

## Clinical trial results:

**A Randomized, Open-Label, Multicenter, Phase 3 Study to Evaluate the Efficacy and Safety of Avelumab in Combination With Chemotherapy Followed by Maintenance Therapy of Avelumab in Combination With the Poly (Adenosine Diphosphate [ADP]-Ribose) Polymerase (PARP) Inhibitor Talazoparib in subjects With Previously Untreated Advanced Ovarian Cancer (JAVELIN Ovarian PARP 100)**

### Summary

EudraCT number	2017-004456-30
Trial protocol	SK CZ HU BE GB EE HR IT
Global end of trial date	22 December 2021

### Results information

Result version number	v1 (current)
This version publication date	23 December 2022
First version publication date	23 December 2022

### Trial information

#### Trial identification

Sponsor protocol code	B9991030
-----------------------	----------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03642132
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 December 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 December 2021
Global end of trial reached?	Yes
Global end of trial date	22 December 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate that avelumab in combination with platinum-based chemotherapy followed by avelumab plus talazoparib maintenance is superior to platinum based chemotherapy plus bevacizumab followed by bevacizumab maintenance in prolonging progressive-free survival(PFS) in subjects with advanced ovarian cancer with defects in DNA damage repair (DDR+).

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of trial subjects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 July 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Italy: 9
Country: Number of subjects enrolled	Japan: 1
Country: Number of subjects enrolled	Korea, Republic of: 6
Country: Number of subjects enrolled	Russian Federation: 2
Country: Number of subjects enrolled	Singapore: 1
Country: Number of subjects enrolled	Taiwan: 4
Country: Number of subjects enrolled	United States: 53
Worldwide total number of subjects	79
EEA total number of subjects	12

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	49
From 65 to 84 years	30
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

As of 19 March 2019, the sponsor decided to stop enrollment/randomization in the study. As only 11% projected enrollment was met at the time of enrollment stop, the original study endpoints are no longer applicable and/or feasible; only the Safety, PK and Immunogenicity Analysis were done and these data are included in this report.

### Pre-assignment

Screening details:

A total of 104 subjects were screened. Seventy-nine subjects completed screening and were randomized in the study prior to study discontinuation. Seventy-six subjects received study treatment across the 3 arms

### Period 1

Period 1 title	Chemotherapy Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Chemotherapy +Avelumab -> Avelumab + Talazoparib

Arm description:

In chemotherapy period, subjects received paclitaxel 175 mg/m<sup>2</sup> intravenously(IV) over 3 hours followed by carboplatin area under the concentration (AUC) 5 or 6 IV over 15-60 minutes on Days 1 of each 3 week cycle for 6 cycles along with avelumab 800 mg administered IV on Day 1 of each 3-week cycle for 6 cycles. In maintenance period, subjects received avelumab 800 mg administered IV on Days 1, 15 and 29 of each 6-week cycle in combination with talazoparib 0.75 mg self-administered orally once per day. A cycle was defined as 3 weeks (21 days) in the chemotherapy period and 6 weeks (42 days) in the maintenance period, respectively.

Arm type	Experimental
Investigational medicinal product name	Avelumab (MSB0010718C) Solution for Infusion, 20 mg/mL (10 mL/vial)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Avelumab 800 mg administered intravenously on Day 1 of each 3-week cycle for 6 cycles.

<b>Arm title</b>	Chemotherapy -> Talazoparib
------------------	-----------------------------

Arm description:

In chemotherapy period, subjects received paclitaxel 175 mg/m<sup>2</sup> IV over 3 hours followed by carboplatin AUC 5 or 6 IV over 15-60 minutes on Days 1 of each 3-week cycle for 6 cycles. In maintenance period, subjects received talazoparib 0.75 mg self-administered orally once a day, every day of each 6-week cycle.

Arm type	No intervention
No investigational medicinal product assigned in this arm	
<b>Arm title</b>	Chemotherapy + Bevacizumab -> Bevacizumab

Arm description:

In chemotherapy period, subjects received paclitaxel 175 mg/m<sup>2</sup> IV over 3 hours followed by carboplatin AUC 5 or 6 IV over 15-60 minutes on Day 1 of each 3-week cycle for 6 cycles along with Bevacizumab 15 mg/kg IV on Day 1 of each 3-week cycle beginning with Cycle 2 for adjuvant subjects, and for neoadjuvant subjects, bevacizumab was given on Day 1 of each 3-week cycle for Cycles 1, 2, 5, and 6. In maintenance period, subjects received bevacizumab 15 mg/kg administered IV on Days 1 and

22 of each 6-week cycle.

Arm type	Experimental
Investigational medicinal product name	Bevacizumab solution for intravenous infusion 400 mg/16 mL vial (Avastin)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Bevacizumab 15 mg/kg IV on Day 1 of each 3-week cycle beginning with Cycle 2 for adjuvant subjects, and for neoadjuvant subjects, bevacizumab was given on Day 1 of each 3-week cycle for Cycles 1, 2, 5, and 6.

Number of subjects in period 1	Chemotherapy +Avelumab -> Avelumab + Talazoparib	Chemotherapy -> Talazoparib	Chemotherapy + Bevacizumab -> Bevacizumab
Started	32	13	34
Completed	19	8	27
Not completed	13	5	7
Consent withdrawn by subject	7	3	1
Adverse event, non-fatal	1	1	-
Study terminated by sponsor	-	-	3
Unspecified	1	-	2
Progressive disease	-	-	1
Physician's decision	4	1	-

## Period 2

Period 2 title	Maintenance Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
Arm title	Chemotherapy +Avelumab -> Avelumab + Talazoparib

Arm description:

In chemotherapy period, subjects received paclitaxel 175 mg/m<sup>2</sup> intravenously(IV) over 3 hours followed by carboplatin area under the concentration (AUC) 5 or 6 IV over 15-60 minutes on Days 1 of each 3 week cycle for 6 cycles along with avelumab 800 mg administered IV on Day 1 of each 3-week cycle for 6 cycles. In maintenance period, subjects received avelumab 800 mg administered IV on Days 1, 15 and 29 of each 6-week cycle in combination with talazoparib 0.75 mg self-administered orally once per day. A cycle was defined as 3 weeks (21 days) in the chemotherapy period and 6 weeks (42 days) in the maintenance period, respectively.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Avelumab (MSB0010718C) Solution for Infusion, 20 mg/mL (10 mL/vial)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Avelumab 800 mg administered intravenously on Days 1, 15 and 29 of each 6-week cycle.

Investigational medicinal product name	Talazoparib 1mg Bottle 30 ct. (MDV 3800 Capsules)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 0.75 mg self-administered orally once per day.

<b>Arm title</b>	Chemotherapy -> Talazoparib
------------------	-----------------------------

Arm description:

In chemotherapy period, subjects received paclitaxel 175 mg/m<sup>2</sup> IV over 3 hours followed by carboplatin AUC 5 or 6 IV over 15-60 minutes on Days 1 of each 3-week cycle for 6 cycles. In maintenance period, subjects received talazoparib 0.75 mg self-administered orally once a day, every day of each 6-week cycle.

Arm type	Experimental
Investigational medicinal product name	Talazoparib 0.25 mg Bottle 30 ct. (MDV3800 Capsules)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received Talazoparib 0.75 mg self-administered orally once a day, every day of each 6-week cycle.

<b>Arm title</b>	Chemotherapy + Bevacizumab -> Bevacizumab
------------------	---

Arm description:

In chemotherapy period, subjects received paclitaxel 175 mg/m<sup>2</sup> IV over 3 hours followed by carboplatin AUC 5 or 6 IV over 15-60 minutes on Day 1 of each 3-week cycle for 6 cycles along with Bevacizumab 15 mg/kg IV on Day 1 of each 3-week cycle beginning with Cycle 2 for adjuvant subjects, and for neoadjuvant subjects, bevacizumab was given on Day 1 of each 3-week cycle for Cycles 1, 2, 5, and 6. Reporting group title	Chemotherapy + Bevacizumab -> Bevacizumab
Reporting group description: In chemotherapy period, subjects received paclitaxel 175 mg/m <sup>2</sup> IV over 3 hours followed by carboplatin AUC 5 or 6 IV over 15-60 minutes on Day 1 of each 3-week cycle for 6 cycles along with Bevacizumab 15 mg/kg IV on Day 1 of each 3-week cycle beginning with Cycle 2 for adjuvant subjects, and for neoadjuvant subjects, bevacizumab was given on Day 1 of each 3-week cycle for Cycles 1, 2, 5, and 6. In maintenance period, subjects received bevacizumab 15 mg/kg administered IV on Days 1 and 22 of each 6-week cycle.	

### Primary: Progression-Free Survival (Subjects with newly diagnosed advanced ovarian cancer with defects in DDR+)

End point title	Progression-Free Survival (Subjects with newly diagnosed advanced ovarian cancer with defects in DDR+ <sup>[1]</sup> )
End point description: PFS was defined as the time from randomization to the date of the first documentation of objective progressive disease (PD) or death due to any cause, whichever occurred first. PD: $\geq 20\%$ increase in	

sum of diameters of target lesions, taking as reference the smallest sum on study. In addition to relative increase of 20%, sum must also demonstrate an absolute increase of at least 5mm, appearance of one or more new lesions was considered PD. The analysis population included all randomized subjects. As of 19 March 2019, the sponsor decided to stop enrollment/randomization in the study. A total of 104 subjects were screened and 79 subjects completed screening and randomized in the study before study discontinuation, and 76 subjects were treated across 3 treatment arms. As only 11% projected enrollment was met when enrollment stopped, the original study endpoints are no longer applicable and/or feasible.

End point type	Primary
----------------	---------

End point timeframe:

At screening, 9 and 18 weeks after date of randomization, then every 12 weeks thereafter until PD by Blinded Independent Central Review (BICR) regardless of initiation of new anti-cancer therapy

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this endpoint

End point values	Chemotherapy +Avelumab -> Avelumab + Talazoparib	Chemotherapy -> Talazoparib	Chemotherapy + Bevacizumab -> Bevacizumab

Notes:

[2] - Data for this endpoint was not reported as no formal efficacy analyses performed.

[3] - Data for this endpoint was not reported as no formal efficacy analyses performed.

[4] - Data for this endpoint was not reported as no formal efficacy analyses performed.

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Subjects with Treatment-Emergent Adverse Events (On-Treatment Period)

End point title	Number of Subjects with Treatment-Emergent Adverse Events (On-Treatment Period)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a study subject administered a product; the event need not necessarily have a causal relationship with the treatment or usage. A serious adverse event was any untoward medical occurrence at any dose that resulted in death, was lifethreatening, required inpatient hospitalization or prolongation of existing hospitalization, resulted in persistent or significant

disability/incapacity, resulted in congenital anomaly/birth defect or considered to be an important medical event. An AE was considered TEAE if the event occurred during the on-treatment period. On-treatment period was defined as the time from the first dose of study treatment through up to 30 days after minimum last dose of study treatment or start day of new anti-cancer drug therapy minus 1 day. The analysis population included all randomized subjects who received at least 1 dose of study drug (avelumab, talazoparib, bevacizumab, carboplatin, paclitaxel).

End point type	Secondary
----------------	-----------

End point timeframe:

From the first dose of study treatment through up to 30 days after minimum last dose of study treatment or start day of new anti-cancer drug therapy minus 1 day (maximum up to 3.5 years approximately)

End point values	Chemotherapy +Avelumab -> Avelumab + Talazoparib	Chemotherapy -> Talazoparib	Chemotherapy + Bevacizumab -> Bevacizumab	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	29	13	34	
Units: Subjects				
Subjects with TEAEs	29	13	34	

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Subjects With ADA Against Avelumab by Never and Ever Positive Status

End point title	Number of Subjects With ADA Against Avelumab by Never and Ever Positive Status <sup>[5]</sup>
-----------------	---

End point description:

Predose Antidrug antibodies (ADA) samples were collected within 2 hours prior to avelumab dosing and drawn from the contralateral arm of the avelumab infusion. The analysis population included subjects in Arm A (Chemotherapy +Avelumab -> Avelumab + Talazoparib) only, who had at least 1 ADA sample collected. Only avelumab containing Arm (Arm A) was included as the analysis was against avelumab.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1 pre-dose of Cycles 1, 2, 3, and 4 in the chemotherapy period and Days 1 and 29 of Cycle 1 and Day 1 of Cycles 2, 4, 6, and 10 in the maintenance period. A sample was also collected at the end of treatment/withdrawal.

Notes:

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is reporting statistics for the arms specified.

End point values	Chemotherapy +Avelumab -> Avelumab + Talazoparib			
Subject group type	Reporting group			
Number of subjects analysed	29			
Units: Subjects				
ADA never-positive	17			
ADA ever-positive	12			

## Statistical analyses

## Secondary: Functional Assessment of Ovarian Symptom Index-18 (FOSI-18) Score

End point title	Functional Assessment of Ovarian Symptom Index-18 (FOSI-
-----------------	--

## End point description:

NFOSI-18 was an ovarian cancer-specific symptom index comprised of symptoms rated as highest priority by both oncology clinical experts and women with advanced ovarian cancer. It was specifically designed to be a stand-alone instrument to measure disease-related symptoms, treatment side effects and function/well-being in subjects with ovarian cancer.

The NFOSI-18 has several subscales: disease-related symptoms physical subscale (9 items), disease-related symptoms emotional subscale (1 item), treatment-related side effect subscale (5 items) and functional well-being (3 items). A score of "0" was a severely symptomatic subject and the highest possible score was an asymptomatic subject.

As of 19 March 2019, the sponsor decided to stop enrollment/randomization in the study. As only 11% projected enrollment was met when enrollment stopped, the original study endpoints are no longer applicable and/or feasible.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the signing of Informed consent (IC) up to 90 calendar days after the last administration of the investigational product (maximum of 3.5 years). AEs were summarized based on the on-treatment period unless otherwise specified.

Adverse event reporting additional description:

Both non serious AEs and SAEs were recorded on the case report form.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 June 2019	<p>The JAVELIN Ovarian 100 study (B9991010) was stopped due to futility of efficacy at a planned interim analysis, and therefore, the Sponsor decided to stop enrollment in the JAVELIN Ovarian PARP 100 study (B9991030). On 19 March 2019, a Dear Investigator Letter was issued to notify the investigational sites that no new subjects could be screened or randomized.</p> <p>Subjects who remain in the study will continue receiving investigational products according to their randomized treatment assignment and will be monitored for appropriate safety assessments until treatment discontinuation.</p> <p>The purpose of protocol amendment 2 was to reduce study-specific procedure assessments (ie, efficacy, physical examination, electrocardiogram, ePROs and tumor assessments, PK and Biomarkers) for the ongoing subjects.</p> <p>The original schedule of activities(SOA) was replaced by a new SOA. The study objectives and endpoints in Section 2 were no longer applicable and/or feasible.</p> <p>The below assessments in section (Section 7) including Pharmacokinetic (Avelumab and Talazoparib); immunogenicity; Biomarker and Pharmacodynamic; Tumor Tissue Sample; Banked Biospecimens; Tumor Response Assessments including scans and Subject Reported Outcomes were no longer collected. A clarification was also included in the Data Analysis/Statistical Methods section(Section 9) to make the analysis fit for purpose.</p>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As only 11% projected enrollment was met prior to the study discontinuation, the original study endpoints are no longer applicable and/or feasible, only the Safety, PK and Immunogenicity Analysis were done and these data are included in this report.

Notes:
