## General information about the trial

Main objective of the trial:

Primary objective:

a) Phase I (Safety Run-in): to investigate the safety of IO102 in combination with either pembrolizumab (pembro) alone or pembro + chemotherapy (carboplatin and pemetrexed) in patients with metastatic non-small cell lung cancer (NSCLC), that were eligible for pembro treatment as first-line therapy for stage IV disease.

b) Phase II part: to assess the efficacy of IO102 in combination with either pembro alone or pembro + chemotherapy versus either pembro alone or pembro + chemotherapy as measured by objective response rate (ORR) per investigator assessment in patients with metastatic NSCLC, that were eligible for pembro treatment as first-line therapy.

Secondary objective:

To investigate the safety profile and the secondary measures of efficacy including disease control rate (DCR), time to event parameters including duration of response (DOR), progression free survival (PFS), overall survival (OS), and tumor shrinkage.

Protection of trial subjects:

As per attached synopsis

Background therapy:

Pembrolizumab (Keytruda®), with or without chemotherapy doublet (carboplatin + pemetrexed)

Evidence for comparator: -

Actual start date of recruitment	19 September 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

## Subject disposition

### Recruitment

Recruitment details:

First patient on trial: 19 September 2018

Last patient last visit: 12 April 2022

This was a multicentre study that involved 17 participating sites: nine centres in Spain, six centres in Germany, one centre in the United Kingdom, and one centre in The Netherlands.

### Pre-assignment

Screening details:

Male or female, aged  $\geq 18$  years, diagnosis of metastatic NSCLC (Cohort A) or non-squamous NSCLC (Cohort B) with no prior systemic treatment for their metastatic disease, had PD-L1 tumor expression  $\geq 50\%$  (Cohort A) or  $< 50\%$  (Cohort B), measurable disease, adequate organ function, and an ECOG performance status of 0 or 1.

### Period 1

Period 1 title	Phase I and Phase II (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study. No blinding of the patients or investigators was necessary.

N.B.: Phase II patients were randomized to the experimental treatment (A1 and B1) or the control treatment (A2 and B2) on a 2:1 ratio, depending on the level of tumor PD-L1 expression.

End point description:

The primary endpoint of Phase I of the trial included the occurrence of dose limiting toxicities (DLTs) and the incidence and severity of AEs and serious adverse events (SAEs), including events of clinical interest (ECIs), Eastern Cooperative Oncology Group (ECOG) performance status, physical examination, vital signs, electrocardiogram (ECG), and changes in laboratory values (clinical chemistry and hematology). National Cancer Institute (NCI) Common Terminology Criteria for Adverse Events (CTCAE) version 4.03 was used for grading of events.

AEs are further described in the "Adverse events" section.

Justification: The study was not formally statistically powered and no statistical hypotheses were tested. Data were summarised descriptively.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only ORR data for the four Phase II arms are provided under this section.

ORR data for the two Phase I arms are provided separately.

This is so that 95% confidence interval data can be entered when available (i.e., for Phase II arms but not for Phase I arms).

ORR by baseline PD-L1 expression was a secondary endpoint for both phases and the corresponding data are provided for cohorts B and B1 combined in an attached document.

End point type	Primary
----------------	---------

End point timeframe:

Patients had their disease assessed Q9W (or Q12W as part of the COVID-19 USM) for the first 12 months, and Q12W thereafter.

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The study was not formally statistically powered and no statistical hypotheses were tested. Data were summarised descriptively.

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only ORR data for the two Phase I arms are provided under this section.

ORR data for the four Phase II arms are provided separately.

This is so that 95% confidence interval data can be entered when available (i.e., for Phase II arms but not for Phase I arms).

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

AEs were monitored from the time patients provided written informed consent and throughout the trial duration, until 30 days after the last dose of trial treatment.

Adverse event reporting additional description:

AEs were graded and recorded throughout the trial and during the follow-up period according to NCI CTCAE (Version 4.03).

Assessment type	Systematic

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 September 2018	<p>Global amendment 1, Protocol v2.0, dated 17-Sep-2018</p> <p>Changes in the Conduct of the Trial:</p> <ul style="list-style-type: none"><li>- Eligibility criteria updated to clarify:<ul style="list-style-type: none"><li>a) permissible genomic tumor aberrations in line with KEYNOTE-024 and KEYNOTE-189.</li><li>b) the permissible prior anti-cancer therapy and to align with KEYNOTE-042 to ensure the patient population was comparable.</li><li>c) the location and timeframes of prior radiotherapy which would exclude patients from the trial to ensure no added toxicity after curatively intended radiotherapy and to align with KEYNOTE-189 and KEYNOTE-021.</li><li>d) the permissible participation in a trial of an investigational agent or device (and related timeframes) prior to inclusion in the trial.</li></ul></li><li>- Addition of exclusion criterion of prior allogeneic tissue/solid organ transplant in line with standard text from Merck.</li><li>- Secondary endpoints in the Trial Summary section updated for consistency with protocol Section 4.</li><li>- Schedule of assessments updated to clarify the use of archival tissue for screening, the requirements for biopsies, and to introduce a nadir period to ensure all lab values were known prior to biopsy.</li><li>- Trial design updated to clarify:<ul style="list-style-type: none"><li>a) the decision process by the SMC for expansion of the cohort, recruitment into Phase II and Cohort B.</li><li>b) the process for sequential patient enrolment and clarify the trial pause criteria.</li></ul></li><li>- DLT definition updated to clarify the decision process by the SMC.</li><li>- Therapeutic background updated to clarify IO102 mode of action.</li><li>- Trial diagram updated to clarify AE and ECI reporting requirements and End of Trial definition.</li><li>- Trial treatment section updated to clarify IO102 dose and duration of treatments.</li><li>- Contraception guidance updated to include use of highly effective contraception methods and requirements for female contraception.</li><li>- Blood sampling for biomarkers mandated to ensure enough material for the analysis. Clarification re. number of samples.</li><li>- General administrative changes and corrections were also made.</li></ul>
03 April 2020	<p>Global amendment 2, Protocol v3.0, dated 03-Apr-2020</p> <p>Changes in the Conduct of the Trial:</p> <ul style="list-style-type: none"><li>- Urgent Safety Measures were implemented in response to the COVID-19 pandemic to allow Investigators to minimize or eliminate the immediate hazard of COVID-19 by reducing the number of hospital visits associated with this clinical trial. Pembrolizumab and IO102 could be administered on a Q6W basis, rather than Q3W, and radiological tumor assessments for patients in the first 12 months of the trial could be carried out Q12W rather than Q9W to coincide with the new dosing schedule. Investigators could also discontinue pemetrexed maintenance and combination chemotherapy given to Cohort B1 and B2 patients. Furthermore, patients suspected of having COVID-19 could be given a COVID-19 polymerase chain reaction test.</li><li>- IO102 preparation updated per regulatory request regarding the preparation of IO102 in a laminar flow cabinet. Timing of IO102 preparation also updated.</li><li>- General administrative changes and corrections were also made throughout the protocol.</li></ul> <p>Changes in the Planned Analyses:</p> <ul style="list-style-type: none"><li>- Statistical methods section was updated to clarify how the statistical analysis plan was being updated as a result of the COVID-19 pandemic.</li></ul>
