Clinical trial results:
A phase IIIb, open-label, local, multicenter study of the molecular features of postmenopausal women with hormone receptor-positive (HR+) HER2-negative advanced breast cancer on first-line treatment with ribociclib plus letrozole and, in patients with a PIK3CA mutation, on second-line treatment with alpelisib plus fulvestrant (BioItaLEE)

Summary

EudraCT number	2017-004176-62
Trial protocol	IT
Global end of trial date	11 December 2023

Results information

Result version number	v1 (current)
This version publication date	22 December 2024
First version publication date	22 December 2024

Trial information

Trial identification

Sponsor protocol code	CLEE011AIT01

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 December 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 December 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to identify circulating tumor DNA (ctDNA) alterations, how they evolve, and evaluate their possible association with clinical outcome in both first-line treatment with ribociclib and letrozole and second-line treatment with alpelisib and fulvestrant. Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 February 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 287
Worldwide total number of subjects	287
EEA total number of subjects	287

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	125
From 65 to 84 years	161

85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All inclusion and exclusion criteria were checked at screening.

Period 1

Period 1 title	Core Phase
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ribociclib+letrozole (Core Phase)

Arm description:

Ribociclib oral (3 weeks on/1 week off) in combination with oral once daily letrozole: 600 mg tablets ribociclib QD + 2.5 mg tablets letrozole QD

Arm type	Experimental
Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ribociclib oral (3 weeks on/1 week off) in combination with oral once daily letrozole: 600 mg tablets ribociclib QD + 2.5 mg tablets letrozole QD

Investigational medicinal product name	Ribociclib
Investigational medicinal product code	
Other name	LEE011
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ribociclib oral (3 weeks on/1 week off) in combination with oral once daily letrozole: 600 mg tablets ribociclib QD + 2.5 mg tablets letrozole QD

Number of subjects in period 1	Ribociclib+letrozole (Core Phase)
Started	287
Completed	184
Not completed	103
Adverse event, serious fatal	27
Other	2
Study terminated by sponsor	45
Lost to follow-up	14
Subject/guardian decision	15

Period 2	
Period 2 title	Extension Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms	
Arm title	Alpelisib+fulvestrant (Extension Phase)

Arm description:

Alpelisib 300 mg oral daily on a continuous dosing schedule in combination with fulvestrant 500 mg intramuscular on Days 1 and 15 of Cycle 1, and on Day 1 of each cycle thereafter in a 28-day cycle

Arm type	Experimental
Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Alpelisib 300 mg oral daily on a continuous dosing schedule in combination with fulvestrant 500 mg intramuscular on Days 1 and 15 of Cycle 1, and on Day 1 of each cycle thereafter in a 28-day cycle

Investigational medicinal product name	Alpelisib
Investigational medicinal product code	
Other name	BYL719
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Alpelisib 300 mg oral daily on a continuous dosing schedule in combination with fulvestrant 500 mg intramuscular on Days 1 and 15 of Cycle 1, and on Day 1 of each cycle thereafter in a 28-day cycle

Number of subjects in period 2[1]	Alpelisib+fulvestrant (Extension Phase)
Started	21
Completed	16
Not completed	5
Adverse event, serious fatal	3
Lost to follow-up	1
Subject/guardian decision	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: This arm included patients with PIK3CA mutations who entered the extension phase after treatment discontinuation.

Baseline characteristics

Reporting groups	
Reporting group title	Ribociclib+letrozole (Core Phase)
Reporting group description:	
Ribociclib oral (3 weeks on/1 week off) in combination with oral once daily letrozole: 600 mg tablets ribociclib QD + 2.5 mg tablets letrozole QD

Statistical analyses

No statistical analyses for this end point

Primary: Percent Change From Screening in Target Mutation Variant Allele Frequency (VAF)

End point title	Percent Change From Screening in Target Mutation Variant Allele Frequency (VAF)[2]

End point description:

The target mutation was defined as the hotspot mutation with the highest molecular frequency observed at screening excluding single nucleotide polymorphisms (SNPs, i.e., hotspot mutations observed at all timepoints with a minimum molecular frequency value of 30% and a variation coefficient greater than 0.15). The molecular frequency of target mutation at performed assessments during which the target mutation was not detected was assumed to be equal to 0%.

End point type	Primary

End point timeframe:

Up to approximately 5.7 years

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Not applicable.

Primary: Progression-Free Survival (PFS) by Cycle 1 Day 15 Complete Mutational Dynamic Change

End point title	Progression-Free Survival (PFS) by Cycle 1 Day 15 Complete Mutational Dynamic Change[5]

End point description:

PFS: Time (months) from start of the study treatment to first documented progression or death due to any cause, whichever came first. Kaplan-Meier estimates. Persistent Wild Type: Wild Type (or single nucleotide polymorphisms [SNPs] only) at screening without hotspot mutations at any later assessment. Confirmed cleared: Mutated, with 100% decrease in target mutation variant allele frequency (VAF) at C1D15 or at C2D1 also observed at FI. Unconfirmed cleared: Mutated that cleared or at C1D15 or at C2D1 that were not cleared at FI. Late cleared: Mutated without 100% decrease in target mutation VAF at C1D15 and at C2D1 with 100% decrease in target mutation VAF at FI. New mutated: Wild Type ([SNPs] only) at screening with hotspot mutations at C1D15 or C2D1. Late mutated: Wild Type patients (or SNPs only) at screening without hotspot mutations at C1D15 and C2D1 with hotspot mutations at FI. Confirmed mutated: Mutated without 100% decrease in target mutation VAF at any later assessment.

End point type	Primary

End point timeframe:

Up to approximately 5.7 years

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Secondary: Time to Progression (TTP)

End point title	Time to Progression (TTP)

End point description:

Time to progression (TTP) was defined as time from date of start of treatment to the date of event defined as the first documented progression or death due to underlying cancer.

End point type	Secondary

End point timeframe:

Core phase: up to approximately 5.7 years. Extension phase: up to approximately 1.6 years

End point values	Ribociclib+letrozole (Core Phase)			
Subject group type	Reporting group			
Number of subjects analysed	263			
Units: months				
median (confidence interval 95%)	30.42 (21.42 to 40.41)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With Best Overall Response Rate of Complete Response (CR) or Partial Response (PR)

End point title	Percentage of Participants With Best Overall Response Rate of Complete Response (CR) or Partial Response (PR)

End point description:

ORR was defined as the percentage of participants with a best overall response defined as complete response (CR) or partial response (PR): (CR+PR) per Response Evaluation Criteria in Solid Tumors (RECIST), v. 1.1. CR=Disappearance of all non-nodal target lesions. In addition, any pathological lymph nodes assigned as target lesions must have a reduction in short axis to < 10 mm; PR= At least a 30% decrease in the sum of diameter of all target lesions, taking as reference the baseline sum of diameters.

End point type	Secondary

End point timeframe:

Core phase: up to approximately 5.7 years. Extension phase: up to approximately 1.6 years

End point values	Ribociclib+letrozole (Core Phase)			
Subject group type	Reporting group			
Number of subjects analysed	236			
Units: percentage of participants				
median (confidence interval 95%)	38.56 (32.32 to 45.09)			

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Number of Evaluations of Hotspot Mutations and Non-hotspot Mutations Present in Both Liquid Biopsies and Tissue Samples at End of Treatment

End point title	Overall Number of Evaluations of Hotspot Mutations and Non-hotspot Mutations Present in Both Liquid Biopsies and Tissue Samples at End of Treatment

End point description:

Results data refer to the total number of evaluations (i.e. the number of participants in the biomarker analysis set with both valid baseline liquid biopsy and tissue sample multiplied by 39 considered genes). HM = hotspot-mutated.

End point type	Secondary

End point timeframe:

Up to approximately 5.7 years

End point values	Ribociclib+letrozole (Core Phase)			
Subject group type	Reporting group			
Number of subjects analysed	263			
Units: evaluations				
Liquid Biopsy HM, Tissue Sample HM	5			
Liquid Biopsy HM, Tissue Sample Not HM	1			
Liquid Biopsy Not HM, Tissue Sample HM	0			
Liquid Biopsy Not HM, Tissue Sample Not HM	150

No statistical analyses for this end point

Secondary: Percentage of Participants With Clinical Benefit Rate

End point title	Percentage of Participants With Clinical Benefit Rate

End point description:

Clinical benefit rate (CBR) was defined as the percentage of participants with a best overall response of complete response (CR), or partial response (PR) or an overall lesion response of stable disease (SD), lasting as per local review, for a duration of at least 24 weeks. Per RECIST v. 1.1, CR was defined as disappearance of all target lesions. PR was defined as at least a 30% decrease in the sum of the longest diameter of target lesions, taking as reference the baseline sum longest diameter. SD was defined as

neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for progressive disease (PD), taking as reference the smallest sum longest diameter since the treatment started.

End point type	Secondary

End point timeframe:

Core phase: up to approximately 5.7 years. Extension phase: up to approximately 1.6 years

End point values	Ribociclib+letrozole (Core Phase)			
Subject group type	Reporting group			
Number of subjects analysed	236			
Units: percentage of participants				
number (confidence interval 95%)	73.31 (67.18 to 78.84)			

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline Tumor Microenvironment Parameters to Progression of Disease During the Core and Extension Phases

End point title	Change From Baseline Tumor Microenvironment Parameters to Progression of Disease During the Core and Extension Phases

End point description:

End point type	Secondary

End point timeframe:

Up to approximately 5.7 years

End point values	Ribociclib+letrozole (Core Phase)			
Subject group type	Reporting group			
Number of subjects analysed	0[8]

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 July 2018	This amendment: updated number of patients, timing of interim analysis, definition of end of study (EOS); clarified the inclusion and exclusion criteria and updated the definition of patient population; updated the management of treatment cycles in case of drug interruption and timelines or frequency of some trial assessments; updated and clarified biological sample collection timelines and assessments; updated definition of biomarker analysis set (BAS) and timing of interim analysis; added the updated references.
28 May 2019	This amendment: updated the background and rationale; updated study design, treatment, visit schedule, and safety information with alpelisib for the Extension Phase; added the statistical methods and data analysis for the Extension Phase; added the updated references; added the guidelines for alpelisib treatment.
11 December 2019	This amendment: updated clinical experience and approval information of alpelisib; added SOLAR-1 pharmacokinetic analyses and data on food effect; updated the inclusion /exclusion criteria based on alpelisib IB edition 13; updated additional guidance on missed dose instructions and follow-up on potential drug-induced liver injury (DILI); updated guidance on dose interruption/modifications, management of adverse events (AEs) associated with the use of alpelisib, and guidance for follow-up on toxicities; added general information on managing concomitant medications; updated permitted concomitant medications to be used with caution, prohibited medications, and the use of bisphosphonates/ denosumab based on updated information in relation to alpelisib; updated the list of medications according to amendment.
19 April 2023	This amendment: defined the procedure for study exit and established the possible post-trial access for alpelisib; changed detail in study procedure related to the final study visit and introduced the mechanism to ensure therapeutic continuity.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results.

Notes:
