

## Clinical trial results:

### A Randomized Double-Blind Phase 1b/2 Combined Staggered Multiple Dose Escalation Study of BOS161721 in Systemic Lupus Erythematosus (SLE) Patients on a Background of Limited Standard of Care

#### Summary

EudraCT number	2018-000305-23
Trial protocol	BG HU RO
Global end of trial date	26 November 2020

#### Results information

Result version number	v1 (current)
This version publication date	13 December 2021
First version publication date	13 December 2021

#### Trial information

##### Trial identification

Sponsor protocol code	BOS161721-02
-----------------------	--------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03371251
WHO universal trial number (UTN)	-

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 April 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 November 2020
Global end of trial reached?	Yes
Global end of trial date	26 November 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Multiple ascending doses (MAD) Phase 1b primary objective:

To assess safety, tolerability, and immunogenicity of repeat doses of BOS161721 (20, 60, and 120 mg) administered subcutaneously (SC) in adult subjects with moderate to severe systemic lupus erythematosus (SLE) on limited background standard of care treatment, in order to estimate the optimal dose.

Proof of Concept (POC) Phase 2 Primary Objective:

To demonstrate a superior effect of BOS161721 at the chosen dose compared with placebo for response on the SLE Responder Index 4 (SRI-4).

Protection of trial subjects:

Prior to the initiation of the study at each study center, the clinical study protocol, amendments, patient information sheet, Informed Consent Form (ICF), and all other relevant study documentation were submitted to and approved by the responsible Independent Ethics Committee (IEC)/Institutional Review Board (IRB).

The study was conducted in accordance with the principles set forth in the Declaration of Helsinki as amended in 2000, the Guidelines of the International Council for Harmonisation (ICH) on Good Clinical Practice (GCP) (CPMP/ICH/135/95), as well as the requirements of national drug and data protection laws, in particular the Health Insurance Portability and Accountability Act of 1996 (Public Law 104-191, 104th Congress), privacy regulations, and other applicable regulatory requirements.

Prior to undergoing any study specific procedure, each potential study subject provided signed acknowledgement of their freely given informed consent. If the subject was willing to participate in the study, the ICF was signed and personally dated by the subject, the physician taking the consent and, if applicable, the designated person who explained the nature of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 January 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 18
Country: Number of subjects enrolled	Bulgaria: 7
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	United States: 49
Country: Number of subjects enrolled	Georgia: 19
Country: Number of subjects enrolled	Argentina: 9

Country: Number of subjects enrolled	Colombia: 2
Country: Number of subjects enrolled	Mexico: 6
Country: Number of subjects enrolled	Peru: 29
Worldwide total number of subjects	143
EEA total number of subjects	29

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	131
From 65 to 84 years	12
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted in in the United States, Georgia, Bulgaria, Hungary, Poland, Argentina, Columbia, Mexico, Romania, Ukraine, Philippines and Peru. The first subject was screened on 10 January 2018 and last subject last visit occurred on 26, November 2020.

### Pre-assignment

Screening details:

After successfully completing a screening phase, eligible subjects were randomized to a specified dose of BOS161721 or placebo. All assessments are screening phase were done as per the schedule of assessment table.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Phase 1b: Placebo

Arm description:

Subjects were randomized to receive subcutaneous (SC) dose of placebo. Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits at Days 210, 240, and 270.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was supplied for SC administration

<b>Arm title</b>	Phase 1b: Cohort 1: BOS161721 20 mg
------------------	-------------------------------------

Arm description:

Subjects were randomized to receive a 20 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Arm type	Experimental
Investigational medicinal product name	BOS161721
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

BOS161721 was supplied for SC administration

<b>Arm title</b>	Phase 1b: Cohort 2: BOS161721 60 mg
------------------	-------------------------------------

Arm description:

Subjects were randomized to receive a 60 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Arm type	Experimental
Investigational medicinal product name	BOS161721
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

BOS161721 was supplied for SC administration

<b>Arm title</b>	Phase 1b: Cohort 3: BOS161721 120 mg
------------------	--------------------------------------

Arm description:

Subjects were randomized to receive a 120 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Arm type	Experimental
Investigational medicinal product name	BOS161721
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

BOS161721 was supplied for SC administration

<b>Arm title</b>	Phase 2: Placebo
------------------	------------------

Arm description:

Subjects were randomized to receive a SC dose of placebo (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was supplied for SC administration

<b>Arm title</b>	Phase 2: BOS161721 120 mg
------------------	---------------------------

Arm description:

Subjects were randomized to receive a 120 mg SC dose of BOS161721 (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Arm type	Experimental
Investigational medicinal product name	BOS161721
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

BOS161721 was supplied for SC administration

<b>Number of subjects in period 1</b>	Phase 1b: Placebo	Phase 1b: Cohort 1: BOS161721 20 mg	Phase 1b: Cohort 2: BOS161721 60 mg

## Baseline characteristics

### Reporting groups

Reporting group title	Phase 1b: Placebo
Reporting group description: Subjects were randomized to receive subcutaneous (SC) dose of placebo. Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits at Days 210, 240, and 270.	
Reporting group title	Phase 1b: Cohort 1: BOS161721 20 mg
Reporting group description: Subjects were randomized to receive a 20 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 1b: Cohort 2: BOS161721 60 mg
Reporting group description: Subjects were randomized to receive a 60 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 1b: Cohort 3: BOS161721 120 mg
Reporting group description: Subjects were randomized to receive a 120 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 2: Placebo
Reporting group description: Subjects were randomized to receive a SC dose of placebo (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 2: BOS161721 120 mg
Reporting group description: Subjects were randomized to receive a 120 mg SC dose of BOS161721 (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

## End points

### End points reporting groups

Reporting group title	Phase 1b: Placebo
Reporting group description: Subjects were randomized to receive subcutaneous (SC) dose of placebo. Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits at Days 210, 240, and 270.	
Reporting group title	Phase 1b: Cohort 1: BOS161721 20 mg
Reporting group description: Subjects were randomized to receive a 20 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 1b: Cohort 2: BOS161721 60 mg
Reporting group description: Subjects were randomized to receive a 60 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 1b: Cohort 3: BOS161721 120 mg
Reporting group description: Subjects were randomized to receive a 120 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 2: Placebo
Reporting group description: Subjects were randomized to receive a SC dose of placebo (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	
Reporting group title	Phase 2: BOS161721 120 mg
Reporting group description: Subjects were randomized to receive a 120 mg SC dose of BOS161721 (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.	

### Primary: Phase 1b: Number of Subjects With Adverse Events (AEs)

End point title	Phase 1b: Number of Subjects With Adverse Events (AEs) <sup>[1][2]</sup>
End point description: The safety, tolerability, and immunogenicity of repeat doses of BOS161721 (20, 60, and 120 mg) administered SC were assessed in adult subjects with moderate to severe SLE on limited background standard of care treatment, in order to estimate the optimal dose.	
End point type	Primary
End point timeframe: Up to Day 270	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical tests planned due to small sample size per cohort

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is the primary endpoint for phase 1b only

## Statistical analyses

No statistical analyses for this end point

## Primary: Phase 2: Number of Subjects With an SLE Responder Index 4 (SRI-4) Response at Day 210

End point title	Phase 2: Number of Subjects With an SLE Responder Index 4 (SRI-4) Response at Day 210 <sup>[3]</sup>
-----------------	--

End point description:

The SRI-4 is a composite index of SLE disease improvement that consists of scores derived from the SLE Disease Activity Index 2000 (SLEDAI-2K), the British Isles Lupus Assessment Group (BILAG) 2004 Index and the Physician's Global Assessment (PGA). Response based on the SRI-4 is defined by: 1)  $\geq 4$ -point reduction in the SLEDAI-2K total score; 2) no new severe disease activity (BILAG A organ score) or more than 1 new moderate organ score (BILAG B) compared with baseline; and 3) no deterioration from baseline in the PGA by  $\geq 30$  millimeters. The SLEDAI-2K total score falls between 0 and 105, with higher scores representing increased disease activity. The SRI-4 response in subjects with moderate to severe SLE is associated with broad improvements in clinical and subject-reported outcomes.

End point type	Primary
----------------	---------

End point timeframe:

Day 210

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.  
Justification: This endpoint is the primary endpoint for Phase 2 only

## Statistical analyses

**Secondary: Phase 2: Number of Subjects With an SRI-4, SRI-5, and SRI-6 Response at Each Visit**

End point title	Phase 2: Number of Subjects With an SRI-4, SRI-5, and SRI-6 Response at Each Visit <sup>[18]</sup>
-----------------	--

## End point description:

The SRI-4 is a composite index of SLE disease improvement that consists of scores derived from the SLE Disease Activity Index 2000 (SLEDAI-2K) and the British Isles Lupus Assessment Group (BILAG) 2004 Index. Response based on the SRI-4 is defined by: 1)  $\geq 4$ -point reduction in the SLEDAI-2K global score; 2) no new severe disease activity (BILAG A organ score) or more than 1 new moderate organ score (BILAG B); and 3) no deterioration from baseline in the Physician's Global Assessment (PGA) by  $\geq 30$  millimeters. The SRI-4 response in subjects with moderate to severe SLE is associated with broad improvements in clinical and subject-reported outcomes. SRI-5 and SRI-6 are composite indices of SLE disease improvement that consist of scores derived from the SLEDAI-2K and the BILAG 2004 Index. The SRI-5 and SRI-6 are computed with a minimal five-point or six-point improvement in SLEDAI-2K being required, respectively.

n signifies only the subjects with available data for each time point.

End point type	Secondary

End point title	Phase 2: Number of Subjects With New or Recurrent BILAG Flares ( $\geq 1$ Qualifying BILAG A or $> 1$ Qualifying BILAG B) Through Day 210 <sup>[20]</sup>
-----------------	---

### End point description:

The BILAG-2004 index is an organ-specific 97-question assessment based on the principle of the doctor's intent to treat. Only clinical features attributable to SLE disease activity were recorded and based on the subject's condition in the last 4 weeks compared with the previous 4 weeks. It was scored as not present (0), improved (1), the same (2), worse (3), or new (4). Disease activity was graded separately for 9 body systems to 5 different grades (A to E) as follows: A is very active disease, B is moderate activity, C is mild stable disease, D is inactive now but previously active, and E indicates the organ was never involved. A shift from BILAG-2004 Grade A or B to a lower grade indicates a clinically relevant change in disease activity as the BILAG-2004 grades mirror the decision points for treatment interventions. n signifies only the subjects with available data for each time point.

End point type	Secondary

## Secondary: Phase 2: Mean Change From Baseline in Systemic Lupus International Collaborating Clinics/American College of Rheumatology (SLICC/ACR) Damage Index

End point title	Phase 2: Mean Change From Baseline in Systemic Lupus International Collaborating Clinics/American College of Rheumatology (SLICC/ACR) Damage Index <sup>[36]</sup>
-----------------	--

End point description:

The SLICC/ACR damage index is a validated instrument to assess damage, defined as irreversible impairment, continuously persistent for 6 months (ascertained by clinical assessment), occurring since the onset of lupus, and it is based on a weighted scoring system. This index records damage occurring in subjects with SLE regardless of cause, with demonstrated content, face, criterion, and discriminant validity. A score of 0=no damage. Total maximum score is 47 and increasing score indicates increasing disease severity.

Here, subjects analysed signifies only the subjects with available data for the end point.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline; Day 180

Notes:

[36] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is the secondary endpoint for Phase 2 only

End point values	Phase 2: Placebo	Phase 2: BOS161721 120 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	30	67		
Units: Score on a scale				
arithmetic mean (standard deviation)	0 (± 0)	0.1 (± 0.24)

### Statistical analyses

No statistical analyses for this end point

### Secondary: Phase 2: Duration of Longest SRI-4 Response

End point title	Phase 2: Duration of Longest SRI-4 Response <sup>[41]</sup>
-----------------	---

End point description:

The SRI-4 is a composite index of SLE disease improvement that consists of scores derived from

SLEDAI-2K, BILAG 2004 Index and PGA. Response based on the SRI-4 is defined by: 1)  $\geq 4$ -point reduction in the SLEDAI-2K total score; 2) no new severe disease activity (BILAG A organ score) or more than 1 new moderate organ score (BILAG B) compare with baseline; and 3) no deterioration from baseline in the PGA by  $\geq 30$  millimeters. The total SLEDAI-2K score falls between 0 and 105, with higher scores representing increased disease activity. The PGA is used to assess Investigator's general impression on the patient's overall status of SLE disease activity via visual analogue scale (100 mm) with 0 being "very good, asymptomatic and no limitation of normal activities" with 100 mm being "most severe possible disease ever seen in all SLE patients". The SRI-4 response in subjects with moderate to severe SLE is associated with broad improvements in clinical and subject-reported outcomes.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Day 270

Notes:

[41] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

## Secondary: Phase 2: Time to First BILAG Flare ( $\geq 1$ New or Recurrent BILAG A or $> 1$ New or Recurrent BILAG B) Relative to Baseline Through Day 210

End point title	Phase 2: Time to First BILAG Flare ( $\geq 1$ New or Recurrent BILAG A or $> 1$ New or Recurrent BILAG B) Relative to Baseline Through Day 210 <sup>[43]</sup>
-----------------	--

**End point description:**

The BILAG-2004 index is an organ-specific 97-question assessment based on the principle of the doctor's intent to treat. Only clinical features attributable to SLE disease activity were recorded and based on the subject's condition in the last 4 weeks compared with the previous 4 weeks. It was scored as not present (0), improved (1), the same (2), worse (3), or new (4). Disease activity was graded separately for 9 body systems to 5 different grades (A to E) as follows: A is very active disease, B is moderate activity, C is mild stable disease, D is inactive now but previously active, and E indicates the organ was never involved. A shift from BILAG-2004 Grade A or B to a lower grade indicates a clinically relevant change in disease activity as the BILAG-2004 grades mirror the decision points for treatment interventions.

999.999 = Median was not established based on the number of BILAG flares observed.

End point type	Secondary
----------------	-----------

Dictionary version	23.1
--------------------	------

### Reporting groups

Reporting group title	Phase 1b: Placebo
-----------------------	-------------------

Reporting group description:

Subjects were randomized to receive subcutaneous (SC) dose of placebo. Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits at Days 210, 240, and 270.

Reporting group title	Phase 1b: Cohort 1: BOS161721 20 mg
-----------------------	-------------------------------------

Reporting group description:

Subjects were randomized to receive a 20 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Reporting group title	Phase 1b: Cohort 2: BOS161721 60 mg
-----------------------	-------------------------------------

Reporting group description:

subjects were randomized to receive a 60 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270

Reporting group title	Phase 1b: Cohort 3: BOS161721 120 mg
-----------------------	--------------------------------------

Reporting group description:

Subjects were randomized to receive a 120 mg SC dose of BOS161721. Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Reporting group title	Phase 2: Placebo
-----------------------	------------------

Reporting group description:

Subjects were randomized to receive a SC dose of placebo (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of placebo on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

Reporting group title	Phase 2: BOS161721 120 mg
-----------------------	---------------------------

Reporting group description:

Subjects were randomized to receive a 120 mg SC dose of BOS161721 (as determined from Phase 1b of the study). Subjects received a total of 7 SC monthly doses of BOS161721 on Days 0, 30, 60, 90, 120, 150, and 180, followed by safety follow-up visits on at Days 210, 240, and 270.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 November 2017	Protocol Amendment 1: For clarity, site visits are based on study day number only; Clarification and updated with new safety data; Clarification to correct level of exposure; Removed erroneous text and added clarity that Boston Pharmaceuticals will review data along with DMC for POC Dose selection; Clarification to allow flexibility in exact number enrolled; Dose modifications/ adjustments are not allowed in this study; Screening for POC study can begin while dose decision is being made; Text removed as Boston Pharmaceuticals will be reviewing biomarker data for POC dose selection; Clarification (genotype needed to establish gene signature); text added to clarify how the subject should complete the study; text removed as efficacy data were to be reviewed by Boston Pharmaceuticals in order to make informed dose selection decision.
21 March 2018	Protocol Amendment 2: Replaced 'subjects' to 'patients' since the enrolled participants are with SLE condition; Clarification that POC dose selection will be based on DMC and sponsor assessment; Updated for clarity and to provide a comprehensive list of endpoints identified in the protocol; Clarification on POC sample size; Text updated to clarify that a minimum BILAG 1 'A' or 2 'B' scores is required for screening; Text was added to clarify randomization and blinding process; Clarified that no need for predose injection site reaction assessment at baseline; Text updated to clarify new number of dropouts assumed for the study; Clarify that Grades 2 to 5 injection site reactions are AEs of special interest; Updated to clarify the planned PD assessments; updates done to statistical sections.
27 July 2018	Protocol Amendment 3: Text added to clarify that MAD and POC are 2 portions of this 1 study and not 2 separate studies; updates done for Protocol clarification; updates done for statistical clarification; updates done to include more data from the 120 mg cohort in data review to determine POC dose; updates done to inclusion/exclusion criteria; Urine pregnancy test added at day 270 to ensure patient is not pregnant at end of 90 day follow-up due to 41 day half-life of study drug; Added end of study definitions; Added text to ensure eligibility prior to randomization; Added definition of worsening PGA.
23 January 2019	Protocol Amendment 4: Changes done to correct the error in the previous version; updates done for protocol clarification; Added text for POC dose and justification; Text added 1) to clarify that basal cell carcinoma is not a neoplasia associated with immune suppression, but rather secondary to sun exposure and 2) to clarify specific opportunistic infections of special interest in this study.
23 July 2019	Protocol Amendment 5: Updates done for protocol clarification, Changes done to Objectives and Endpoints; Changes done to Criteria for Inclusion and Exclusion to ensure subjects with moderate to severe active disease are enrolled; provided further clarification that the central eligibility review team can deem a subject ineligible for randomization even if all entrance criteria are met; Added for opioid dosing in SLE subjects.
30 April 2020	Protocol Amendment 6: This amendment summarizes the measures implemented during the COVID-19 pandemic to protect patient safety and data integrity: Safety oversight: In case a subject cannot return to the study site for the scheduled visit, the site staff will contact the subject remotely for safety follow-up; Central Laboratory: In the case that there are courier issues that will prevent the protocol-required laboratory specimens to be sent to the study core laboratory, the site should have the safety laboratory specimens; Investigational Product Dosing: In cases when dosing cannot be performed during the protocol-designated windows, the Investigator should discuss each case with the Sponsor to determine whether it is a missed visit or whether the dosing can be performed outside protocol windows.

### **Interruptions (globally)**

Were there any global interruptions to the trial? No

### **Limitations and caveats**

None reported
