Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 October 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 May 2022
Global end of trial reached?	Yes
Global end of trial date	16 November 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Investigate the efficacy of imlifidase compared with plasma exchange (PE) in removal of donor specific antibodies (DSA) in patients who are experiencing an active or chronic active AMR episode after kidney transplantation

Protection of trial subjects:

Details of the goals of the research and the risk and benefits of the protocol were reviewed with each potential study subject.

In the event of adverse events from the study, full resources of the hospital were available to intervene as medically necessary.

Physicians expert in the care of patients with AMR were responsible for the patients' care at each site.

To mitigate the risk of infections all patients received a standard regimen of antibiotics according to local clinical practice, starting before the first treatment and continuing until IgG levels had returned to acceptable values, as judged by the investigator.

All patients in the imlifidase arm received antihistamine before administration of imlifidase and all patients in both treatment arms were treated in accordance with the study protocol with the background therapy described below.

Background therapy:

All patients received pulse methylprednisolone Day 1 to Day 3, followed by a tapering schedule with prednisolone/prednisone.

Patients randomised to imlifidase received their first dose of methylprednisolone before imlifidase was administered. The patients

did also receive high dose intravenous immunoglobulin (IVIg) 3 days after imlifidase treatment or directly after the last PE. In

addition a single dose of rituximab was given 5 days after completed IVIg infusion.

Evidence for comparator: -

Actual start date of recruitment	06 August 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 4
Country: Number of subjects enrolled	France: 13
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	United States: 3
Country: Number of subjects enrolled	Australia: 1

Worldwide total number of subjects	29
EEA total number of subjects	25

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	25
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited between 06-AUG-2019 and 20-MAY-2022.

Pre-assignment

Screening details:

A total of 34 patients were screened, 30 were randomised, and 29 were included in the study.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Blinding was not feasible due to the nature of the standard of care treatment.

Arms

Are arms mutually exclusive?	Yes
Arm title	Imlifidase

Arm description:

Patients treated with imlifidase

Arm type	Experimental
Investigational medicinal product name	Imlifidase
Investigational medicinal product code	
Other name	IdeS, IgG endopeptidase
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Infusion

Dosage and administration details:

One intravenous dose of imlifidase, 0.25 mg/kg, administered over 15 minutes.

Arm title	Plasma exchange (PE)
------------------	----------------------

Arm description:

Patients treated with SOC, i.e. PE

Arm type	Medical procedure-Active comparato
Investigational medicinal product name	Plasma exchange
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Pharmaceutical dose form not applicable
Routes of administration	Route of administration not applicable

Dosage and administration details:

Plasma exchange is a medicinal procedure

Number of subjects in period 1	Imlifidase	Plasma exchange (PE)
Started	19	10
Completed	17	10
Not completed	2	0
Adverse event, serious fatal	1	-
Lost to follow-up	1	-

End points

End points reporting groups

Reporting group title	Imlifidase
Reporting group description:	
Patients treated with imlifidase	
Reporting group title	Plasma exchange (PE)
Reporting group description:	
Patients treated with SOC, i.e. PE	
Subject analysis set title	PK analysis set
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
PK analysis set includes patients receiving any amount of imlifidase.	

Primary: Maximum Reduction in Donor Specific Antibodies (DSA) Level During the 5 Days Following the Start of Treatment

End point title	Maximum Reduction in Donor Specific Antibodies (DSA) Level During the 5 Days Following the Start of Treatment ^[1]
End point description:	
Maximum reduction (%) in the sum of DSA at any time point during the 5 days following the start of treatment.	
Only DSA with ≥ 1000 mean fluorescence intensity (MFI) at pre-treatment were included in the calculations.	
End point type	Primary
End point timeframe:	
Start of treatment until 5 days following start of treatment	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to the exploratory nature of this trial, no formal hypothesis was tested.

End point values	Imlifidase	Plasma exchange (PE)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	18 ^[2]	8 ^[3]		
Units: Maximum reduction (%)				
arithmetic mean (standard deviation)	94 (\pm 4)	36 (\pm 26)		

Notes:

[2] - 1 patient excluded did not have MFIs above 1000

[3] - 2 patients excluded did not have MFI above 1000

Statistical analyses

No statistical analyses for this end point

Secondary: Reduction in DSA Levels After Treatment

End point title	Reduction in DSA Levels After Treatment
End point description:	
DSA levels were assessed at all visits throughout the study. The results are presented as reduction (%) from baseline. A negative value represents an increase from baseline.	
End point type	Secondary
End point timeframe:	
Screening until Day 180	

End point values	Imlifidase	Plasma exchange (PE)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	18	8		
Units: Reduction from baseline (%)

End point title	Pharmacokinetics of Imlifidase
-----------------	--------------------------------

End point description:

C_{max} = Maximum observed plasma concentration of imlifidase following dosing

T_{max} = Time point for maximum observed plasma concentration of imlifidase following dosing

t_{1/2} = Terminal half-life of imlifidase (alpha t_{1/2} corresponds to the initial phase and beta t_{1/2} corresponds to the elimination phase)

AUC = Area under the imlifidase plasma concentration vs time curve

CL = Clearance of imlifidase means the volume of blood cleared of imlifidase per unit of time

V_{ss} = Volume of distribution associated with steady state

V_Z = Volume of distribution associated with the elimination phase

Secondary: Concentration of Anti-drug Antibodies (ADAs)

End point title	Concentration of Anti-drug Antibodies (ADAs)
-----------------	--

End point description:

Samples were collected and analysed for presence of anti-implifidase IgG throughout the study. Implifidase is an IgG-degrading enzyme of Streptococcus pyogenes. Patients who have been exposed to Streptococcus prior to participating in this trial tested positive for ADA also before exposure to implifidase.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs were collected for 6 months (from signed ICF until end of study including the follow-up period).

AEs after start of trial treatment and within the time of residual drug effect i.e. 28 days are classified as treatment emergent AEs (TEAEs).

Adverse event reporting additional description:

AEs were obtained if spontaneously reported, if reported in response to an open question, or if revealed by observation.

The reported non-serious AEs consists of TEAEs irrespective of relationship to treatment.

The reported SAEs covers the whole study. 6 SAEs were treatment related. The SAE with fatal outcome occurred Day 176.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 March 2020	Amendment 1, substantial, introduced changes (Austria, Australia, France, US) <ul style="list-style-type: none">• Allowed for a kidney biopsy performed within standard of care to be used for inclusion.• Clarified inclusion criteria #5 by adding chronic active AMR.• Clarified that the 3 latest creatinine values prior to the current AMR should be collected.• Extension of trial duration by 8 months.• Benefit/risk section was updated with new number for infusion reactions according to the latest version of IB.
06 October 2020	Amendment 2, substantial introduced the following changes (Austria, Australia, France, US): <ul style="list-style-type: none">• Ensured that patients with asymptomatic Covid-19 were not included in the trial• Serum sickness was no longer classified as a risk• Thrombocytopenic purpura (TTP) was defined as a contraindication and exclusion criterion• Extension of trial duration by 9 months

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
07 April 2020	Due to the COVID-19 pandemic the patient recruitment was temporary halted. During the last quarter of 2020 and during 2021 and 2022 (US sites only) onsite monitoring visits were not accepted due to the Covid-19 pandemic. Source data verification was performed to the extent possible and was fully completed when monitors could visit the sites again.	01 December 2020

Notes:

Limitations and caveats
