

Clinical trial results:

A Phase 2 Open-Label Single-Arm Study to Evaluate the Efficacy and Safety of Loncastuximab Tesirine in Patients with Relapsed or Refractory Diffuse Large B-Cell Lymphoma (DLBCL) (LOTIS-2)

Summary

EudraCT number	2017-004288-11
Trial protocol	GB IT
Global end of trial date	09 August 2022

Results information

Result version number	v1 (current)
This version publication date	19 August 2023
First version publication date	19 August 2023

Trial information

Trial identification

Sponsor protocol code	ADCT-402-201
-----------------------	--------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03589469
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 September 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 August 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the efficacy of single agent loncastuximab tesirine in participants with relapsed or refractory diffuse large B-cell lymphoma (r/r DLBCL).

Protection of trial subjects:

This study was conducted in compliance with the Declaration of Helsinki and with Good Clinical Practices.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 August 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 31
Country: Number of subjects enrolled	Italy: 53
Country: Number of subjects enrolled	United States: 59
Country: Number of subjects enrolled	Switzerland: 2
Worldwide total number of subjects	145
EEA total number of subjects	53

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	65

From 65 to 84 years	78
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were enrolled at 28 study sites in Italy, Switzerland, the United Kingdom, and the United States from 01 August 2018 to 09 August 2022.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Loncastuximab Tesirine
-----------	------------------------

Arm description:

Participants received loncastuximab tesirine as an intravenous (IV) infusion over 30 minutes on Day 1 of each cycle (every 3 weeks) at a dose of 150 µg/kg once every 3 weeks (Q3W) for 2 cycles, then 75 µg/kg Q3W for subsequent cycles for up to one year or until disease progression, unacceptable toxicity, or other discontinuation criteria, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Loncastuximab tesirine
Investigational medicinal product code	ADCT-402
Other name	Zynlonta
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

intravenous infusion

Number of subjects in period 1	Loncastuximab Tesirine
Started	145
Completed	11
Not completed	134
Physician decision	20
Consent withdrawn by subject	8
Death	97
Miscellaneous	1
Lost to follow-up	8

Baseline characteristics

Reporting groups

Reporting group title	Loncastuximab Tesirine
-----------------------	------------------------

Reporting group description:

Participants received loncastuximab tesirine as an intravenous (IV) infusion over 30 minutes on Day 1 of each cycle (every 3 weeks) at a dose of 150 µg/kg once every 3 weeks (Q3W) for 2 cycles, then 75 µg/kg Q3W for subsequent cycles for up to one year or until disease progression, unacceptable toxicity, or other discontinuation criteria, whichever occurred first.

End points

End points reporting groups

Reporting group title	Loncastuximab Tesirine
Reporting group description: Participants received loncastuximab tesirine as an intravenous (IV) infusion over 30 minutes on Day 1 of each cycle (every 3 weeks) at a dose of 150 µg/kg once every 3 weeks (Q3W) for 2 cycles, then 75 µg/kg Q3W for subsequent cycles for up to one year or until disease progression, unacceptable toxicity, or other discontinuation criteria, whichever occurred first.	

Primary: Overall Response Rate (ORR)

End point title	Overall Response Rate (ORR) ^[1]
End point description: ORR, as determined by central review according to the 2014 Lugano classification, defined as the percentage of participants with a best overall response (BOR) of complete response (CR) or partial response (PR). All-treated population - all participants who received at least 1 dose of treatment.	
End point type	Primary
End point timeframe: Up to 21.5 months	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No additional statistical analyses were pre-specified for this endpoint.

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	145			
Units: percentage of participants				
number (confidence interval 95%)	48.3 (39.9 to 56.7)			

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)
End point description: DOR defined as the time from the first documentation of tumor response to disease progression or death. Participants in the all-treated population who achieved a CR or PR. Values of "99999" indicate the upper confidence interval could not be calculated due to insufficient number of participants with events.	
End point type	Secondary
End point timeframe: Up to 39 months	

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	70			
Units: months				
median (confidence interval 95%)	13.37 (6.87 to 99999)			

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-free Survival (PFS)

End point title	Progression-free Survival (PFS)
End point description: PFS was defined as the time between start of treatment and the first documentation of recurrence, progression, or death. All-treated population - all participants who received at least 1 dose of treatment.	
End point type	Secondary
End point timeframe: Up to 40 months	

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	145			
Units: months				
median (confidence interval 95%)	4.93 (2.89 to 8.31)			

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
End point description: OS was defined as the time between the start of treatment and death from any cause. All-treated population - all participants who received at least 1 dose of treatment.	
End point type	Secondary
End point timeframe: Up to 43 months	

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	145			
Units: months				
median (confidence interval 95%)	9.53 (6.74 to 11.47)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants Who Experience Treatment-emergent Adverse Events (TEAEs)

End point title	Number of Participants Who Experience Treatment-emergent Adverse Events (TEAEs)
-----------------	---

End point description:

An adverse event (AE) was defined as any untoward medical occurrence in a patient or clinical investigation participant administered a pharmaceutical product that did not necessarily have to have a causal relationship with treatment. A TEAE was an adverse event with an onset that began or worsened on or after the first dose date and until 30 days after the last dose date, or start of a new anticancer therapy/procedure, whichever came earlier. TEAE assessments also included those per the Common Terminology Criteria for Adverse Events (CTCAE) Version 4.0 Grade ≥ 3 AEs and serious TEAEs.

AEs were graded using CTCAE version 4 and according to the following: Grade 1 = mild AE, Grade 2 = Moderate AE, Grade 3 = a severe AE, Grade 4 = life-threatening AE, and Grade 5 = death due to AE. For events not listed in the CTCAE criteria, the same grading was used. All-treated population - all participants who received at least 1 dose of treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 599 days

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	145			
Units: participants				
Any TEAE	143			
Grade ≥ 3 TEAE	107			
Serious TEAE	57			

Statistical analyses

No statistical analyses for this end point

Secondary: Relapse-free Survival (RFS)

End point title	Relapse-free Survival (RFS)
-----------------	-----------------------------

End point description:

RFS was defined as the time from the documentation of CR to disease progression or death. Participants in the all-treated population who achieved CR.

Values of "99999" indicate the median, lower and upper confidence interval could not be calculated due to insufficient number of participants with events.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 39 months

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	36			
Units: months				
median (confidence interval 95%)	99999 (99999 to 99999)			

Statistical analyses

No statistical analyses for this end point

Secondary: Complete Response (CR) Rate

End point title	Complete Response (CR) Rate
-----------------	-----------------------------

End point description:

CR rate defined as the percentage of treated participants with a BOR of CR. All-treated population - all participants who received at least 1 dose of treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 39 months

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	145			
Units: percentage of participants				
number (confidence interval 95%)	24.8 (18.0 to 32.7)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With Clinically Significant Changes From Baseline in Clinical Laboratory Tests

End point title	Number of Participants With Clinically Significant Changes From Baseline in Clinical Laboratory Tests
-----------------	---

End point description:

Clinical laboratory tests included hematology and chemistry. Clinically significant changes were determined by the Investigator. All-treated population - all participants who received at least 1 dose of treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to 599 days

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	145			
Units: participants	83			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With Clinically Significant Change From Baseline in Vital Signs

End point title	Number of Participants With Clinically Significant Change From Baseline in Vital Signs
-----------------	--

End point description:

Vital sign measurements included arterial blood pressure, heart rate, respiratory rate, and body temperature. Clinical significance was determined by the investigator. All-treated population - all participants who received at least 1 dose of treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to 599 days

End point values	Loncastuximab Tesirine			
Subject group type	Reporting group			
Number of subjects analysed	145			
Units: participants	0			

Statistical analyses

No statistical analyses for this end point

Secondary: Eastern Cooperative Oncology Group (ECOG) Performance Status at Baseline and End of Treatment

End point title	Eastern Cooperative Oncology Group (ECOG) Performance Status at Baseline and End of Treatment
-----------------	---

End point description:

ECOG (Eastern Cooperative Oncology Group) Performance Status is scored on a 6-point scale where higher scores indicate a worse outcome. ECOG scores include the following:

- 0 = fully active, able to carry on all pre-disease performance without restriction
- 1 = restricted in physically strenuous activity but ambulatory and able to carry out work of a light or sedentary nature, e.g., light house work, office work
- 2 = ambulatory and capable of all self-care but unable to carry out any work activities; up and about more than 50% of waking hours
- 3 = capable of only limited self-care; confined to bed or chair more than 50% of waking hours
- 4 = completely disabled; cannot carry on any self-care; totally confined to bed or chair
- 5 = dead.

All-treated population - all participants who received at least 1 dose of treatment. Results are presented for participants with data available for analysis at end of treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline and end of treatment (up to 599 days)

End point values	Loncastuximab Tesirine

Secondary: Change From Baseline Score in the EuroQol-5 Dimensions-5 Levels (EQ-5D-5L) Visual Analogue Scale (VAS)

End point title	Change From Baseline Score in the EuroQol-5 Dimensions-5 Levels (EQ-5D-5L) Visual Analogue Scale (VAS)
-----------------	--

End point description:

EQ-5D-5L is designed as an international, standardized, instrument for describing and evaluating quality of life (QoL). In the EQ-5D-5L VAS participants are asked to indicate their health state today on a VAS with the endpoints labeled 'the best health you can imagine' (score 100) and 'the worst health you can imagine' (score 0).

A higher score on the VAS indicates better health related QoL. A positive change from baseline indicates an improvement in health related QoL. Patient reported outcome (PRO) population. Only participants with data available for analysis are included. Number of subjects analysed represents all participants who contributed data to this assessment, though not all participants contributed data to each time point.

Values of "99999" indicate standard deviation could not be calculated as n = 1.

Secondary: Change From Baseline Score in the Functional Assessment of Cancer Therapy - Lymphoma (FACT-Lym) - Lymphoma Subscale (LymS)

End point title	Change From Baseline Score in the Functional Assessment of Cancer Therapy - Lymphoma (FACT-Lym) - Lymphoma Subscale (LymS)
-----------------	--

End point description:

Composed of the Functional Assessment of Cancer Therapy - General (FACT-G) plus the 15-item LymS. The FACTG questionnaire contains 27 items covering 4 core health related quality of life (QoL) subscales: Physical Wellbeing (7 items), Social/Family Wellbeing (7), Emotional Wellbeing (6), and Functional Wellbeing (7). The LymS addresses issues including pain, itching, night sweats, trouble sleeping, fatigue and trouble concentrating. Score range for the LymS was 0 - 60, where a higher score indicates less symptoms. The LymS score is reported. A positive change from baseline indicates an improvement in health related QoL. PRO population. Only participants with data available for analysis are included. Number of subjects analysed represents all participants who contributed data to this assessment, though not all participants contributed data to each time point.

Values of "9999" indicate n = 0; "99999" indicate standard deviation could not be calculated as n = 1.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 43 months

Adverse event reporting additional description:

All non-serious AEs at a frequency threshold of $\geq 5\%$ and all SAEs, regardless of relationship to study drug, were collected from the time the participant signs the ICF until 30 days after the last dose of study drug or start of new anti-cancer therapy, whichever is earlier; thereafter, only related SAEs were collected, with two exceptions.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Loncastuximab Tesirine
-----------------------	------------------------

Reporting group description:

Participants received loncastuximab tesirine as an IV infusion over 30 minutes on Day 1 of each cycle (every 3 weeks) at a dose of 150 µg/kg once Q3W for 2 cycles, then 75 µg/kg Q3W for subsequent cycles for up to one year or until disease progression, unacceptable toxicity, or other discontinuation criteria, whichever occurred first.

subjects affected / exposed	11 / 145 (7.59%)		
occurrences (all)	14		
Hyponatraemia			
subjects affected / exposed	9 / 145 (6.21%)		
occurrences (all)	10		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 April 2018	<p>The original protocol was finalized on 09 Mar 2018 and was amended before implementation in response to United States Food and Drug Administration recommendations.</p> <p>The purposes of the amendment were the following:</p> <ul style="list-style-type: none">- The study design was changed to a single cohort with the primary endpoint being ORR in all-treated participants, resulting in changes to primary and secondary objectives and endpoints, and statistical considerations.- For eligibility, pathologic diagnosis was clarified to align with the 2016 World Health Organization classification, the requirement for participants to be ineligible or have failed stem cell transplant (SCT) was removed (as the Agency felt that loncastuximab tesirine was potentially suitable for third line therapy in participants who were potentially eligible for SCT), and the specific requirement for rituximab therapy was deleted as it was expected that all participants would have received this in at least 1 prior line of therapy.- For participants whose disease was not positron-emission tomography (PET)-avid, bone marrow biopsy was added as part of baseline staging and disease assessment if clinically appropriate to fully align with the 2014 Lugano Classification.- Safety follow-up was extended to 180 days after transplant for participants who had responded to loncastuximab tesirine and gone on to SCT to monitor for possible increased transplant-related toxicity in participants who had been treated with loncastuximab tesirine.
24 September 2018	<p>The purposes of the amendment were the following:</p> <ul style="list-style-type: none">- Participants with bulky disease (defined as at least 1 lymph node ≥ 10 cm in longest diameter) were excluded based on analysis of Phase 1 data showing that these participants had an ORR of 11%. Based on an interim analysis this was the ORR at the time of this analysis.- The inclusion criterion regarding hepatic function was revised to no longer allow participants with alanine aminotransferase, aspartate aminotransferase, and gamma-glutamyl transferase $\leq 5 \times$ upper limit of normal if there was liver involvement, to be consistent with the requirement to hold the dose of loncastuximab tesirine for participants with Grade ≥ 2 liver function test abnormalities as specified in Section 9.4.5.1.2.- Participants who were clinically benefiting were allowed to continue treatment beyond 1 year with Sponsor review and approval.- A requirement for dose discontinuation for dose delays > 5 weeks due to toxicity at least possibly related to loncastuximab tesirine was added.- The requirement for IV contrast for PET-computer tomography (CT) was removed and the type and timing of efficacy assessments were clarified.
09 July 2019	<p>The purposes of the amendment were the following:</p> <ul style="list-style-type: none">- The text was updated to include information regarding monitoring for extravasation during or after loncastuximab tesirine infusion because of updated safety information.- Efficacy assessments were updated to allow for capture of response information during the follow-up period for participants who received chimeric antigen receptor T-cell (CAR-T) therapy after loncastuximab tesirine treatment.- AE/serious AE reporting requirements for participants who received CAR-T therapy after loncastuximab tesirine discontinuation were added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
