

Clinical trial results:

A phase 2a proof of concept, randomised, double-blind, placebo-controlled study to evaluate the safety/tolerability and efficacy of 4 subcutaneous injections of namilumab (150 mg) given over 10 weeks in subjects with moderate-to-severely active axial spondyloarthritis including those previously exposed to anti-TNF therapy (NAMASTE study)

Summary

EudraCT number	2018-000176-15

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 May 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 February 2020
Global end of trial reached?	Yes
Global end of trial date	04 February 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of namilumab 150 mg subcutaneous (sc), given on weeks 0, 2, 6 and 10 in subjects with axSpA. The study consisted of a maximum four-week Screening period, followed by a 12-week double-blind treatment evaluation period, followed by a 16-week safety follow-up period.

Protection of trial subjects:

Safety was evaluated based on adverse events (AEs), clinical laboratory tests, vital sign measurements, physical examinations, ECGs (screening only), concomitant medication review, injection-site reactions, allergic reactions, infections, and tuberculosis (TB) evaluations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 July 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 42
Worldwide total number of subjects	42
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	41

From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

42 were randomised (36 subjects to treatment and 6 subjects to placebo)

Pre-assignment

Screening details:

42 were randomised (36 subjects to treatment and 6 subjects to placebo)

Period 1

Period 1 title	Randomised (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	namilumab 150 mg
------------------	------------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	namilumab (150 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

4 subcutaneous injections of namilumab (150 mg) given over 10 weeks

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

4 subcutaneous injections given over 10 weeks

Number of subjects in period 1	namilumab 150 mg	Placebo
