Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 July 2017
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 January 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To describe the safety profile after each and all doses of Sanofi Pasteur's DTaP-IPV-HB-PRP~T in Vietnamese infants and toddlers.

Protection of trial subjects:

All subjects that met all the study inclusion and none of the exclusion criteria, including one subject who did not meet an inclusion criterion, were randomized and vaccinated. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment were also available on site in case of any immediate allergic reactions.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 April 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Vietnam: 354
Worldwide total number of subjects	354
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	354
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Study subjects were enrolled in 1 centre in Vietnam from 20 April 2015 to 23 October 2015.

Pre-assignment

Screening details:

A total of 354 subjects who met all of the inclusion criteria and none of the exclusion criteria, including one subject who did not meet an inclusion criterion were randomized and vaccinated in this study.

Period 1

Period 1 title	DTaP-IPV-HB-PRP~T Vaccine (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	DTaP-IPV-HB-PRP~T Vaccine
------------------	---------------------------

Arm description:

Subjects received 3 doses of 0.5 mL DTaP-IPV-HB-PRP~T combined vaccine, intramuscularly, at 2, 3 and 4 months of age (Infant Series), followed by a booster dose approximately 12 months after the completion of the Infant Series (at 16 to 17 months of age).

Arm type	Experimental
Investigational medicinal product name	DTaP-IPV-HB-PRP~T Combined Vaccine
Investigational medicinal product code	
Other name	Hexaxim
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular injection into the anterolateral area of the right thigh.

Number of subjects in period 1	DTaP-IPV-HB-PRP~T Vaccine
Started	354
Subjects completed the Infant Series	352
Subjects completed Booster vaccination	349
Completed	346
Not completed	8
Consent withdrawn by subject	4
Protocol deviation	4

Baseline characteristics

Reporting groups

Reporting group title	DTaP-IPV-HB-PRP~T Vaccine
-----------------------	---------------------------

Reporting group description:

Subjects received 3 doses of 0.5 mL DTaP-IPV-HB-PRP~T combined vaccine, intramuscularly, at 2, 3 and 4 months of age (Infant Series), followed by a booster dose approximately 12 months after the completion of the Infant Series (at 16 to 17 months of age).

Reporting group values	DTaP-IPV-HB-PRP~T Vaccine	Total	
Number of subjects	354	354	
Age categorical Units: Subjects			

Age continuous Units: days arithmetic mean standard deviation	75.4 ± 8.6	-	
Gender categorical Units: Subjects			
Female	175	175	
Male	179	179	
Recruitment by cohort			

Subjects in this trial were randomized in a 1:1 ratio in 2 cohorts. All subjects in both cohorts received Sanofi Pasteur's DTaP-IPV-HB-PRP~T combined vaccine in a 3-dose Infant Series. Subjects from Cohort 1 provided blood samples for immunogenicity assessment and were evaluated for safety and immunogenicity. Subjects in Cohort 2 did not provide any blood samples for immunogenicity analysis and were evaluated for safety only.

Units: Subjects			
Cohort 1	178	178	
Cohort 2	176	176	

End points

End points reporting groups

Reporting group title	DTaP-IPV-HB-PRP~T Vaccine
Reporting group description:	
Subjects received 3 doses of 0.5 mL DTaP-IPV-HB-PRP~T combined vaccine, intramuscularly, at 2, 3 and 4 months of age (Infant Series), followed by a booster dose approximately 12 months after the completion of the Infant Series (at 16 to 17 months of age).	
Subject analysis set title	Group 3 A3L15
Subject analysis set type	Per protocol
Subject analysis set description:	
Subjects from Study A3L15 (NCT01105559 and 2011-004450-26), who had been given DTaP-IPV-HB-PRP~T vaccine at 6, 10, and 14 weeks of age following Hep B vaccination at birth, were included in this group for the non-inferiority analysis.	

Primary: Number of Subjects Reporting Solicited Injection Site Reactions (Pain, Erythema, Swelling) After Infant Series

End point title	Number of Subjects Reporting Solicited Injection Site Reactions (Pain, Erythema, Swelling) After Infant Series ^[1]
End point description:	
A solicited reaction was an AE prelisted in the electronic case report from (eCRF) and considered to be related to vaccination. Injection site reactions: pain (Grade 3: Cried when injected limb was moved, or the movement of the injected limb was reduced), erythema and swelling (Grade 3: ≥ 50 mm). Number of subjects with any solicited injection-site reaction and Grade 3 solicited injection-site reactions were reported. Analysis was performed on safety analysis set after infant series, which included all subjects who received at least 1 dose of infant series vaccine.	
End point type	Primary
End point timeframe:	
Within 7 days after any vaccination	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint is descriptive in nature, no statistical analysis is provided.

End point values	DTaP-IPV-HB-PRP~T Vaccine			
Subject group type	Reporting group			
Number of subjects analysed	354			
Units: subjects				
Any Injection site pain	205			
Grade 3 Injection site pain	2			
Any Injection site erythema	113			
Grade 3 Injection site erythema	6			
Any Injection site swelling	47			
Grade 3 Injection site swelling	5			

Statistical analyses

No statistical analyses for this end point

Primary: Number of Subjects Reporting Solicited Systemic Reactions (Pyrexia, Vomiting, Crying, Somnolence, Decreased Appetite, Irritability) After Infant Series

End point title	Number of Subjects Reporting Solicited Systemic Reactions (Pyrexia, Vomiting, Crying, Somnolence, Decreased Appetite, Irritability) After Infant Series ^[2]
-----------------	--

End point description:

A solicited reaction was an AE prelisted in eCRF and considered to be related to vaccination. Systemic reactions: pyrexia (Grade 3: >39.5 degree Celsius), vomiting (Grade 3: >= 6 episodes per 24 hours), crying (Grade 3: >3 hours), somnolence (Grade 3: Sleeping most of the time/difficult to wake up), decreased appetite (Grade 3: Refuses >=3 feeds/meals or most feeds/meals) & irritability (Grade 3: Inconsolable). Number of subjects with any systemic reaction and Grade 3 systemic reactions were reported. Analysis was performed on safety analysis set after infant series. Here, "n" signifies number of subjects with available data for each category.

End point type	Primary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited reactions were collected up to Day 7 after each injection, non-serious unsolicited adverse events (AEs) were collected up to Day 30 after each injection, and serious AEs were collected throughout the study period.

Adverse event reporting additional description:

Solicited reaction: AE prelisted in eCRF, considered related to vaccination. A solicited reaction was therefore, an adverse drug reaction observed, reported under conditions (nature and onset) prelisted in the eCRF. Unsolicited AE: an observed AE that does not fulfill conditions prelisted in eCRF in terms of symptom and/or onset post-vaccination.

Assessment type	Systematic

Metabolism and nutrition disorders Decreased Appetite subjects affected / exposed occurrences (all)	108 / 354 (30.51%) 148	53 / 349 (15.19%) 53	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 March 2014	<ul style="list-style-type: none">• A brief presentation of the commercialization status of hexavalent vaccines in the world and the advantages of the Sanofi Pasteur's hexavalent vaccine, if any, over other commercialized combined vaccines from Italy or United States was added in the Introduction section.• Since it was possible that the number of enrolled subjects was not achieved, the rule of three could be used in data analyses and this had been briefly explained.• Clarification on the fact that the insurance coverage cases at the end of study involvement for all subjects, with the exception of insurance coverage for subjects who reported an SAE during the trial that was determined to be related to study vaccines by the Investigator (insurance coverage was continued for these subjects until the SAE is resolved).
25 August 2014	<ul style="list-style-type: none">• A booster dose was added to evaluate Ab persistence after 1 year.• A non-inferiority test comparing the immune response to all antigens induced by the study vaccine in Vietnam versus the response outside Vietnam was added.• The booster objective was added.• A booster endpoint was added.
16 February 2016	<ul style="list-style-type: none">• A new Regional Director Of Medical Affairs was appointed.• The timelines were updated.• Clarification on the fact that reportable medications were to be collected in the CRF from the day of each vaccination up to the end of the safety follow-up, and that there was no collection between V4 and V5.• Restricted use therapies and non-authorized therapies were not to be collected anymore.
07 March 2016	Correction and clarification of the booster endpoints for PT and FHA were made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
