Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 January 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 January 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the effect of fasinumab compared to placebo on peripheral nerves in subjects with pain due to Osteoarthritis (OA) of the hip or knee.

The secondary objectives of the study were to:

- Evaluate the efficacy of fasinumab compared to placebo in subjects with pain due to OA of the hip or knee
- Evaluate the safety and tolerability of fasinumab compared to placebo in subjects with pain due to OA of the hip or knee
- Characterize the concentrations of fasinumab in serum in subjects with pain due to OA of the hip or knee
- Evaluate the immunogenicity of fasinumab in subjects with pain due to OA of the hip or knee

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with the International Conference on Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 October 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 63
Country: Number of subjects enrolled	United States: 55
Country: Number of subjects enrolled	Poland: 62
Worldwide total number of subjects	180
EEA total number of subjects	62

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	102
From 65 to 84 years	78
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 1604 subjects were screened, out of which 180 were randomized into the study.

Pre-assignment

Screening details:

Subjects who met the eligibility criteria were randomized in a 1:1 ratio to receive either fasinumab or fasinumab-matching placebo.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Fasinumab-matching Placebo

Arm description:

Subjects received Fasinumab-matching placebo subcutaneously (SC) every 4 weeks (Q4W) from Day 1 through Week 12 of the 16-week treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of Fasinumab-matching placebo in the abdomen, thigh, or upper arm.

Arm title	Fasinumab 1 mg SC Q4W
------------------	-----------------------

Arm description:

Subjects received Fasinumab 1 milligram (mg) SC Q4W from Day 1 through Week 12 of the 16-week treatment period.

Arm type	Experimental
Investigational medicinal product name	Fasinumab
Investigational medicinal product code	REGN475
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of Fasinumab in the abdomen, thigh, or upper arm.

Number of subjects in period 1	Fasinumab-matching Placebo	Fasinumab 1 mg SC Q4W
Started	89	91
Completed	67	75
Not completed	22	16
Physician decision	1	-
Consent withdrawn by subject	11	9
Noncompliance with protocol by subject	1	-
Adverse event, non-fatal	1	-
Lost to follow-up	8	7

Baseline characteristics

Reporting groups

Reporting group title	Fasinumab-matching Placebo
Reporting group description:	
Subjects received Fasinumab-matching placebo subcutaneously (SC) every 4 weeks (Q4W) from Day 1 through Week 12 of the 16-week treatment period.	
Reporting group title	Fasinumab 1 mg SC Q4W
Reporting group description:	
Subjects received Fasinumab 1 milligram (mg) SC Q4W from Day 1 through Week 12 of the 16-week treatment period.	

Reporting group values	Fasinumab-matching Placebo	Fasinumab 1 mg SC Q4W	Total
Number of subjects	89	91	180
Age categorical			
Units: Subjects			

Age continuous			
Units: years			
arithmetic mean	62.4	62.9	
standard deviation	± 7.9	± 9.1	-
Gender categorical			
Units: Subjects			
Female	63	59	122
Male	26	32	58
Peroneal Motor Nerve Conduction Velocity			
Peroneal motor nerve conduction velocity was evaluated by electrical stimulation of the nerve and recorded the compound muscle action potential from surface electrodes overlying a muscle supplied by the nerve. The safety analysis set (SAF) included all randomized subjects who received any study drug and was based on the treatment received (as treated). In the SAF, 'N' = 88 in the placebo group as one subject did not meet eligibility criteria but was randomized. The subject did not receive study drug and was therefore excluded from the placebo group in the SAF.			
Units: Meters per Second (m/s)			
arithmetic mean	46.864	46.803	
standard deviation	± 4.174	± 3.880	-
Peroneal Motor Nerve Action Potential Amplitude - Ankle			
Peroneal motor nerve action potential amplitude was evaluated at ankle by electrical stimulation of the nerve and recorded the compound muscle action potential from surface electrodes overlying a muscle supplied by the nerve. SAF included all randomized subjects who received any study drug and was based on the treatment received (as treated). In the SAF, 'N' = 88 in the placebo group as one subject did not meet eligibility criteria but was randomized. The subject did not receive study drug and was therefore excluded from the placebo group in the SAF.			
Units: Millivolts (mV)			
arithmetic mean	4.75	4.67	
standard deviation	± 2.01	± 1.70	-
Sural Sensory Nerve Conduction Velocity			
Sural sensory nerve conduction velocity was evaluated by electrically stimulating sensory fibers and recorded the nerve action potential at a point further along that nerve. SAF included all randomized subjects who received any study drug and was based on the treatment received (as treated). In the SAF, 'N' = 88 in the placebo group as one subject did not meet eligibility criteria but was randomized. The subject did not receive study drug and was therefore excluded from the placebo group in the SAF.			

Units: Meters per Second (m/s)			
arithmetic mean	52.349	52.488	
standard deviation	± 8.519	± 8.276	-
Sural Sensory Nerve Action Potential Amplitude			
Sural sensory nerve action potential amplitude was evaluated by electrically stimulating sensory fibers and recorded the nerve action potential at a point further along that nerve. SAF included all randomized subjects who received any study drug and was based on the treatment received (as treated). In the SAF, 'N' = 88 in the placebo group as one subject did not meet eligibility criteria but was randomized. The subject did not receive study drug and was therefore excluded from the placebo group in the SAF.			
Units: Microvolts (µV)			
arithmetic mean	9.67	9.95	
standard deviation	± 4.79	± 5.67	-
Ulnar Sensory Nerve Conduction Velocity			
Ulnar sensory nerve conduction velocity was evaluated by electrically stimulating sensory fibers and recorded the nerve action potential at a point further along that nerve. SAF included all randomized subjects who received any study drug and was based on the treatment received (as treated). In the SAF, 'N' = 88 in the placebo group as one subject did not meet eligibility criteria but was randomized. The subject did not receive study drug and was therefore excluded from the placebo group in the SAF.			
Units: Meters per Second (m/s)			
arithmetic mean	56.033	56.238	
standard deviation	± 6.584	± 7.452	-
Ulnar Sensory Nerve Action Potential Amplitude			
Ulnar sensory nerve action potential amplitude was evaluated by electrically stimulating sensory fibers and recorded the nerve action potential at a point further along that nerve. SAF included all randomized subjects who received any study drug and was based on the treatment received (as treated). In the SAF, 'N' = 88 in the placebo group as one subject did not meet eligibility criteria but was randomized. The subject did not receive study drug and was therefore excluded from the placebo group in the SAF.			
Units: Microvolts (µV)			
arithmetic mean	19.18	18.47	
standard deviation	± 9.68	± 10.20	-

End points

End points reporting groups

Reporting group title	Fasinumab-matching Placebo
Reporting group description: Subjects received Fasinumab-matching placebo subcutaneously (SC) every 4 weeks (Q4W) from Day 1 through Week 12 of the 16-week treatment period.	
Reporting group title	Fasinumab 1 mg SC Q4W
Reporting group description: Subjects received Fasinumab 1 milligram (mg) SC Q4W from Day 1 through Week 12 of the 16-week treatment period.	

Primary: Change From Baseline in Peroneal Motor Nerve Conduction Velocity at Week 16

End point title	Change From Baseline in Peroneal Motor Nerve Conduction Velocity at Week 16

Secondary: Change From Baseline in Western Ontario and McMaster Universities Osteoarthritis Index (WOMAC) Pain Subscale Score at Week 16

End point title	Change From Baseline in Western Ontario and McMaster Universities Osteoarthritis Index (WOMAC) Pain Subscale Score at Week 16
-----------------	-------------------------------------------------------------------------------------------------------------------------------

End point description:

WOMAC pain subscale was a 5-item questionnaire used to assess the amount of pain experienced due to osteoarthritis in the index joint (knee or hip) in past 48 hours. It was calculated as the mean of the scores from the 5 individual questions scored on a numerical rating scale (NRS) of 0 (no pain) to 10 (higher pain), where higher scores indicated higher pain. Total score range for WOMAC pain subscale score is 0 to 10, where higher scores indicate higher pain. A negative change from baseline indicated improvement. The FAS included all randomized subjects and was based on the treatment allocated (as randomized). Change from Baseline in WOMAC Pain subscale score at Week 16 was reported.

End point type	Secondary

Method	MMRM
Parameter estimate	LS Mean Difference
Point estimate	-1.33
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.123
upper limit	-0.538

Notes:

[7] - Analyses are based on multiple imputation with MMRM model with terms for baseline WOMAC subscale score, treatment, screening Kellgren-Lawrence score, index joint, visit, and treatment by visit interaction.

Secondary: Change From Baseline in WOMAC Physical Function Subscale Score at Week 16

End point title	Change From Baseline in WOMAC Physical Function Subscale Score at Week 16
-----------------	---------------------------------------------------------------------------

End point description:

Physical function referred to subject's ability to move around and perform usual activities of daily living. The WOMAC physical function subscale was a 17-item questionnaire used to assess the degree of difficulty experienced due to osteoarthritis in index joint (knee or hip) during past 48 hours. It was calculated as mean of the scores from 17 individual questions scored on a NRS of 0 (no difficulty) to 10 (extreme difficulty), where higher scores indicated worse function. Total score range for WOMAC physical function subscale score is 0 (no difficulty) to 10 (extreme difficulty), where higher scores indicate worse function. A negative change from baseline indicated improvement. FAS included all randomized subjects and was based on the treatment allocated (as randomized). Change from Baseline in WOMAC physical function subscale score at Week 16 was reported.

Osteoarthritis subjects affected / exposed occurrences (all)	5 / 91 (5.49%) 6	1 / 88 (1.14%) 1	
Infections and infestations			
Nasopharyngitis subjects affected / exposed occurrences (all)	8 / 91 (8.79%) 10	6 / 88 (6.82%) 8	
Upper respiratory tract infection			

subjects affected / exposed	5 / 91 (5.49%)	5 / 88 (5.68%)	
occurrences (all)	5	6	
Urinary tract infection			
subjects affected / exposed	7 / 91 (7.69%)	4 / 88 (4.55%)	
occurrences (all)	8	5	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 July 2018	The purpose of this amendment was to change the fasinumab 3 mg Q4W dose regimen to a 1 mg Q4W dose regimen because the 3 mg Q4W dose regimen is no longer being evaluated in the osteoarthritis (OA) pain program. The 1 mg Q4W dose regimen is now the highest dose being evaluated in this patient population.
19 February 2019	The purpose of this amendment was to revise the criterion for detecting a change in nerve conduction velocity that would be considered not to be within established parameters, in order to reduce false-positive findings.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
