Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 March 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 March 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to evaluate the safety and efficacy of avacincaptad pegol (ACP) intravitreal injection compared to sham in participants with autosomal recessive Stargardt disease 1 (STGD1).

Protection of trial subjects:

This study was conducted in accordance with the protocol and consensus ethical principles derived from international guidelines including the following:

- Declaration of Helsinki and CIOMS International Ethical Guidelines
- Applicable ICH GCP Guidelines
- Applicable laws and regulations

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 January 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 11
Country: Number of subjects enrolled	Hungary: 10
Country: Number of subjects enrolled	Israel: 6
Country: Number of subjects enrolled	Italy: 19
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	United States: 63
Worldwide total number of subjects	121
EEA total number of subjects	51

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	121
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants of either gender, of 18 to 60 years of age (inclusive), with the diagnosis of autosomal recessive STGD1 were enrolled in this study.

Pre-assignment

Screening details:

Participants who met all inclusion criteria and none of the exclusion criteria were enrolled in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Avacincaptad Pegol

Arm description:

The participants received ACP 2 mg/eye on Day 1, Month 1, and Month 2 in the following sequence, 14 days apart in the Induction Phase:

o D0: ACP 2 mg/eye

o D14: ACP 2 mg/eye

And the participants then received ACP 4 mg/eye monthly (Month 3 – Month 17) in the Maintenance Phase.

Arm type	Experimental
Investigational medicinal product name	avacincaptad pegol
Investigational medicinal product code	ARC1905
Other name	Zimura (previous name) Izervay
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Intravitreal Injection

Arm title	Sham
------------------	------

Arm description:

The participants received Sham on Day 1, Month 1, and Month 2 in the following sequence, 14 days apart in the Induction Phase:

o D0: Sham

o D14: Sham

And the participants then received Sham monthly (Month 3 – Month 17) in the Maintenance Phase.

Arm type	Placebo
Investigational medicinal product name	sham
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Intravitreal Injection

Not Hispanic or Latino	49	46	95
Unknown or Not Reported	0	0	0
Area of Ellipsoid Zone Defect			
The area of ellipsoid zone defect was measured by en face spectral domain-optical coherence tomography. ITT included all participants who were randomized. Participants were analyzed according to the treatment to which they were assigned at the time of randomization regardless of the actual study drug the participant may have received during the participation in the study. Only participants with available data at Baseline were included.			
Units: mm ²			
arithmetic mean	4.31	3.94	
standard deviation	± 4.85	± 2.46	-

End points

End points reporting groups

Reporting group title	Avacincaptad Pegol
Reporting group description: The participants received ACP 2 mg/eye on Day 1, Month 1, and Month 2 in the following sequence, 14 days apart in the Induction Phase: o D0: ACP 2 mg/eye o D14: ACP 2 mg/eye And the participants then received ACP 4 mg/eye monthly (Month 3 – Month 17) in the Maintenance Phase.	
Reporting group title	Sham
Reporting group description: The participants received Sham on Day 1, Month 1, and Month 2 in the following sequence, 14 days apart in the Induction Phase: o D0: Sham o D14: Sham And the participants then received Sham monthly (Month 3 – Month 17) in the Maintenance Phase.	

Primary: Mean Rate of Change in the Area of Ellipsoid Zone Defect from Baseline through Month 18

End point title	Mean Rate of Change in the Area of Ellipsoid Zone Defect from Baseline through Month 18
End point description: The area of ellipsoid zone defect was measured by en face spectral domain-optical coherence tomography. Rate of change (slope) in the area of ellipsoid zone defect from Baseline through Month 18 was estimated using mixed model for repeated measures (MMRM). ITT included all participants who were randomized. Participants were analyzed according to the treatment to which they were assigned at the time of randomization regardless of the actual study drug the participant may have received during the participation in the study. Participants with either a non-missing baseline or non-missing post-baseline assessment were included.	
End point type	Primary
End point timeframe: Baseline to Month 18	

End point values	Avacincaptad Pegol	Sham		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	61	58

lower limit	-0.3334
upper limit	0.2813
Variability estimate	Standard error of the mean
Dispersion value	0.1551

Secondary: Change in Best Corrected Visual Acuity (BCVA) Using Early Treatment Diabetic Retinopathy Study (ETDRS) Letters from Baseline at Month 18

End point title	Change in Best Corrected Visual Acuity (BCVA) Using Early Treatment Diabetic Retinopathy Study (ETDRS) Letters from Baseline at Month 18
-----------------	--

End point description:

BCVA in the study eye was assessed using ETDRS visual acuity testing chart. The ETDRS Visual Acuity Score (ETDRS letters) is calculated based on the number of letters read on the ETDRS chart. Minimum and maximum possible scores are 0-100. A higher score represented increased visual functioning. A positive change from Baseline indicates an decrease in symptomology. Change in BCVA from Baseline at Month 18 was estimated using MMRM.

ITT included all participants who were randomized. Participants were analyzed according to the treatment to which they were assigned at the time of randomization regardless of the actual study drug the participant may have received during the participation in the study. Participants with a non-missing baseline and at least one non-missing post-baseline assessment were included.

Secondary: Change in Photopic or Mesopic Macular Sensitivity Measured by Microperimetry from Baseline at Month 18

End point title	Change in Photopic or Mesopic Macular Sensitivity Measured by Microperimetry from Baseline at Month 18
-----------------	--

End point description:

Photopic macular sensitivity or mesopic macular sensitivity were measured by microperimetry. Participants either had a photopic or mesopic measurement taken depending on the resources available at their site. Researchers were provided with one measurement regardless of the type of lighting conditions the assessment was conducted in. A higher score represented an increased retinal sensitivity. A positive change from Baseline indicates an improvement in symptomology. Change in Photopic or Mesopic Macular Sensitivity from Baseline at Month 18 was estimated using MMRM.

ITT included all participants who were randomized. Participants were analyzed according to the treatment to which they were assigned at the time of randomization regardless of the actual study drug the participant may have received during the participation in the study. Participants with a non-missing baseline and at least one non-missing post-baseline assessment were included.

Secondary: Number of Participants with Adverse Events (AEs)

End point title	Number of Participants with Adverse Events (AEs)
End point description:	
<p>An AE is defined as any untoward medical occurrence in a participant including unfavorable and unintended signs, symptoms or disease temporally associated with the use of a medicinal product and which does not necessarily have to have a causal relationship to this treatment.</p> <p>AEs include illnesses with onset during the trial, or exacerbations of pre-existing illnesses. Exacerbation of pre-existing illness is defined as a significant increase in the severity of the illness as compared to the start of the trial and was considered when a participant requires new or additional treatment for that illness. Lack of or insufficient clinical response or efficacy was not recorded as an AE.</p> <p>Safety Analysis Set (SAF) included all participants who received at least one dose of study drug. Participants were analyzed in the ACP group if they ever received ACP at any time during the study. Participants that received Sham and never received ACP were analyzed in the Sham group.</p>
