country: Number of subjects enrolled	Denmark: 26

Country: Number of subjects enrolled	United Kingdom: 184
Country: Number of subjects enrolled	United States: 219
Worldwide total number of subjects	1317
EEA total number of subjects	313

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	883
From 65 to 84 years	432
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

1317 participants were randomized to the 52-week treatment period, and 1314 participants received at least 1 dose of study intervention. After the main study, 122 participants continued in an optional Off-Treatment observational study period (no treatment).

Period 1

Period 1 title	52-week Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received dose-matched placebo tablets twice daily (BID) during the 24-week main study period and 28-week extension period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablet administered orally BID

Arm title	Gefapixant 15 mg BID
------------------	----------------------

Arm description:

Participants received a gefapixant 15 mg tablet and placebo tablet to match gefapixant 45 mg BID during the 24-week main study period and 28-week extension period.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablet administered orally BID

Investigational medicinal product name	Gefapixant 15 mg BID

Primary: Model-Based Geometric Mean Ratio (GMR) of 24-Hour Coughs per Hour at Week 24/Baseline

End point title	Model-Based Geometric Mean Ratio (GMR) of 24-Hour Coughs per Hour at Week 24/Baseline
End point description: 24-hour coughs per hour was defined as the average hourly cough frequency based on 24-hour sound recordings using a digital recording device (cough monitor). A longitudinal analysis of covariance (ANCOVA) model was applied to log-transformed cough data to determine geometric mean (GM) 24-hour coughs per hour at baseline and week 24. The GMR (Week 24 GM 24-hour coughs per hour divided by Baseline GM 24-hour coughs per hour) is reported. The population analyzed included all randomized participants who took at least 1 dose of study intervention, had available 24-hour cough data at baseline and at least one available post-baseline measurement during the treatment period.

Primary: Number of Participants Who Experienced At Least One Adverse Event (AE) During Treatment and Follow-up

End point title	Number of Participants Who Experienced At Least One Adverse Event (AE) During Treatment and Follow-up ^[3]
-----------------	--

End point description:

An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of a study intervention. The population analyzed included all randomized participants who received at least one dose of study intervention during the 52-week treatment period. Per protocol, participants in the optional off-treatment observational period were not included. 3 participants randomized to placebo group who took 1 or more incorrect dose(s) of study drug were counted in the higher dose group of gefapixant received: 2 participants were analyzed in the gefapixant 15 mg group and 1 was analyzed in the gefapixant 45 mg group.

End point type	Primary

Secondary: Percentage of Participants With a ≥ 1.3 Point Change From Baseline in the Leicester Questionnaire (LCQ) Total Score at Week 24

End point title	Percentage of Participants With a ≥ 1.3 Point Change From Baseline in the Leicester Questionnaire (LCQ) Total Score at Week 24
End point description:	
The 19-item LCQ assessed the impact of chronic cough in three health-related quality of life (HRQoL) domains (physical, social and psychological). The LCQ is calculated as a mean score for each domain ranging from 1 to 7, with a total score ranging from 3 to 21. Higher scores indicate better HRQoL. A clinically meaningful improvement from baseline in HRQoL was defined as ≥ 1.3 -point increase in the LCQ total score at Week 24. The percentage of participants (logistic regression model-based) with a ≥ 1.3 -point increase in the LCQ total score at Week 24 is presented. The population analyzed included all randomized participants who had taken at least 1 dose of study intervention, had available LCQ data at baseline, and at least one available post-baseline measurement in the treatment period.

Notes:

[10] - Comparison based on a logistic regression model that included treatment, visit, treatment-by-visit interaction, gender, region, baseline 24-hour coughs per hour and the interaction of baseline 24-hour coughs per hour as covariates.

Secondary: Percentage of Participants with ≤ -1.3 Point Change From Baseline of Mean Weekly Cough Severity Diary (CSD) Total Score at Week 24

End point title	Percentage of Participants with ≤ -1.3 Point Change From Baseline of Mean Weekly Cough Severity Diary (CSD) Total Score at Week 24
-----------------	---

End point description:

The 7-item CSD was used to record participants' daily cough frequency, cough intensity, and disruption due to cough. Each item was rated on an 11-point scale ranging from 0 (best) to 10 (worst); the total daily CSD score was the sum of these seven item scores (Min=0, Max=70). Mean weekly CSD total score was defined as the average of the mean total daily scores collected during the week prior to each visit. The percentage of participants (logistic regression model-based) with a ≤ -1.3 point change from baseline in CSD at Week 24 (or ≥ 1.3 point reduction from baseline) is reported. The population analyzed included all randomized participants who had taken at least 1 dose of study intervention, had available CSD data at baseline, and at least one available post-baseline measurement in the treatment period.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

On-Treatment Period: Up to Week 54; Off-Treatment (Off-Tx) Period: From Week 52 through Week 64 (approximately 12 weeks)

Adverse event reporting additional description:

AE reporting groups include all randomized participants who took ≥ 1 one dose of study drug. In the treatment period, 3 participants randomized to placebo who took ≥ 1 incorrect dose(s) of study drug were counted as follows: 2 participants were analyzed in the gefapixant 15 mg arm and 1 in the gefapixant 45 mg arm.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 December 2017	Amendment 01: Clarifications of eligibility criteria, schedule of assessments, study population, and formatting.
27 September 2018	Amendment 02: Primary reason for amendment was to clarify that individuals with co-morbid conditions associated with cough should receive appropriate treatment(s) for at least 2 months with continuance of cough prior to being eligible for participation in the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
