

## Clinical trial results:

**A randomised, double-blind, placebo-controlled trial to evaluate the effect of Epstein-Barr virus suppression in chronic obstructive pulmonary disease (EViSCO trial).**

### Summary

EudraCT number	2017-004686-28
Trial protocol	GB
Global end of trial date	27 May 2020

### Results information

Result version number	v1 (current)
This version publication date	31 May 2021
First version publication date	31 May 2021

### Trial information

#### Trial identification

Sponsor protocol code	14143JK-AS
-----------------------	------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03699904
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 January 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 May 2020
Global end of trial reached?	Yes
Global end of trial date	27 May 2020
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

Aim: To establish if an antiviral therapy (valaciclovir) used to treat other herpes viruses is safe in patients with COPD. To examine whether it is possible to suppress EBV in the airways of patients with COPD and examine important outcome measures including lung function and markers of airway inflammation in the blood and sputum.

Primary Objective: To evaluate the safety of valaciclovir (1 gram three times daily for 8 weeks) for the suppression of Epstein-Barr virus in patients with COPD. To suppress Epstein-Barr virus shedding in COPD.

Protection of trial subjects:

The risks for the patients in the intervention group included the side effects of the study drug (valaciclovir) and included headache, nausea, diarrhoea, vomiting and photosensitivity reaction. Patients with documented history of allergy or intolerance of the study drug were excluded from the trial. Patients unable to produce sputum samples spontaneously were offered the opportunity to undergo sputum induction this can cause bronchospasm. Therefore, subjects requiring sputum induction received prior nebulised bronchodilator and had serial FEV1 monitoring to ensure no deterioration. An independent data monitoring and ethics committee was also convened for the trial.

Background therapy:

Not Applicable

Evidence for comparator:

The comparator was placebo.

Actual start date of recruitment	02 November 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 85
Worldwide total number of subjects	85
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	49
From 65 to 84 years	36
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Recruitment took place between 02/11/2018 and 12/03/2020 from a single site, the Mater Hospital Belfast. 85 patients out of the planned 88 patients were recruited during this period. Recruitment to the trial was terminated early (08/04/2020) due to the risks of ongoing recruitment of patients with COPD given the current Covid 19 pandemic.

### Pre-assignment

Screening details:

Potentially eligible subjects with COPD were identified and screened by members of the direct care team based on the inclusion/exclusion criteria as specified in the study protocol. A total of 171 patients were screened, of which 85 patients were recruited.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

This study was a randomised double blind placebo controlled trial with an allocation ratio of 1 : 1. Randomisation was undertaken by the clinical trials unit using randomised permuted blocks. All researchers were blinded to the treatment allocation.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Intervention

Arm description:

The intervention was valaciclovir 1 gram to be taken 3 times daily for 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Valaciclovir 500mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Valaciclovir 1 gram (2 x 500mg) orally three times daily for 8 weeks.

<b>Arm title</b>	Control
------------------	---------

Arm description:

The comparator was matched placebo to be taken 3 times daily for 8 weeks.

Arm type	Placebo
Investigational medicinal product name	Matched placebo (Avicel®PH)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Matched placebo (Avicel®PH) orally three times daily for 8 weeks.

Number of subjects in period 1 <sup>[1]</sup>	Intervention	Control
Started	43	41
Completed	41	40
Not completed	2	1
Lost to follow-up	2	1

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One patient was randomised to the trial, this patient subsequently withdrew prior to treatment allocation. 85 patients were randomised, 84 recieved an allocation to a treatment arm.

## Baseline characteristics

### Reporting groups

Reporting group title	Intervention

## End points

### End points reporting groups

Reporting group title	Intervention
Reporting group description: The intervention was valaciclovir 1 gram to be taken 3 times daily for 8 weeks.	
Reporting group title	Control
Reporting group description: The comparator was matched placebo to be taken 3 times daily for 8 weeks.	

### Primary: Primary Efficacy Outcome (EBV Suppression)

End point title	Primary Efficacy Outcome (EBV Suppression)
End point description:	
End point type	Primary
End point timeframe: 8 Weeks	

End point values	Intervention	Control		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	41	40		
Units: n(%)				
Yes	36	17		
No	5	23		
Not Recorded	0	0		

### Statistical analyses

Statistical analysis title	Primary Efficacy ITT
Statistical analysis description: The primary efficacy outcome is suppression of Epstein-Barr virus in the sputum of subjects with COPD and was assessed using quantitative PCR at baseline and 8 weeks. EBV suppression is defined as a 90% reduction in the viral load.	
Comparison groups	Intervention v Control
Number of subjects included in analysis	81
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Chi-squared
Parameter estimate	Odds ratio (OR)
Point estimate	9.7

Confidence interval	
level	95 %
sides	2-sided
lower limit	3.2
upper limit	30

### Primary: Primary Safety Outcome (SARs)

End point title	Primary Safety Outcome (SARs) <sup>[1]</sup>
End point description: The primary safety outcome is the incidence of serious adverse reactions (SARs).	
End point type	Primary
End point timeframe: Week 8	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: It was planned that the number of patients experiencing SAR in the two groups would be compared using Fisher's exact test, reporting the relative risk and 95% confidence interval. There were no SARs reported and thus it was not possible to carry out the planned analysis.

End point values	Intervention	Control		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	43	41		
Units: n(%)				
Yes	0	0		
No	43	41		

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

The AE reporting period for this trial begins on enrolment into the trial and ends 28 days following the administration of the study drug.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 September 2019	<p>Substantial Amendment 1 (Amendment 3) was for the amendment of protocol version 2.0 (28/11/2018) to protocol version 3.0 (22/05/2019). The study sponsor requested that EBV quantitative PCR should be listed as a co-primary outcome as the study sample size was calculated based on this parameter. In addition the wording of the primary safety outcome was amended to: "The primary safety outcome is the incidence of serious adverse reactions (SARs)".</p> <p>This amendment was requested by the sponsor prior to recruitment commencing. Recruitment was permitted to commence and subsequently the amendment was submitted and approved by Ethics and MHRA.</p>
18 March 2020	<p>Substantial Amendment 2 (Amendment 7) was for the amendment of protocol version 3.0 (22/05/2019) to protocol version 4.0 (22/04/2020). This amendment was submitted in light of the Covid19 pandemic lockdown and detailed that study visits would be conducted virtually in order to protect study participants. This was actioned with immediate effect on urgent safety grounds.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
08 April 2020	<p>The EVISCO trial was terminated early. A total of 85 patients out of the planned 88 patients were recruited. Recruitment to the trial was terminated early (08/04/2020) due to the risks of ongoing recruitment of patients with COPD during the Covid 19 pandemic.</p>	-

Notes:

### Limitations and caveats

None reported
