Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 March 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	06 March 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

- Assess the effect of vaccination with Bris10/2007 M2SR (H3N2) vaccine on influenza viral shedding after intranasal challenge with a drifted H3N2 virus, A/Belgium/4217/2015.
- Assess the safety of the Bris10 M2SR (H3N2) vaccine during the period from study vaccine administration until influenza virus challenge.

Protection of trial subjects:

This study was conducted in compliance with the protocol, the ICH Note for Guidance on Good Clinical Practice (CMPM/ICH/135/95) and with the applicable regulatory requirement(s)

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 May 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 108
Worldwide total number of subjects	108
EEA total number of subjects	108

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	108

From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted in the SGS clinical pharmacology phase 1 unit in Antwerp, Belgium.

### Pre-assignment

Screening details:

Screening for eligible, healthy male and non-pregnant female subjects who were 18 to 55 years old was performed within approximately 7 weeks prior to randomization/vaccine administration. A total of 108 subjects were randomized into the study and were vaccinated (56 placebo, 52 Bris10 M2SR), according to randomization.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

All subjects underwent the same procedures. The unblinded pharmacy staff or delegate prepared doses (active and placebo), filled delivery devices, and applied an opaque label to the device barrel to obscure any coloration of the contents. The unblinded site staff and unblinded monitor agreed in writing to maintain the blind by not providing details of the dose (active or placebo) to any blinded clinic staff including the investigator or any study subjects.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Subjects randomized to and receiving placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Intranasal use

Dosage and administration details:

The reference product (placebo) used in this study was a physiological saline suitable for intranasal delivery. Commercially available supplies of placebo (0.9% NaCl 10 mL) were used and supplied by the site following approval from the Sponsor. The placebo was drawn into a nasal sprayer for intranasal delivery. Doses of placebo were administered according to the same procedures as Bris10 M2SR vaccine.

<b>Arm title</b>	BRIS10 M2SR
------------------	-------------

Arm description:

Subjects randomized to and receiving BRIS10 M2SR

Arm type	Experimental
Investigational medicinal product name	FluGen's H3N2 (A/Brisbane/10/2007) M2SR Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Intranasal use

Dosage and administration details:

The vaccine was provided frozen and in single-use cryovials. An unblinded pharmacist thawed the vial contents to room temperature just prior to dose administration. The contents were diluted to the dosing

concentration with provided diluent for each subject. The final diluted product was drawn into a nasal sprayer for intranasal delivery.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events are monitored continuously from day of IP treatment until the last study-related activity (typically Day 28)

Adverse event reporting additional description:

At regular intervals during the study, subjects will be asked non-leading questions to determine the occurrence of any AEs. All AEs reported spontaneously during the course of the study will be recorded as well. Solicited and unsolicited signs and symptoms will be reported as AEs after review by the Investigator or designee.
