

## Clinical trial results: Probiotic Treatment of Ulcerative Colitis with Trichuris suis ova (TSO) Summary

EudraCT number	2017-004772-65
Trial protocol	DK
Global end of trial date	10 January 2022

### Results information

Result version number	v1 (current)
This version publication date	31 December 2022
First version publication date	31 December 2022
Summary attachment (see zip file)	PROCTO study Summary (Summary PROCTO Study.pdf)

### Trial information

#### Trial identification

Sponsor protocol code	PROCTO
-----------------------	--------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03565939
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	ParaTech A/S
Sponsor organisation address	Dr. Neergaards Vej 3, Hoersholm, Denmark, 2970
Public contact	Christian Kapel CEO, Professor, PhD, ParaTech A/S, +45 22966270, chk@para-tech.dk
Scientific contact	Hanne Kapel CMO, MSc Pharm, ParaTech A/S, +45 22172480, hsk@para-tech.dk

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 October 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 January 2022
Global end of trial reached?	Yes
Global end of trial date	10 January 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The objectives of the present "PROCTO" trial is to demonstrate that administration of 7500 TSO every second week over 24 weeks will reduce the intestinal inflammation in moderate Ulcerative Colitis (UC) by achieving clinical remission by full Mayo disease score (primary endpoint).

Protection of trial subjects:

All study participants were required to read a Subject Information Sheet and to read and sign an Informed Consent Form and Power of Attorney.

Background therapy:

No treatment or if treated with 5-Aminosalicyl acid (5-ASA): 5-ASA  $\geq$  8 weeks with a stable dose for at least 4 weeks both oral and rectal use.

Evidence for comparator: -

Actual start date of recruitment	04 May 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 119
Worldwide total number of subjects	119
EEA total number of subjects	119

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	110
From 65 to 84 years	9
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The trial took place from May 4 2018 to January 10 2022 at:

- Hvidovre Hospital, Kettegaard Allé 30, 2650 Hvidovre, Denmark

The inclusion of patients were mainly referred from:

- Hvidovre Hospital, Denmark
- Herlev Hospital, Denmark
- Bispebjerg Hospital, Denmark

### Pre-assignment

Screening details:

Participants (18-75 years) with a diagnosis (diagnosed >3 months prior to inclusion and tapered down from last oral steroid  $\geq 4$  weeks prior to inclusion) of moderately active ulcerative colitis (UC) were enrolled in a 1:1 ratio to receive TSO or placebo.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

The TSO has no taste, smell, appearance, or immediate effect, which is different from that of the placebo product, and the participants drank directly from an opaque brown bottle (under sub-investigator observation) to ensure that it was impossible to differentiate between TSO and placebo. To ensure blinding throughout the trial, the laboratory parameters mentioned below were blinded until the end of the trial:

Trichuris suis specific IgG and IgE  
Eosinophils  
Leucocytes

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	7500 TSO

Arm description:

The patients received the 7500 TSO orally as a single administration every 2 weeks for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	TSO 7500
Investigational medicinal product code	
Other name	TSO
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

One dose consisted of 15 ml sulphuric acid H<sub>2</sub>SO<sub>4</sub> pH1 suspension with 7500 embryonated, viable and active TSO (as active ingredient) neutralised with 4.2 ml neutralization solution (saturated sodiumhydrogen-carbonat (NaHCO<sub>3</sub>)).

TSO was administrated on an "empty stomach" i.e. no meal later than 4 hours before receiving the TSO treatment.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

The patients received placebo orally as a single administration every 2 weeks for 24 weeks

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	Placebo
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

One dose consisted of 15 ml sulphuric acid H<sub>2</sub>SO<sub>4</sub> pH1 suspension neutralised with 4.2 ml neutralization solution (saturated sodiumhydrogen-carbonat (NaHCO<sub>3</sub>)).

The placebo was administered on an "empty stomach" i.e. no meal later than 4 hours before receiving the placebo treatment.

<b>Number of subjects in period 1</b>	7500 TSO	Placebo
Started	60	59
Week 12	55	56
Week 14	54	53
Week 16	49	52
Week 18	44	50
Week 20	43	46
Week 22	42	42
Week 24	42	41
Completed	42	41
Not completed	18	18
UC aggravation	17	18
Suspected pregnancy	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	7500 TSO
Reporting group description: The patients received the 7500 TSO orally as a single administration every 2 weeks for 24 weeks.	
Reporting group title	Placebo
Reporting group description: The patients received placebo orally as a single administration every 2 weeks for 24 weeks	

Reporting group values	7500 TSO	Placebo	Total
Number of subjects	60	59	119
Age categorical Units: Subjects			
Adults (18-75 years)	60	59	119
Gender categorical Units: Subjects			
Female	33	28	61
Male	27	31	58

### Subject analysis sets

Subject analysis set title	ITT
Subject analysis set type	Intention-to-treat
Subject analysis set description: All randomised patients.	
Subject analysis set title	PP
Subject analysis set type	Per protocol
Subject analysis set description: Patients that did not receive steroid at least 12 weeks prior to analysis.	
Subject analysis set title	CSF
Subject analysis set type	Sub-group analysis
Subject analysis set description: Complete steroid free (CSF). Patients that did not receive steroid during the study period.	

Reporting group values	ITT	PP	CSF
Number of subjects	119	83	60
Age categorical Units: Subjects			
Adults (18-75 years)	119	83	60
Gender categorical Units: Subjects			
Female	61	45	35
Male	58	38	25

## End points

### End points reporting groups

Reporting group title	7500 TSO
Reporting group description: The patients received the 7500 TSO orally as a single administration every 2 weeks for 24 weeks.	
Reporting group title	Placebo
Reporting group description: The patients received placebo orally as a single administration every 2 weeks for 24 weeks	
Subject analysis set title	ITT
Subject analysis set type	Intention-to-treat
Subject analysis set description: All randomised patients.	
Subject analysis set title	PP
Subject analysis set type	Per protocol
Subject analysis set description: Patients that did not receive steroid at least 12 weeks prior to analysis.	
Subject analysis set title	CSF
Subject analysis set type	Sub-group analysis
Subject analysis set description: Complete steroid free (CSF). Patients that did not receive steroid during the study period.	

### Primary: No. 1: To achieve clinical remission defined as full Mayo score $\leq 2$ at 24 weeks (long-term efficacy) (ITT)

End point title	No. 1: To achieve clinical remission defined as full Mayo score $\leq 2$ at 24 weeks (long-term efficacy) (ITT)
End point description: Percentage of participants who achieved clinical remission defined as full Mayo score $\leq 2$ at 24 weeks or withdrawal. Clinical remission was defined as a complete Mayo score of $\leq 2$ points. The Mayo score was a standard assessment tool to measure ulcerative colitis disease activity in clinical trials. The index consisted of 4 subscores: rectal bleeding, stool frequency, findings on endoscopy, and physician's global assessment. Each subscore was scored on a scale from 0 to 3 and the complete Mayo score ranges from 0 to 12 (higher scores indicate greater disease activity).	
End point type	Primary
End point timeframe: Week 24 or withdrawal.	

End point values	7500 TSO	Placebo	ITT	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	60	59	119	
Units: Full Mayo score 0-12	18	20	38	

### Statistical analyses

Statistical analysis title	Clinical remission ITT (Chi-squared)
----------------------------	--------------------------------------

Statistical analysis description:

Chi-squared test is used to test the difference between the proportion of patients in the TSO and placebo group, who reached the endpoint.

Comparison groups	7500 TSO v Placebo

### Secondary: No. 9: Difference between placebo and TSO in change in disease severity assessed by pMayo scores over time from week 12 to 24 or withdrawal (CSF) (Chi-Squared)

End point title	No. 9: Difference between placebo and TSO in change in disease severity assessed by pMayo scores over time from week 12 to 24 or withdrawal (CSF) (Chi-Squared)
-----------------	---

End point description:

pMayo score consisted of 3 subscores: rectal bleeding, stool frequency, and physician's global assessment. Each subscore was scored on a scale from 0 to 3 and the complete pMayo score ranges from 0 to 9 (higher scores indicate greater disease activity).

WD visit data is allocated the visit immediately after the last visit before withdrawal. I.e., a pMayo score from a WD visit between week 10 and week 12 is allocated pMayo week 12.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Day 0 to day 210 (+/-7 days).

Adverse event reporting additional description:

At each visit investigator document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by participant or observed by investigator was recorded, irrespective of relation to study treatment.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 October 2018	<p>Previous wording: Exclusion Criteria 11.Treatment with antibiotics (e.g., metronidazole or ciprofloxacin), New wording: Exclusion Criteria 11.Treatment with systemic broad-spectrum antibiotics (e.g., metronidazole or ciprofloxacin),</p> <p>Previous wording: Exclusion Criteria 15. Travelling to countries outside of Europe, USA, Australia or Canada within the last 12 weeks prior to baseline or during trial participation. New wording: Exclusion Criteria 15. Travelling to rural districts in countries outside of Europe, USA, Australia or Canada within the last 12 weeks prior to baseline or during trial participation. If patients travel outside of Europe, USA, Australia or Canada they must be tested negative in the standard stool tests (parasites, bacteria and virus) when they return, as at the screening visit.</p> <p>Previous wording: AE and Frequency New wording: Any patient suffering from an AE at trial end has to be followed up until resolution of the AE or up to a maximum of 4 weeks after the patient's trial termination. After 4 weeks, the investigator should issue a final statement concerning the outcome of the AE.</p> <p>Previous wording: Fischer's exact test will be used to test the hypothesis that there is no difference between the proportions in the TSO and placebo group. New wording: Chi-squared test (if events are more than 5) or Fischer's exact test will be used to test the hypothesis that there is no difference between the proportions in the TSO and placebo group.</p> <p>New wording: Added a complete new Appendix 10 "Power of Attorney" and added a sentence in "Patient Data and Data Protection". The patient signs a Power of Attorney to foreign health authorities to have access to all source data including the patient journal.</p>
21 March 2019	<p>Previous wording: Inclusion criteria 8. 5- Aminosalicyl acid (5-ASA) <math>\geq</math> 8 weeks with a stable dose for at least 4 weeks both oral and rectal use. New wording: Inclusion criteria 8. No treatment or if treated with 5-Aminosalicyl acid (5-ASA): 5-ASA <math>\geq</math> 8 weeks with a stable dose for at least 4 weeks both oral and rectal use.</p> <p>New wording: If the patient's home address is more than 70 km from the site Hvidovre Hospital, the patient can receive transportation compensation. As a general rule, the compensation will cover the cheapest mode of transport. In the patient information folder (Appendix 8) the patient is informed that this compensation should be reported to the tax authority (SKAT). Hvidovre Hospital and the Region Hovedstaden's system "TUR" (Transport, Udlæg og Rejse Administration) will handle the compensation. Hvidovre Hospital, Gastro Unit will be compensated by the sponsor ParaTech A/S.</p>

09 September 2021	<p>On March 20 2020, ParaTech A/S informed the Danish Medicines Agency and IEC (VEK) about the COVID-19 Pandemic extraordinary initiatives in relation to the PROCTO study to reduce physical attendance of the patients at the clinical site, Hvidovre Hospital, and thus to minimize the risk of infection and to ensure continued and timely treatment during the PROCTO trial period. These COVID-19 pandemic extraordinary initiatives were described in the amendment.</p> <p>New wording added in the protocol page 50-52 (in abbreviated version):</p> <ol style="list-style-type: none"> <li>1. Distribution of IMP doses from Hvidovre Hospital to the PROCTO patients (Temporary option to distribute directly to clinical trial subjects from sponsors (temporary exemption from §23 (2), of the GDP executive order because of COVID-19))</li> <li>2. Telephone / video consultations / study "visit". Possibility for visits 4-12 as telephone/video consultation and home pregnancy test before IMP administration.</li> <li>3. Blood samples. Only if exacerbation of UC or if an AE occurs blood sampling should be performed at hospital.</li> <li>4. Final sigmoidoscopy should be carried out at hospital as normal</li> <li>5. Monitoring will continue according the COVID-19 restrictions.</li> <li>6. Risk Assessment Report PROCTO and COVID-19 updated frequently</li> <li>7. Advertisement for subject recruitment updated</li> <li>8. The last 6 ongoing patients continue the extraordinary initiatives</li> </ol>
03 November 2021	<p>Adjustment of endpoints according to EMAs guideline "Guideline on the development of new medicinal products for the treatment of Ulcerative Colitis"</p> <p>New wording: Primary endpoint -To achieve clinical remission defined as full Mayo score <math>\leq 2</math> at 24 weeks (long-term efficacy) (ITT, PP)</p> <p>New wording: Secondary Endpoints  - To achieve reduction of full Mayo score of 4 or more steps at 24 weeks (ITT, PP, complete steroid-free)  - To achieve complete steroid free clinical remission defined as full Mayo score <math>\leq 2</math> at 24 weeks (long-term efficacy) (complete steroid-free)  - To achieve endoscopic remission defined as mucosal appearance Mayo sub-score of 0 or 1 at 24 weeks (long-term efficacy) (ITT, PP, complete steroid-free)  - To achieve symptomatic remission defined as stool frequency Mayo sub-score of 0 or 1 and rectal bleeding Mayo sub-score of 0 at 12 weeks (short-term efficacy) and at 24 weeks (long-term efficacy) (ITT, PP, complete steroid-free)  - To reduce time to achieve remission defined as time to achieve a pMayo score <math>\leq 1</math> and time to achieve symptomatic remission defined as stool frequency Mayo sub-score of 0 or 1 and rectal bleeding Mayo sub-score of 0 (0-24 weeks) (ITT, PP, complete steroid-free)  - To reduce time to achieve response defined as time to achieve reduction in pMayo score of 3 or more steps (0-24 weeks) (ITT, PP, complete steroid-free)  - To decrease disease severity assessed by pMayo scores at visit 7 to 13</p> <p>Explorative</p> <ul style="list-style-type: none"> <li>• Steroid use</li> <li>• Patients withdrawn due to worsening of disease</li> <li>• Mucosal healing</li> <li>• Calprotectin</li> <li>• Blood biomarkers</li> <li>• Immune profiling</li> <li>• Microbiome profiling</li> <li>• Patient-reported outcome</li> </ul>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
