

Clinical trial results:

A phase II, multicentre, randomised, double-blind, double-dummy, active-controlled, 3-way cross-over study to evaluate the efficacy of CHF 5993 administered via Dry Powder Inhaler (DPI) versus CHF 5993 via pressurized Metered Dose Inhaler (pMDI) and CHF 1535 pMDI in patients with chronic obstructive pulmonary disease

Summary

EudraCT number	2017-004405-41

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 November 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 March 2019
Global end of trial reached?	Yes
Global end of trial date	06 March 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of the trial were:

- To demonstrate the non-inferiority between CHF 5993 DPI and CHF 5993 pMDI in terms of forced expiratory volume in the 1st second (FEV1) area under the curve between 0 and 12 hours (AUC0-12h) normalised by time on Day 28;
- To demonstrate the non-inferiority between CHF 5993 DPI and CHF 5993 pMDI in terms of trough FEV1 at 24 hours on Day 28.*

*Minor changes to the wording of these objectives for clarification purposes, which did not alter the meaning, were made in this results posting compared to the protocol.

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki, Good Clinical Practice guidelines and all other requirements of local laws.

At all visits from screening to the end of the treatment period, concomitant medications and adverse events (AEs) were recorded and physical examination of patients was carried out (concomitant medications and AEs were additionally recorded at the follow-up call). Vital signs (pre-dose) and 12-lead electrocardiograms (ECGs) (pre-dose at screening, pre- and post-dose at all visits during the treatment period) were recorded. Spirometry was performed (pre- and post-bronchodilator FEV1 and forced vital capacity [FVC] at screening and pre-dose and serial post-dose spirometry [FEV1 and FVC] at randomisation and all post-randomisation visits during the treatment period).

Patients completed the diary card at home daily from screening until the end of the treatment period. The St. George's Respiratory Questionnaire (SGRQ) was completed at randomisation and at all post-randomisation visits during the treatment period.

Blood collection for routine haematology and blood chemistry was performed at screening and again at the end of the treatment period. Heart rate, Fridericia-corrected QT interval, PR interval and QRS interval were evaluated on 12-lead ECGs.

Patients were provided with salbutamol as rescue medication.

Background therapy: -

Evidence for comparator:

CHF 5993 DPI (beclometasone dipropionate [BDP]/formoterol fumarate [FF]/glycopyrronium bromide [GB] 100/6/12.5 µg/inhalation) was compared to CHF 5993 pMDI (BDP/FF/GB 100/6/12.5 µg/actuation) and to CHF 1535 pMDI (BDP/FF 100/6 µg/actuation).

CHF 5993 pMDI was chosen as reference treatment as it contains the same active ingredients and is currently authorised as a maintenance treatment in adult patients with COPD who are not adequately treated by combinations of either an inhaled corticosteroid (ICS) and a long-acting β2 agonist (LABA) or a LABA and a long-acting muscarinic antagonist (LAMA). The aim of the study was to demonstrate non-inferiority of CHF 5993 DPI to CHF 5993 pMDI in accordance with the Orally Inhaled Products guideline.

Superiority of the triple therapy CHF 5993 pMDI (ICS/LABA/LAMA) to double therapy with CHF 1535 pMDI (ICS/LABA) was tested to demonstrate assay sensitivity. CHF 1535 pMDI was chosen as reference treatment as it is currently marketed for the treatment of patients with COPD who have significant symptoms despite long-acting bronchodilator therapy.

Actual start date of recruitment	15 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 123
Country: Number of subjects enrolled	Bulgaria: 72
Country: Number of subjects enrolled	Czech Republic: 34
Country: Number of subjects enrolled	Germany: 25
Country: Number of subjects enrolled	Hungary: 105
Country: Number of subjects enrolled	Italy: 7

EEA total number of subjects	366

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	175
From 65 to 84 years	191
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Overall, 449 patients were screened; 366 patients were randomised to one of six treatment sequences (Sequence ABC [n=63], Sequence CAB [n=60], Sequence BCA [n=60], Sequence ACB [n=62], Sequence BAC [n=60], Sequence CBA [n=61] [note: A=CHF 5993 DPI, B=CHF 5993 pMDI, C=CHF 1535 pMDI]); 342 patients completed the study.

Pre-assignment

Screening details:

At screening, no more than 7 days after a pre-screening visit, inclusion/exclusion criteria were assessed. A total of 83 patients failed screening due to: inclusion/exclusion criteria (66 patients), consent withdrawal (7 patients), other reasons (5 patients), adverse events (3 patients), death (1 patient) and lost to follow-up (1 patient).

Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

At randomisation, patients were assigned to one of six treatment sequences using a balanced block randomisation scheme and a pre-established randomisation list.

The randomisation list was provided to the labelling facility but was not available to patients, investigators, monitors or employees of the centre involved in the management of the study before unblinding of the data, unless in case of emergency.

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence ABC

Arm description:

Patients were randomised to receive three different treatments during three treatment periods. Treatment periods each lasted 4 weeks (+/- 2 days) and were separated by 2-week wash-out periods. Treatment A=CHF 5993 DPI; Treatment B=CHF 5993 pMDI; Treatment C=CHF 1535 pMDI.

Arm type	Experimental
Investigational medicinal product name	CHF 5993 DPI
Investigational medicinal product code	CHF 5993 DPI
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Study treatment kits for each period contained two DPI inhalers and two pMDI inhalers. Within the same period, patients receiving CHF 5993 DPI active were administered CHF 5993 pMDI placebo. Similarly, patients receiving CHF 5993 pMDI or CHF 1535 pMDI were administered CHF 5993 DPI placebo. Thus, each day during the treatment periods patients administered 2 inhalations from the first DPI and 2 puffs from the first pMDI in the morning, then 2 inhalations from the second DPI and 2 puffs from the second pMDI in the evening. Treatment A=CHF 5993 DPI (2 inhalations of CHF 5993 DPI and 2 puffs of CHF 5993 pMDI placebo twice daily [total daily dose: BDP/FF/GB 400/24/50 µg]); Treatment B=CHF 5993 pMDI (2 puffs of CHF 5993 pMDI and 2 inhalations of CHF 5993 DPI placebo twice daily [total daily dose: BDP/FF/GB 400/24/50 µg]); Treatment C=CHF 1535 pMDI (2 puffs of CHF 1535 pMDI and 2 inhalations of CHF 5993 DPI placebo twice daily [total daily dose: BDP/FF 400/24 µg]).

Investigational medicinal product name	CHF 5993 pMDI
Investigational medicinal product code	CHF 5993 pMDI
Other name

Method	Regression, Logistic
Parameter estimate	Odds ratio (OR)
Point estimate	3.126

Confidence interval	
level	95 %
sides	2-sided
lower limit	2.002
upper limit	4.88

Statistical analysis title	CHF 5993 DPI v CHF 1535 pMDI ITT
-----------------------------------	----------------------------------

Statistical analysis description:

The value N=711, shown below, is generated automatically and is due to innate error of the EudraCT database system.

Comparison groups	A) CHF 5993 DPI - ITT v C) CHF 1535 pMDI - ITT
Number of subjects included in analysis	711
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Regression, Logistic
Parameter estimate	Odds ratio (OR)
Point estimate	3.216
Confidence interval	
level	95 %
sides	2-sided
lower limit	2.064
upper limit	5.01

Secondary: Change from baseline in SGRQ total score on Day 28 - ITT set

End point title	Change from baseline in SGRQ total score on Day 28 - ITT set
-----------------	--

End point description:

SGRQ is a questionnaire developed to measure health in chronic airflow limitation. The total score for SGRQ was calculated from several domains (symptoms, impacts and activity). Lower scores correspond to better health.

The change from baseline in SGRQ total score on Day 28 was analysed using the same model as for FEV1 AUC0-12h normalised by time on Day 28, except that SGRQ total score was included as a covariate instead of baseline FEV1.

End point type	Secondary
----------------	-----------

End point timeframe:

The change from baseline in SGRQ total score was analysed on Day 28.

End point values	A) CHF 5993 DPI - ITT	B) CHF 5993 pMDI - ITT	C) CHF 1535 pMDI - ITT	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	337 ^[25]	340 ^[26]	333 ^[27]	
Units: points				
least squares mean (confidence interval 95%)	-0.82 (-1.56 to -0.08)	-1.26 (-1.99 to -0.53)	0.26 (-0.49 to 1.00)	

Notes:

[25] - Number of patients in the ITT set = 354; Number of patients with available data = 337.

[26] - Number of patients in the ITT set = 357; Number of patients with available data = 340.

[27] - Number of patients in the ITT set = 357; Number of patients with available data = 333.

Statistical analyses

Statistical analysis title	CHF 5993 DPI v CHF 5993 pMDI ITT
Statistical analysis description: The value N=677, shown below, is generated automatically and is due to innate error of the EudraCT database system.	
Comparison groups	A) CHF 5993 DPI - ITT v B) CHF 5993 pMDI - ITT
Number of subjects included in analysis	677
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	= 0.41
Method	ANCOVA
Parameter estimate	Least square mean difference
Point estimate	0.43
Confidence interval	
level	95 %

Statistical analysis description:

The value N=670, shown below, is generated automatically and is due to innate error of the EudraCT

database system.

Comparison groups	A) CHF 5993 DPI - ITT v C) CHF 1535 pMDI - ITT
Number of subjects included in analysis	670
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.042
Method	ANCOVA
Parameter estimate	Least square mean difference
Point estimate	-1.08
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.12
upper limit	-0.04

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The reporting period for AEs was from the signature of the informed consent form until the patient's participation in the study ended.

Adverse event reporting additional description:

Treatment-emergent AEs (TEAEs) were defined as all AEs that started on or after date of first randomised study treatment intake and on or before 14 days after the date of the last randomised study treatment intake. TEAEs were assigned to the last study treatment received.

Assessment type	Systematic
