Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2023
Global end of trial reached?	Yes
Global end of trial date	31 August 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess benefits and harms of haloperidol in adult, critically ill patients with delirium in the ICU. The primary objective is to determine, if haloperidol treatment in ICU patients with delirium will increase the number of days alive out of the hospital within 90 days. This primary objective includes 90 days mortality and length of hospital stay within 90 days after randomisation.

Protection of trial subjects:

The enrollment of patients was predominantly allowed as an emergency procedure because all the patients lacked the capacity to provide consent owing to delirium. Consent or assent was obtained from a physician independent of the trial (who represented the patient as a legal guardian) before enrollment of the patient, after which oral and written informed consent to continue participation was obtained from a relative or an authorized representative of the patient and later from the patient after the capacity to provide informed consent had returned. If consent was withdrawn, the assigned haloperidol or placebo was discontinued, and permission was sought to continue collection of trial data for analysis in accordance with national regulations. An independent data and safety monitoring committee assessed safety in an interim analysis, which was performed when 500 patients had been followed for 90 days. The trial was approved by ethic committees, national health authorities and data protection agencies in particip

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	Denmark: 964
Country: Number of subjects enrolled	Finland: 28
Country: Number of subjects enrolled	Italy: 1
Worldwide total number of subjects	1000
EEA total number of subjects	993

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	302
From 65 to 84 years	652
85 years and over	46

Subject disposition

Recruitment

Recruitment details:

Patients 18 years of age or older who had been admitted to an ICU for an acute condition and had received a positive result on a screening test for delirium according to either the Confusion Assessment Method for the ICU (CAM-ICU)¹² or the Intensive Care Delirium Screening Checklist (ICDSC) were assessed for eligibility.¹³

Pre-assignment

Screening details:

Exclusion criteria

- Contraindications to haloperidol
- Habitual treatment with antipsychotics
- Permanently incompetent
- Delirium assessment non-applicable
- Withdrawal from active therapy
- Fertile women with a positive urin hCG
- Patient under coercive measures
- Patients suffering from delirium tremens.
- Consent according to natio

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Clinicians, patients, investigators, outcome assessors, statisticians, and members of the data and safety monitoring committee were unaware of the trial-group assignments. Haloperidol and placebo were contained in identical ampules with identical labeling. The solutions were colorless and indistinguishable from each other

Arms

Are arms mutually exclusive?	Yes
Arm title	Haloperidol

Arm description:

2,5mg haloperidol x 3 daily with as needed dosing up to a maximum of 20 mg.

Arm type	Experimental
Investigational medicinal product name	Haloperidol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

2,5mg haloperidol x 3 daily with possibility of as needed doses up to a maximum of 20mg daily.

Arm title	Placebo
Arm description:	
Normal saline	
Arm type	Placebo

Investigational medicinal product name	Normal saline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravascular use
Dosage and administration details:	
Corresponding to active drug	

Number of subjects in period 1	Haloperidol	Placebo
Started	510	490
Completed	501	486
Not completed	9	4
did not receive the intervention	9	4

End point values	Haloperidol	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	491	472		
Units: days				
arithmetic mean (confidence interval 95%)	35.8 (32.9 to 38.6)	32.9 (29.9 to 35.8)		

Statistical analyses

Statistical analysis title	Intention to treat
Statistical analysis description: All analyses were adjusted for stratification variables (trial site and delirium motor subtype). In the primary analysis, we used a linear-regression model to estimate the adjusted mean difference between the groups. Because of the nonnormal distribution, we bootstrapped 95% confidence intervals; 50,000 resampling iterations were used in the bootstrap.	
Comparison groups	Haloperidol v Placebo
Number of subjects included in analysis	963
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.22 ^[1]
Method	see comment
Parameter estimate	Mean difference (net)
Point estimate	2.9

Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.2
upper limit	7

Notes:

[1] - The Kryger Jensen and Lange16 test was used to estimate the P value because this test was designed for distributions of outcome results that show many patients with a value of zero.
