General information about the trial

Main objective of the trial:

To assess the safety of intravitreal Zimura™ administered in combination with Lucentis® in treatment naïve subjects with NVAMD

Protection of trial subjects:

The study was conducted in full compliance with the principles of the Declaration of Helsinki and in line with the principles outlined in the Guideline for Good Clinical Practice (GCP), the International Council for Harmonisation (ICH) Tripartite Guideline (May 1997). Before initiation of the study, the protocol and the subject informed consent provisions were reviewed and approved by the appropriate independent ethics committees (IECs) for each of the centers involved in the study. Study initiation at each site began only after receiving written approval from the IEC. Prior to study entry, all subjects were informed fully of the nature and aims of the study. Ample time was provided for the subjects to read the subject information sheet and ask any questions regarding the investigational drug. Subjects were informed that their participation was voluntary and that they could withdraw from the study at any time for any reason without incurring any penalty or withholding of treatment on the part of the investigator. Before receiving any treatment related to this study, all subjects provided their written informed consent.
