

Clinical trial results:

Phased Avelumab combined with chemotherapy as first-line treatment for patients with advanced small-cell lung cancer (SCLC).

Summary

EudraCT number	2017-004784-12
Trial protocol	GR
Global end of trial date	12 December 2024

Results information

Result version number	v1 (current)
This version publication date	15 June 2025
First version publication date	15 June 2025

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 December 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and efficacy of phased avelumab administration along with first-line chemotherapy for patients with advanced small-cell lung cancer, primarily by determining whether phased avelumab administration and maintenance treatment could prolong Progression-Free Survival (PFS) and 1-year PFS.

Protection of trial subjects:

The study was conducted in accordance with the ethical principles of the Declaration of Helsinki, Good Clinical Practice (GCP) guidelines and local regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 September 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Greece: 55
Worldwide total number of subjects	55
EEA total number of subjects	55

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	24
From 65 to 84 years	31
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study enrolled participants between 16 September 2018 and 16 September 2020 in seven sites.

Pre-assignment

Screening details:

Patients were screened for eligibility prior to entering the study and written informed consent was obtained before any study-related procedures were performed.

Period 1

Period 1 title	Overall trial (Overall period) (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Avelumab + Standard 1st line Chemotherapy
------------------	---

Arm description:

Eligible patients received Cisplatin 80 mg/m² or Carboplatin AUC 5 on Day 1 every three weeks for 4–6 cycles, in combination with Etoposide 100 mg/m² on Days 1–3 every three weeks for 4–6 cycles. Switching between Cisplatin and Carboplatin was permitted for medical reasons.

Avelumab 10 mg/kg was administered as a 1-hour intravenous infusion diluted in 0.9% saline every two weeks, starting from the third chemotherapy cycle. It continued until the end of chemotherapy and was then given as maintenance treatment every two weeks until disease progression. A \pm 3-day window for Avelumab administration was allowed without being considered a treatment delay or protocol deviation.

Arm type	Experimental
Investigational medicinal product name	Avelumab
Investigational medicinal product code	
Other name	Bavencio
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

10 mg/kg were administered as a 1-hour intravenous infusion every two weeks, starting from the third chemotherapy cycle until the completion of chemotherapy, and subsequently as maintenance treatment every two weeks until disease progression, the occurrence of excessive adverse events, the investigator's decision, the patient's refusal to continue treatment, or death, whichever occurred first.

Number of subjects in period 1	Avelumab + Standard 1st line Chemotherapy
Started	55
Completed	38
Not completed	17
Physician decision	2
Consent withdrawn by subject	2
Adverse event, non-fatal	1
Death	4
Progression Disease	8

Baseline characteristics

Reporting groups

Reporting group title	Overall trial (Overall period)
Reporting group description:	
The study included an initial safety run-in, open-label, single-arm part (Part 1), and the actual phase II study (Part 2). During Part 1, at least 6 eligible patients received standard first-line chemotherapy for ES-SCLC and avelumab. Three patients received cisplatin 80mg/m ² and three carboplatin AUC 5 D1 every three weeks for 4-6 cycles. The dose and schedule were confirmed for use in the phase II study if no dose-limiting toxicities (DLTs) were observed after 3 patients completed at least 4 cycles (2 initial chemotherapy-alone cycles plus 2 more with avelumab).	

Reporting group values	Overall trial (Overall period)	Total

End points

End points reporting groups

Reporting group title	Avelumab + Standard 1st line Chemotherapy
-----------------------	---

Reporting group description:

Eligible patients received Cisplatin 80 mg/m² or Carboplatin AUC 5 on Day 1 every three weeks for 4–6 cycles, in combination with Etoposide 100 mg/m² on Days 1–3 every three weeks for 4–6 cycles. Switching between Cisplatin and Carboplatin was permitted for medical reasons.

Avelumab 10 mg/kg was administered as a 1-hour intravenous infusion diluted in 0.9% saline every two weeks, starting from the third chemotherapy cycle. It continued until the end of chemotherapy and was then given as maintenance treatment every two weeks until disease progression. A ± 3 -day window for Avelumab administration was allowed without being considered a treatment delay or protocol deviation.

Primary: Progression Free Survival (1 - YEAR PFS)

End point title	Progression Free Survival (1 - YEAR PFS) ^[1]
-----------------	---

End point description:

End point type	Primary
----------------	---------

End point timeframe:

Progression-Free Survival (PFS) is defined as the time from the date of study entry to the date of disease progression, death from any cause, or last follow-up.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical comparison was performed as no control arm was included. The 1-year PFS rate is reported descriptively with 95% CI in the accompanying KM Plot.

End point values	Avelumab + Standard 1st line Chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	55			
Units: months				
median (confidence interval 95%)	6.0 (5.0 to 7.0)			

Attachments (see zip file)	Kaplan - Meier for PFS/Kaplan - Meier for PFS.jpg
-----------------------------------	---

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
-----------------	-----------------------

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

The OS is defined as the time from date of study entry to the date of death, regardless of the actual cause of the patients' death or date of last contact.

End point values	Avelumab + Standard 1st line Chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	55			
Units: months				
median (confidence interval 95%)	10.3 (7.53 to 12.0)			

Attachments (see zip file)	Kaplan - Meier for OS/Kaplan - Meier for OS.jpg
-----------------------------------	---

Statistical analyses

No statistical analyses for this end point

Secondary: Objective Response Rate (ORR)

End point title	Objective Response Rate (ORR)
End point description: ORR is defined as the proportion of patients with confirmed Complete Response (CR) or confirmed Partial Response (PR) as best overall response to treatment, based on Response Evaluation Criteria in Solid Tumors (RECIST) v. 1.1 guidelines.	
End point type	Secondary
End point timeframe: Tumor assessments were performed every 6 weeks (± 14 days) up to Week 48, then every 12 weeks until radiologic progression. Patients with brain metastases had surveillance MRI ~every 12 weeks or earlier if clinically indicated.	

End point values	Avelumab + Standard 1st line Chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	55			
Units: Percentage				
number (not applicable)	69.1			

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (DoR)

End point title	Duration of Response (DoR)
-----------------	----------------------------

End point description:

CR: Disappearance of all evidence of target and non-target lesions.

PR: At least 30% reduction from baseline in the sum of the longest diameter (SLD) of all lesions.

SD: Neither sufficient increase to qualify for PD nor sufficient shrinkage to qualify for PR.

PD was defined as at least a 20 percent increase in the SLD, taking as reference the smallest SLD recorded from baseline or the appearance of 1 or more new lesions.

End point type	Secondary
----------------	-----------

End point timeframe:

DOR was defined per RECIST 1.1 as the time from first documented CR or PR to the first occurrence of PD or death from any cause within 12 weeks after the last tumor assessment, whichever came first, in patients with confirmed response.

End point values	Avelumab + Standard 1st line Chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	55			
Units: months				
median (confidence interval 95%)	5.6 (4.0 to 6.6)			

Attachments (see zip file)	Kaplan - Meier for DoR/Kaplan - Meier for DoR.png

Statistical analyses

No statistical analyses for this end point

Secondary: Treatment Emergent Adverse Events (TEAEs)

End point title	Treatment Emergent Adverse Events (TEAEs)
-----------------	---

End point description:

According to the National Cancer Institute Common Terminology Criteria for Adverse Events (NCI CTCAE) Version 4.03.

End point type	Secondary
----------------	-----------

End point timeframe:

TEAEs were defined as adverse events (AEs) that occurred between the first dose of study drug administration and up to 90 days after the last dose, which were either absent prior to treatment or had worsened relative to the pretreatment state.

End point values	Avelumab + Standard 1st line Chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	55			
Units: Subjects (Cases)				
Grade 1 & 2	265			
Grade 3 & 4	57			
Grade 5	4			

Attachments (see zip file)	TEAEs_Table/TEAEs_Table.xlsx
-----------------------------------	------------------------------

Statistical analyses

No statistical analyses for this end point

Secondary: Quality of Life (QoL) questionnaires

End point title	Quality of Life (QoL) questionnaires
-----------------	--------------------------------------

End point description:

EQ-5D-5L: A generic health status questionnaire assessing five dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. Responses generate a health profile converted into a single index score ranging from 0.59 (worst health) to 1.00 (best health). Change from baseline was measured.

EORTC QLQ-C30: A cancer-specific tool with 30 questions covering 15 domains, including global health status (GHS), functional domains (physical, role, cognitive, emotional, social), and symptoms. Scores range from 0 (very poor QoL) to 100 (excellent QoL). Change from baseline in GHS was evaluated.

EORTC QLQ-LC13: A lung cancer-specific module assessing symptoms and treatment-related side effects via 13 items. Scores range from 0 (no symptom burden) to 100 (severe symptom burden). Change from baseline was assessed for symptom impact.

End point type	Secondary
----------------	-----------

End point timeframe:

All QoL tools were completed on Day 1 of each cycle. During the Maintenance phase, they were completed every 2 cycles (approximately once a month). QoL assessments were performed prior to any study procedures and treatment.

End point values	Avelumab + Standard 1st line Chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	55 ^[2]			
Units: Index				
arithmetic mean (confidence interval 95%)	66.67 (65.41 to 67.93)			

Notes:

[2] - The data refer exclusively to the EQ-5D-5L questionnaire.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The AE reporting period for the trial began upon signature of the informed consent form by the study subject and ended 90 days after the last dose of study treatment.

Adverse event reporting additional description:

According to the National Cancer Institute Common Terminology Criteria for Adverse Events (NCI CTCAE) Version 4.03.

Assessment type	Systematic
