Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	04 May 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 June 2019
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the clinical efficacy of 2 doses of GSK2857916 in participants with relapsed/refractory multiple myeloma

Protection of trial subjects:

In order to minimize corneal events associated with GSK2857916 prophylactic preservative-free artificial tears should be administered in each eye at least 4 to 8 times daily beginning on Cycle 1 Day 1 until the end of treatment. In the event of ocular symptoms (e.g., dry eyes), the use of artificial tears may be increased up to every 2 hours as needed.

While not yet clinically demonstrated, it is theoretically possible that the application of a cooling eye mask during GSK2857916 administration, and in the first few hours after infusion may subsequently decrease ocular side effects. On the day of infusion at the discretion of the participant and the investigator, the following may be considered:

- Beginning with the start of each GSK2857916 infusion, participants may apply cooling eye masks to their eyes for approximately 1 hour or as much as tolerated.
- Participants may continue using the cooling eye mask beyond the first hour for up to 4 hours. Further use beyond 4 hours is at the participant's discretion.

Participants should receive full supportive care during the study, including transfusions of blood products, growth factors, and treatment with antibiotics, anti-emetics, antidiarrheal, and analgesics, as appropriate. Concomitant therapy with bisphosphonates is allowed. Participants may receive local irradiation for pain or stability control.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 June 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Scientific research
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 5
Country: Number of subjects enrolled	Canada: 12
Country: Number of subjects enrolled	France: 26
Country: Number of subjects enrolled	Germany: 16
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Spain: 17
Country: Number of subjects enrolled	United Kingdom: 12
Country: Number of subjects enrolled	United States: 126

Worldwide total number of subjects	221
EEA total number of subjects	66

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	91
From 65 to 84 years	127
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

This was an open-label, randomized, multicenter study to evaluate the efficacy and safety of belantamab mafodotin monotherapy at a dose of 2.5 milligram per kilogram (mg/kg) or 3.4 mg/kg, given intravenously (IV) in participants with relapsed/refractory multiple myeloma (RRMM).

Pre-assignment

Screening details:

A total of 221 participants were enrolled. The results presented based on data cut-off date of 04 May 2022. Those participants still benefiting from study drug in opinion of treating physician continued to receive study drug in Post Analysis Continued Treatment phase their data will be reported after they stop receiving treatment per protocol.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	GSK2857916 2.5 mg/kg (Frozen liquid)

Arm description:

Participants were administered frozen liquid (30 mg/vial solution in a single use vial) at a dose of 2.5 mg/kg GSK2857916 as IV solution once every three weeks for a maximum of up to 39 cycles (1 cycle= 21 days). Frozen liquid was diluted with 0.9 percent saline.

Arm type	Experimental
Investigational medicinal product name	GSK2857916
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

GSK2857916 frozen liquid was available as 30 milligrams per vial solution in single-use vial. It was diluted with 0.9 percent saline to the appropriate concentration for the dose (2.5 milligram per kilogram [mg/kg]). Participants were administered GSK2857916 via intravenous route

Arm title	GSK2857916 3.4 mg/kg (Frozen liquid)
------------------	--------------------------------------

Arm description:

Participants were administered frozen liquid (30 mg/vial solution in a single use vial) at a dose of 3.4 mg/kg GSK2857916 as IV solution once every three weeks for a maximum of up to 32 cycles (1 cycle= 21 days). Frozen liquid was diluted with 0.9 percent saline.

Arm type	Experimental
Investigational medicinal product name	GSK2857916
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

GSK2857916 frozen liquid was available as 30 milligrams per vial solution in single-use vial. It was diluted with 0.9 percent saline to the appropriate concentration for the dose (3.4 mg/kg). Participants were administered GSK2857916 via intravenous route.

Arm title	GSK2857916 3.4 mg/kg (Lyophilized)
------------------	------------------------------------

Arm description:

Participants were administered lyophilized powder (100 mg/vial in a single use vial) at a dose of 3.4 mg/kg GSK2857916 given IV for a maximum of up to 35 cycles (1 cycle= 21 days). Lyophilized powder was reconstituted using water for injection.

Arm type	Experimental
Investigational medicinal product name	GSK2857916
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

GSK2857916 lyophilized powder was available as 100 milligrams per vial in single-use vial for reconstitution. It was reconstituted using water for injection and diluted with 0.9 percent saline to the appropriate concentration for the dose (3.4 mg/kg). Participants were administered GSK2857916 via intravenous route.

Number of subjects in period 1	GSK2857916 2.5 mg/kg (Frozen liquid)	GSK2857916 3.4 mg/kg (Frozen liquid)	GSK2857916 3.4 mg/kg (Lyophilized)

Primary: Overall response rate (ORR) by Independent Review Committee (IRC) (Full Analysis Population)

End point title	Overall response rate (ORR) by Independent Review Committee (IRC) (Full Analysis Population) ^[1]
End point description:	ORR was determined according to the 2016 international myeloma working group (IMWG) response criteria by IRC. ORR was calculated as the percentage of participants with a confirmed partial response (PR) or better (that is [i.e.], PR, very good partial response [VGPR], complete response [CR] and stringent complete response [sCR]). Confidence intervals were based on the exact method. Full Analysis Population comprised of all randomized participants (any participant who received a treatment randomization number was considered as randomized) whether or not randomized treatment was administered. This population was based on the treatment the participant was randomized to.
End point type	Primary
End point timeframe:	Up to 48 weeks

Notes:

End point description:

DoR is defined as the time from first documented evidence of PR or better until the earliest date of documented PD per IMWG response criteria; or death due to PD among participants who achieved an overall response, i.e., confirmed PR or better. DOR based on responses assessed by investigator is presented. Median and inter-quartile range (first quartile and third quartile) of DOR are presented. Data is not presented for 'GSK2857916 3.4 mg/kg (Lyophilized)' arm as it is not included in Efficacy Population. Only responders (confirmed PR or better) by investigator assessment were included in this analysis. 88888 indicates <75% of participants experienced the event within the treatment arm. Hence, third-quartile could not be derived

End point type	Secondary
End point timeframe:	
Up to 186 weeks	

Notes:

[33] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There are no statistical data to report.

Secondary: Number of participants with change from Baseline in hematology parameters with respect to the normal range

End point title	Number of participants with change from Baseline in hematology parameters with respect to the normal range
-----------------	--

End point description:

Blood samples were collected for assessment of basophils, eosinophils, hematocrit, mean corpuscular hemoglobin (MCH), MCH concentration (MCHC), MC volume (MCV), monocyte, erythrocytes, reticulocytes. Baseline is latest pre-dose assessment (Day 1) with non-missing value, including unscheduled visits. If values were unchanged (eg. high to high) or whose value became normal, were recorded in change to normal/NC category. Participants were counted twice if participant had both decreased to low/increased to high during post-Baseline (PB). Data for worst case PB is presented. Full Safety Population (FSP) comprised of all participants who received at least 1 dose of study drug (frozen liquid or lyophilized powder). 3 out of 221 participants did not receive any study treatment were excluded from FSP. All participants in study were included in analysis (95, 99 and 24 Participants), but only those participants with data available at the specified data points were analyzed (represented by n=X in the category titles).

Secondary: Number of participants with change from Baseline in pulse rate

End point title	Number of participants with change from Baseline in pulse rate
-----------------	--

End point description:

Baseline was defined as the latest pre-dose assessment (Day 1) with a non-missing value, including unscheduled visits. Number of participants with worst case change from Baseline in pulse rate is presented. Data is categorized as: pulse rate 'decrease to <60 beats per minute [bpm]', 'increase to >100 bpm' and 'change to normal or no change'. If values were unchanged (example: increase to >100 bpm to increase to >100 bpm), or whose value became normal, were recorded in the 'change to normal or no change' category. Participants were counted twice if the participant had both 'decreased to <60 bpm' and 'increased to >100 bpm' during post Baseline. Data for worst-case post Baseline is presented. 3 participants out of 221 participants did not receive any study treatment and thus, were excluded from the Full Safety Population.

Secondary: Titers of anti-drug antibodies against GSK2857916

End point title	Titers of anti-drug antibodies against GSK2857916 ^[168]
-----------------	--

End point description:

Serum samples were collected for the determination of ADA using a validated ECL immunoassay. The assay involved screening, confirmation and titration steps. If serum samples contained ADA, they were further analyzed for the specificity of antibodies by a confirmation assay. Confirmed positive samples were titrated to obtain the titers of antibodies. Titers of anti-drug antibodies against GSK2857916 is presented. No participant was found with positive results for ADA test in arm GSK2857916 3.4 mg/kg (Lyophilized). Hence, titer values was not presented for the arm. 3 participants out of 221 participants did not receive any study treatment and thus, were excluded from the Full Safety Population. Only those participants with data available at the specified data points were analyzed.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 186 weeks

Notes:

[168] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There are no statistical data to report.

Secondary: Number of participants with at least one confirmed positive post-

Baseline anti-drug antibody (ADA) result

End point title	Number of participants with at least one confirmed positive post-Baseline anti-drug antibody (ADA) result
-----------------	---

End point description:

Serum samples were collected for the determination of anti-GSK2857916 antibodies (ADA) using a validated electrochemiluminescent (ECL) immunoassay. The assay involved screening, confirmation and titration steps. If serum samples tested positive in the screening assay, they were considered 'potentially positive' and were further analyzed for the specificity using the confirmation assay. Samples that confirmed positive in the confirmation assay were reported as 'positive'. Confirmed positive ADA samples were further characterized in the titration assay to quasi-quantitate the amount of ADA in the sample. Additionally, confirmed positive ADA samples were also tested in a validated neutralizing antibody assay to determine the potential neutralizing activity of the ADA. 3 participants out of 221 participants did not receive any study treatment and thus, were excluded from the Full Safety Population. Only those participants with data available at the specified data points were analyzed.

Secondary: Number of participants with symptomatic AEs measured by patient-reported outcomes version of the common terminology criteria for adverse events (PRO-CTCAE)

End point title	Number of participants with symptomatic AEs measured by patient-reported outcomes version of the common terminology criteria for adverse events (PRO-CTCAE)
-----------------	---

End point description:

The PRO-CTCAE is a patient-reported outcome measure developed to evaluate symptomatic toxicity in participants on cancer clinical trials. It included symptomatic toxicities drawn from the CTCAE like blurred vision, chills, constipation, decreased appetite, fatigue, general pain, heart palpitations, mouth/throat sores, nausea, nosebleed, shortness of breath, vomiting and watery eyes. Items were scored individually on a 0 to 4 scale for severity, frequency and interference. Number of participants with symptomatic AEs (those who had a maximum post-Baseline rating greater than 0, example; 1, 2, 3, or 4) measured by PRO-CTCAE are presented. Full Safety Population.

Secondary: Worst change from Baseline in National Eye Institute Visual Function Questionnaire-25 (NEI-VFQ-25) overall composite score

End point title	Worst change from Baseline in National Eye Institute Visual Function Questionnaire-25 (NEI-VFQ-25) overall composite score
-----------------	--

End point description:

The NEI-VFQ-25 consisted of a base set of 25 vision-targeted questions representing 11 vision-related constructs, plus an additional single-item general health rating question to assess the impact of ocular toxicity on visual function. Items were coded to a 0 to 100 scale and averaged to calculate domains. Domain scores ranged from 0 to 100; higher scores are better. Therefore, increase in score means improvement. Baseline was defined as latest pre-dose assessment (Day 1) with a non-missing value, including unscheduled visits. Change from Baseline was calculated by subtracting Baseline value from the post-dose visit value. Data for worst-case post Baseline is presented. 3 participants out of 221 participants did not receive any study treatment and thus, were excluded from the Full Safety Population. Only those participants with data available at the specified data points were analyzed.

Secondary: Change from Baseline in EORTC QLQ 20-item multiple myeloma module (MY20) score

End point title	Change from Baseline in EORTC QLQ 20-item multiple myeloma module (MY20) score
-----------------	--

End point description:

The EORTC QLQ-MY20 is supplement to QLQ-C30 instrument used in participants with multiple myeloma. The module comprised :20 questions that addressed four myeloma-specific HRQoL domains: disease symptoms(DS), side effects of treatment(SET), future perspective(FP) & body image(BI). Responses are 1 to 4. Scores were averaged & scales were transformed to 0 to 100 scale. A high score for disease symptoms & side effects of treatment represented high level of symptomatology or problems, whereas high score for future perspective & body image represented better outcomes. Baseline was defined as latest pre-dose assessment (Day 1) with non-missing value, including unscheduled visits. Change from Baseline was calculated by subtracting Baseline value from post-dose visit value. 99999 indicates data is not available. 77777 indicates SD could not be calculated for single participant. Only those participants with data available at specified data points were analyzed (represented by n=X in the category titles).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality, Serious adverse events (SAEs) and ($\geq 5\%$) non-serious AEs (Non SAEs) were collected from the start of study treatment until maximum of 186 weeks

Adverse event reporting additional description:

SAEs & non-SAEs reported for FSP (who received atleast 1 dose of frozen liquid or lyophilized powder). 3 out of 221 participants did not receive drug & SAEs & non-SAEs were not reported. Deaths is reported for FSP(221)[all randomized whether or not randomized treatment was given]. The results presented are based on data cut-off date 04 May 2022

Reporting groups

Reporting group title	GSK2857916 2.5 mg/kg (Frozen liquid)
-----------------------	--------------------------------------

Reporting group description:

Participants were administered frozen liquid (30 mg/vial solution in a single use vial) at a dose of 2.5 mg/kg GSK2857916 as IV solution once every three weeks for a maximum of up to 39 cycles (1 cycle= 21 days). Frozen liquid was diluted with 0.9 percent saline.

Reporting group title	GSK2857916 3.4 mg/kg (Lyophilized)
-----------------------	------------------------------------

Reporting group description:

Participants were administered lyophilized powder (100 mg/vial in a single use vial) at a dose of 3.4 mg/kg GSK2857916 given IV for a maximum of up to 35 cycles (1 cycle= 21 days). Lyophilized powder was reconstituted using water for injection.

Reporting group title	GSK2857916 3.4 mg/kg (Frozen liquid)
-----------------------	--------------------------------------

Reporting group description:

Participants were administered frozen liquid (30 mg/vial solution in a single use vial) at a dose of 3.4 mg/kg GSK2857916 as IV solution once every three weeks for a maximum of up to 32 cycles (1 cycle= 21 days). Frozen liquid was diluted with 0.9 percent saline.

subjects affected / exposed	0 / 95 (0.00%)	0 / 24 (0.00%)	1 / 99 (1.01%)
occurrences causally related to treatment / all	0 / 0	0 / 0	1 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Aspartate aminotransferase increased			
subjects affected / exposed	0 / 95 (0.00%)	0 / 24 (0.00%)	1 / 99 (1.01%)
occurrences causally related to treatment / all	0 / 0	0 / 0	1 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Alanine aminotransferase increased			
subjects affected / exposed	0 / 95 (0.00%)	0 / 24 (0.00%)	1 / 99 (1.01%)
occurrences causally related to treatment / all	0 / 0	0 / 0	1 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Electrocardiogram T wave inversion			
subjects affected / exposed	1 / 95 (1.05%)	0 / 24 (0.00%)	0 / 99 (0.00%)
occurrences causally related to treatment / all	0 / 1	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Injury, poisoning and procedural complications			
Infusion related reaction			
subjects affected / exposed	3 / 95 (3.16%)	0 / 24 (0.00%)	2 / 99 (2.02%)
occurrences causally related to treatment / all	4 / 4	0 / 0	2 / 2
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Spinal compression fracture			
subjects affected / exposed	1 / 95 (1.05%)	0 / 24 (0.00%)	1 / 99 (1.01%)
occurrences causally related to treatment / all	0 / 1	0 / 0	0 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Clavicle fracture			
subjects affected / exposed	0 / 95 (0.00%)	1 / 24 (4.17%)	0 / 99 (0.00%)
occurrences causally related to treatment / all	0 / 0	0 / 1	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Fall			

subjects affected / exposed	1 / 95 (1.05%)	0 / 24 (0.00%)	0 / 99 (0.00%)
occurrences causally related to treatment / all	0 / 1	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Fracture			
subjects affected / exposed	1 / 95 (1.05%)	0 / 24 (0.00%)	0 / 99 (0.00%)
occurrences causally related to treatment / all	0 / 1	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Humerus fracture			
subjects affected / exposed	1 / 95 (1.05%)	0 / 24 (0.00%)	0 / 99 (0.00%)
occurrences causally related to treatment / all	0 / 1	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Upper limb fracture			
subjects affected / exposed	0 / 95 (0.00%)	0 / 24 (0.00%)	1 / 99 (1.01%)
occurrences causally related to treatment / all	0 / 0	0 / 0	0 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Tibia fracture			
subjects affected / exposed	1 / 95 (1.05%)	0 / 24 (0.00%)	0 / 99 (0.00%)
occurrences causally related to treatment / all	0 / 1	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Subdural haematoma			
subjects affected / exposed	0 / 95 (0.00%)	1 / 24 (4.17%)	0 / 99 (0.00%)
occurrences causally related to treatment / all	0 / 0	0 / 1	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Road traffic accident

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 April 2018	Amendment 01: Addressed regulatory agency advice. The original single-arm design with 1 dose level (3.4 milligram per kilogram [mg/kg] GSK2857916 once every 3 weeks [Q3W]) was amended to an open label, randomized, 2-arm study with 2 dose levels by including the 2.5 mg/kg Q3W dose. In addition, a new exploratory cohort of 25 participants, who will receive a lyophilized configuration of GSK2857916, was added to gain clinical experience with the lyophilized configuration. To accommodate these main changes, the overall sample size and related analytical methods were changed.
04 September 2018	Amendment 02: Addressed feedback from regulatory agencies, ethics committee/institutional review board, and investigators. The updates included the addition of Exclusion Criteria defining the use of high dose steroids, clarification of specific timeframe from last treatment required for systemic anti-myeloma therapy, and increase of corrected QT interval Fridericia criteria. Additional pharmacokinetic sampling timepoints were added to capture the maximum observed concentration of the free cytotoxic drug (cysteine-maleimidocaproyl monomethyl auristatin F [cys-mcMMAF]) and to better define the kinetics of cys-mcMMAF and the elimination phase of antibody drug conjugate and cys-mcMMAF. Soluble B-cell maturation antigen (BCMA) collection timepoints were also added to capture the effect of GSK2857916 administration on soluble BCMA concentrations over time as a marker of pharmacodynamic effect. The dose modifications guidelines for GSK2857916 related Corneal Events clarified dose adjustments for GlaxoSmithKline Scale Grade 2 events.
17 December 2018	Amendment 03: Addressed over-enrolment in the frozen liquid solution portion of the study. Due to the over-enrolment, the primary analysis will be based on all randomized participants (anticipated approximately 200) enrolled into the frozen liquid solution arms. In addition, a sensitivity analysis based on the first 130 participants will be performed to account for the original design.
21 October 2019	Amendment 04: Updated schedule of activities to include the footnotes. Updated risk assessment, modified dose justification, modified treatments administered, updated dose reductions for toxicity, modified corneal supportive care guidelines and schedule of activities, updated guidance on prohibited medications, updated requirements for efficacy assessments, modified timeframes for contraception usage in males and females, modified monocular prophylaxis and treatment, updated immunogenicity, updated timeframe of minimal residual disease testing, updated GlaxoSmithKline corneal event severity scale and mitigation strategy for treatment related corneal events.
08 October 2020	Amendment 05: The protocol has been amended to provide updates based on analyses of data from the DREAMM-1, DREAMM-2 and the exposure Corrected QT interval. The updates include the removal of ECG collection, unless clinically indicated, and updated contraception timeframe. The dose modification guidelines for belantamab mafodotin related corneal events was updated to align with the approved label and an appendix on Home Healthcare and Telemedicine Approaches was introduced as a result of the COVID-19 pandemic to ensure sites and participants had alternate approaches to assist participants to continue receiving care while maintaining protocol adherence.
19 November 2021	Amendment 06: The protocol has been amended to provide updates including the addition of the end of study definition and continued access to study intervention after the end of the study section (Post Analysis Continued Treatment [PACT])

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
