Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 June 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 November 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to establish the effective dose/dose regimen of RP101 in postmenopausal women with moderate to severe dry eye syndrome applying RP101 ophthalmic sterile solution or matching placebo (vehicle) once (q.d.) or twice a day (b.i.d.) for 3 months

Protection of trial subjects:

The indication proposed for RP101 is dry eye syndrome of moderate-to-severe intensity in postmenopausal women. Therefore, the population selected for the present study was composed of postmenopausal women for at least 3 years presenting with symptoms specific for dry eye syndrome of moderate-to-severe intensity. Patients presenting with severe Meibomian gland dysfunction were excluded due to its potential interference, since a Meibomian gland dysfunction of severe intensity would lead to underestimate the RP101 effect.

The participants in the study could receive benefit from the study treatment because they could experience a relief of dry eye symptoms during the study. Also the patients randomly allocated to the control arm, who received the vehicle (RP101 without the active substance), could receive some benefit from IntelliGel (placebo; vehicle) which was expected to have lubricant properties due to its rheological behaviour.

Safety of the subjects was monitored throughout the study.

Background therapy:

All the previous ocular therapies for moderate/severe dry eye symptom up to screening were discontinued. At study start, all patients used the same topical lubricant for 14 consecutive days (run-in period) in order to start at baseline at homogeneous conditions. During the run-in, all the subjects used the same ocular product (Oculotect®) in order to standardise baseline conditions.

After the run-in, the subjects were randomised and started the allocated study treatment.

In case of need during the study treatment, the patients could instil Larmabak®, artificial tears, as rescue medication in addition to the study treatment.

Evidence for comparator:

In the present study, 2 strengths of RP101 were investigated: 0.1% and 0.05%. IntelliGel® (RP101 vehicle) was selected as the placebo (vehicle) in this study because of its unique properties and to mask the study.

Actual start date of recruitment	18 January 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 8
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Hungary: 89

Worldwide total number of subjects	104
EEA total number of subjects	104

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	63
From 65 to 84 years	41
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited from 18JAN2019 to 28JUN2019

Territories were: Vienna, Austria; München, Germany; Greifswald, Germany; Mainz, Germany; Létavértes, Hungary; Budapest, Hungary; Székesfehérvár Berényi, Hungary

Pre-assignment

Screening details:

During screening, inclusion and exclusion criteria were checked and only eligible patients enrolled in the study. At study start, all patients used the same topical lubricant for 14 consecutive days (run-in period) in order to start at baseline at homogeneous conditions. All screened patients are listed on the screen log.

Pre-assignment period milestones

Number of subjects started	104
Number of subjects completed	104

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Clinical staff, CRO, CRAs, Sponsor, patients were blinded. Blinding was open by data managers only after DB lock. Breaking of an individual randomisation code by the investigator during the study was allowed only when knowledge of the code was essential for the subject's health.

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment group 1

Arm description:

Active investigational product (T1) twice a day

Arm type	Experimental
Investigational medicinal product name	RP101 0.05%, 17- β -oestradiol-3-phosphate ophthalmic sterile solution
Investigational medicinal product code	T1
Other name	
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

One drop (28 μ L) according to the treatment group and dose regimen was instilled into each eye twice a day (b.i.d.), approximately every 12 h (08:30 \pm 1.5 h and 20:30 \pm 1.5 h), for 90 \pm 3 consecutive days.

Arm title	Treatment group 2
------------------	-------------------

Arm description:

Active investigational product (T2) and placebo

Arm type	Experimental
----------	--------------

Investigational medicinal product name	RP101 0.1%, 17- β -oestradiol-3-phosphate ophthalmic sterile solution
Investigational medicinal product code	T2
Other name	
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

One drop (28 μ L) of T2 was instilled into each eye once a day at approximately 8:30 \pm 1.5 h for 90 \pm 3 consecutive days.

Investigational medicinal product name	RP101 matching placebo, ophthalmic sterile solution
Investigational medicinal product code	P
Other name	
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

One drop (28 μ L) of P was instilled into each eye once a day at 20:30 \pm 1.5 h for 90 \pm 3 consecutive days.

Arm title	Treatment group 3
------------------	-------------------

Arm description:

Active investigational product twice a day

Arm type	Experimental
Investigational medicinal product name	RP101 0.1%, 17- β -oestradiol-3-phosphate ophthalmic sterile solution
Investigational medicinal product code	T2
Other name	
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

One drop (28 μ L) of T2 was instilled into each eye twice a day (b.i.d.), approximately every 12 h (08:30 \pm 1.5 h and 20:30 \pm 1.5 h), for 90 \pm 3 consecutive days.

Arm title	Treatment group 4
------------------	-------------------

Arm description:

Placebo twice a day

Arm type	Placebo
Investigational medicinal product name	RP101 matching placebo, ophthalmic sterile solution
Investigational medicinal product code	P
Other name	
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

One drop (28 μ L) of P was instilled into each eye twice a day (b.i.d.), approximately every 12 h (08:30 \pm 1.5 h and 20:30 \pm 1.5 h), for 90 \pm 3 consecutive days

Primary: Schirmer's test type II (with anaesthesia) result

End point title	Schirmer's test type II (with anaesthesia) result
End point description:	
Schirmer's test was performed to measure basal aqueous tear secretion following the instillation of a preservative-free anaesthetic eye drop. Both eyes could be tested at the same time. Schirmer's plus® strips were used. This test was conducted in a dimly lit room. While the patient looked upwards, the lower lid was drawn downwards gently and temporally. The rounded bent end of a sterile strip was inserted in the lower conjunctival sac over the temporal one-third of the lower eyelid margin. The test was to be done without touching directly the Schirmer's test strip with the fingers to avoid contamination of skin oils. The patients were instructed to close their eyes gently. After a 5-min elapse, the Schirmer's test strip was removed and the length of the tear absorption on the strip measured (as mm/5 min). The wetting distance at 5 min for each eye was recorded in the CRF.

Secondary: Tear film break up time (TFBUT)

End point title	Tear film break up time (TFBUT)
End point description:	
TFBUT was measured after instillation of sodium fluorescein solution in the inferior conjunctival cul-de-sac of each eye. The patient was instructed to blink several times to thoroughly mix the fluorescein with the tear film. In order to achieve maximum fluorescence, the examiner waited approximately 30 sec after instillation before evaluating TFBUT. With the aid of a slit lamp, the examiner monitored the integrity of the tear film, noting the time to form lacunae (clear spaces in the tear film) from the time that the eye was open after the last blink. The TFBUT was measured twice during the first minute after fluorescein instillation. If the 2 readings differed by more than 2 sec a third reading was to be taken. The TFBUT value was the average of the 2 or 3 measurements

Secondary: Visual acuity

End point title	Visual acuity
-----------------	---------------

End point description:

Visual acuity was measured using retroilluminated light box and ETDRS 4 meter distance acuity charts. If 20 or more letters were read at 4 metres, the visual acuity score was recorded as the number of letters correct at 4 metres plus 30. If no letters were correctly read at either 4 metres or 1 metre, then the visual acuity score was to be recorded as "0".
