

Clinical trial results:

A Phase 3b Open-label Study of the Anti-FGF23 Antibody, Burosumab (KRN23) in Adult Patients with X-linked Hypophosphatemia (XLH)

Summary

EudraCT number	2018-000202-37
Trial protocol	FR GB IT
Global end of trial date	07 April 2022

Results information

Result version number	v1 (current)
This version publication date	06 April 2023
First version publication date	06 April 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 April 2022
Global end of trial reached?	Yes
Global end of trial date	07 April 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To continue to evaluate the long-term efficacy and safety of burosumab as a treatment for adult patients with XLH and to provide continued treatment for subjects previously enrolled in UX023-CL303 and UX023-CL304 clinical trials.

Protection of trial subjects:

This protocol was written in accordance with the principles established by the 18th World Medical Association General Assembly (Helsinki, 1964) and subsequent amendments and clarifications adopted by the General Assemblies. The Sponsor and investigator made every effort to assure the study described in this protocol was conducted in full conformance with those principles, current Food and Drug Administration (FDA) regulations, ICH Good Clinical Practices (GCP) guidelines and local ethical and regulatory requirements. The investigator made sure he or she was thoroughly familiar with the appropriate administration and potential risks of administration of the study drug, as described in the protocol and the IB, prior to the initiation of the study. It was the investigator's responsibility to obtain signed written informed consent from each potential study subject prior to the conduct of any study procedures. This written informed consent was obtained after the methods, objectives, requirements and potential risks of the study had been fully explained to each potential subject. The investigator explained to each subject that the subject was completely free to refuse to enter the study or to withdraw from it at any time.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 July 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	France: 22
Country: Number of subjects enrolled	Ireland: 2
Country: Number of subjects enrolled	Italy: 2
Worldwide total number of subjects	35
EEA total number of subjects	26

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Adult XLH patients (18 to 70 years) from Europe who had participated in either study UX023-CL303 or UX023-CL304. Subjects were moved to this study as soon as possible after completion of UX023-CL303 or UX023 CL304.

Pre-assignment

Screening details:

Screening visits could occur up to 4 weeks before the baseline visit. Informed consent, Inclusion/Exclusion criteria, medical history, demographics and height were collected. Clinical labs were collected as well as a lateral foot x-ray and patient reported outcomes.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Overall trial
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Burosumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Burosumab was supplied as a sterile, clear, colorless and preservative-free solution in single-use 5 mL vials containing 1 mL of burosumab at a concentration of 30 mg/mL.

Burosumab was administered via SC injection, without dilution, to the abdomen, upper arms or thighs, at the same dose as the last administered during UX023-CL303 or UX023-CL304. The dose remained fixed for the duration of the study, provided serum phosphate levels did not exceed the upper limit of normal (ULN), as measured by the central laboratory, and body weight did not change by >20% from the baseline measurement. The dose was to be recalculated to account for the new body weight if it changed by >20%.

The dose was increased stepwise by 0.4 mg/kg up to a maximum dose of 2.0 mg/kg (maximum dose of 90 mg) if the trough serum phosphate concentration remained below the lower limit of normal (LLN).

Number of subjects in period 1	Overall trial
Started	35
Completed	25
Not completed	10
Consent withdrawn by subject	4
Transfer to commercial burosumab	6

Subject analysis sets

Subject analysis set title	Placebo in the Double-blinded Period - UX023-CL303
Subject analysis set type	Full analysis

Subject analysis set description:

Thirty-five subjects who completed study UX023-CL303 or UX023-CL304 were screened for this study (34 subjects from UX023-CL303 and 1 subject from UX023-CL304). All 35 subjects met the eligibility criteria and were enrolled. Of the 35 subjects, 18 subjects had received placebo during the double-blind period of UX023-CL303 (following the double-blind period, they received burosumab in the open-label periods of that study). This is the Placebo in the Double-blinded Period - UX023-CL303 Analysis set

Subject analysis set title	Burosumab in Double-blinded Period - UX023-CL303 and CL304
Subject analysis set type	Full analysis

Primary: Number of Subjects Achieving Mean Trough Serum Phosphate Level Above the LLN as Assessed by Central Laboratories

End point title	Number of Subjects Achieving Mean Trough Serum Phosphate Level Above the LLN as Assessed by Central Laboratories ^[1]
-----------------	---

End point description:

Number of subjects achieving mean trough serum phosphate level above the LLN (as assessed by the central or local laboratory as a result of the COVID-19 pandemic) in adults with X linked Hypophosphatemia (XLH) at EOS/ET.

End point type	Primary
----------------	---------

End point timeframe:

Baseline through to end of study/end of trial.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics only for this study due to number of patients enrolled. Based on central laboratory data, 28 of the 35 subjects (80.0%) achieved mean trough serum phosphate level above the LLN.

End point values	Overall trial	Placebo in the Double-blinded Period - UX023-CL303	Burosumab in Double-blinded Period - UX023-CL303 and CL304	All (Placebo + Burosumab)
Subject group type	Reporting group	Subject analysis set	Subject analysis set	Subject analysis set
Number of subjects analysed	35	18	17	35
Units: Count of participant	28	12	16	28

Statistical analyses

No statistical analyses for this end point

Primary: Proportion of Subjects Achieving Mean Trough Serum Phosphate Level Above the LLN as Assessed by Local Laboratories

End point title	Proportion of Subjects Achieving Mean Trough Serum Phosphate Level Above the LLN as Assessed by Local Laboratories ^[2]
-----------------	---

End point description:

Proportion of subjects achieving mean trough serum phosphate level above the LLN as assessed by local laboratories (due to the COVID-19 pandemic)

End point type	Primary
----------------	---------

End point timeframe:

From Baseline through to end of study/end of treatment

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics only for this study due to number of patients enrolled. Overall, the results from local laboratories were consistent with the central laboratory: 14 of the 17 subjects (82.4%) had mean trough serum phosphate level above the LLN.

Reporting groups

Reporting group title	Placebo in Double blinded Period from UX023-CL303
-----------------------	---

Reporting group description:

18 subjects received placebo during the double-blind period of UX023-CL303.

Reporting group title	Burosumab in Double-blinded Period From UX023-CL303 & CL304
-----------------------	---

Reporting group description:

17 subjects either received burosumab during the double-blind period of UX023 CL303 or were from study UX023-CL304 (a single-arm study on burosumab, 1 subject).

Reporting group title	All (Placebo + Burosumab)
-----------------------	---------------------------

Reporting group description:

All 35 subjects received at least one dose of burosumab and were included in the Full analysis set (FAS).

Serious adverse events	Placebo in Double blinded Period from UX023-CL303	Burosumab in Double-blinded Period From UX023-CL303 & CL304	All (Placebo + Burosumab)
Total subjects affected by serious adverse events			
subjects affected / exposed	3 / 18 (16.67%)	3 / 17 (17.65%)	6 / 35 (17.14%)

subjects affected / exposed	3 / 18 (16.67%)	6 / 17 (35.29%)	9 / 35 (25.71%)
occurrences (all)	3	7	10
Vitamin D deficiency			
subjects affected / exposed	9 / 18 (50.00%)	10 / 17 (58.82%)	19 / 35 (54.29%)
occurrences (all)	14	13	27

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 April 2019	Amendment 2: Duration of treatment was extended. An Inclusion criterion was updated. Collection of patient reported outcome data frequency was increased. An interim analysis was included. Pharmacokinetic samples were added.
24 April 2020	Amendment 3: Additional blood sampling of peak serum phosphate was added. Clarification on central versus local reading of ECHO, ECG and renal ultra sounds was added. Details on data cuts were added. Collection of details of PHEX analysis was removed. The specific serum phosphate lower limit of normal value used by the central laboratory was updated. Data retention timelines were updated.
25 June 2021	Amendment 4: Amendment 4 was to reduce the burden on the patients and hospital staff during the COVID-19 pandemic. The frequency of some assessments was reduced from every 3 months to every 6 months, and the Six Minute Walk Test and Timed Up and Go test were made optional. Investigators following discussion with the Sponsor could transition patients off the study sooner than the study end date of December 2021 or before commercial product was reimbursed. This was only considered if there was a clear mechanism via which the patient could continue, if they wished, to access burosumab until reimbursement was complete in their country.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
