Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 February 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 January 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the RAPID study is to determine whether Etripamil nasal spray (NS) self-administered by patients is superior to placebo at terminating episodes of paroxysmal ventricular tachycardia (PSVT) in an at-home setting.

Protection of trial subjects:

The study protocol, all study protocol amendments, written study participant information, informed consent form (ICF), Investigator's Brochure (IB) and any other relevant documents were reviewed and approved by an independent ethics committee (IEC) or institutional review board (IRB) at each study center.

The study was conducted in accordance with the protocol, the ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines, applicable International Council for Harmonisation (ICH)/Good Clinical Practice (GCP) and other Guidelines, and applicable laws and regulations.

An ICF approved by each study center's IEC/IRB was signed by the participant or their legally authorized representative and the authorized person obtaining the ICF before the participant was entered in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 June 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 178
Country: Number of subjects enrolled	United States: 192
Country: Number of subjects enrolled	Spain: 114
Country: Number of subjects enrolled	Netherlands: 110
Country: Number of subjects enrolled	Poland: 112
Country: Number of subjects enrolled	Belgium: 22
Country: Number of subjects enrolled	France: 8

Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Hungary: 5
Worldwide total number of subjects	748
EEA total number of subjects	378

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	575
From 65 to 84 years	173
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were screened & recruited at sites in France, Spain, the Netherlands, Belgium, Poland, Germany, Hungary. The Efficacy Population included all modified Intent to Treat-mITT patients who took study drug to treat an episode of PSVT confirmed by the Adjudication Committee. The disposition described here is for the Efficacy Population.

Pre-assignment

Screening details:

At the end of the RAPID extension study, the disposition was:

Patients screened = 877;

Patients with screen failure = 130;

Patients who had a test dose = 748;

Patients randomized = 735.

Patients in Test Dose (TD) only population = 445

Patients in the mITT and Safety population = 303

Patients in the Efficacy population = 214

Period 1

Period 1 title	RAPID (Part 2) plus RAPID Ext (Part 3) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Randomization and double-blinding were used to minimize bias arising from the assignment of participants to treatment groups and the expectations of participants, investigators and individuals collecting data.

Arms

Are arms mutually exclusive?	Yes
Arm title	Etripamil

Arm description:

Self-administration of etripamil for a perceived episode of PSVT during the randomized treatment period.

Arm type	Experimental
Investigational medicinal product name	Etripamil
Investigational medicinal product code	MSP-2017
Other name	
Pharmaceutical forms	Nasal/oromucosal spray, solution
Routes of administration	Intranasal use

Dosage and administration details:

The dose of etripamil to be evaluated in the RAPID study is 70 mg per nasal spray device. Each nasal spray device delivers a total of 200µL of etripamil.

Arm title	Placebo
------------------	---------

Arm description:

Self-administration of placebo for a perceived episode of PSVT during the randomized treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal/oromucosal spray, solution
Routes of administration	Intranasal use

Dosage and administration details:

Each nasal spray device delivers a total of 200 µL of placebo

Arm title	Test Dose Only
Arm description:	
Single Test Dose of Etripamil in sinus rhythm before randomization	
Arm type	Pre-Randomization
Investigational medicinal product name	Etripamil
Investigational medicinal product code	MSP-2017
Other name	
Pharmaceutical forms	Nasal/oromucosal spray, solution
Routes of administration	Intranasal use

Dosage and administration details:

The dose of etripamil to be evaluated in the RAPID study is 70 mg per nasal spray device. Each nasal spray device delivers a total of 200µL of etripamil.

Number of subjects in period 1	Etripamil	Placebo	Test Dose Only
Started	160	143	445
Participants randomized	160	143	0

number (not applicable)	81.4	70.0		

Statistical analyses

Statistical analysis title	Kaplan-Meier Analyses - 180 minutes
Comparison groups	Etripamil v Placebo
Number of subjects included in analysis	214
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Wilcoxon (Mann-Whitney)

Secondary: Time to conversion of PSVT at 240 minutes

End point title	Time to conversion of PSVT at 240 minutes ^[18]
-----------------	---

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

At 240 minutes

Notes:

[18] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The relevant statistics for comparing Etripamil vs Placebo is presented here.

End point values	Etripamil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	100		
Units: Kaplan-Meier Estimate (%)				
number (not applicable)	82.3	70.0		

Statistical analyses

Statistical analysis title	Kaplan-Meier Analyses - 240 minutes
Comparison groups	Etripamil v Placebo
Number of subjects included in analysis	214
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Wilcoxon (Mann-Whitney)

Secondary: Time to conversion of PSVT at 300 minutes

End point title	Time to conversion of PSVT at 300 minutes ^[19]
-----------------	---

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

At 300 minutes

Notes:

[19] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The relevant statistics for comparing Etripamil vs Placebo is presented here.

End point values	Etripamil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	100		
Units: Kaplan-Meier Estimate (%)				
number (not applicable)	83.2	72.3		

Statistical analyses

Statistical analysis title	Kaplan-Meier Analyses - 300 minutes
Comparison groups	Etripamil v Placebo

Number of subjects included in analysis	214
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Wilcoxon (Mann-Whitney)

Secondary: Rating of Treatment Satisfaction Questionnaire for Medication®-9 (TSQM-9): Effectiveness

End point title	Rating of Treatment Satisfaction Questionnaire for Medication®-9 (TSQM-9): Effectiveness ^[20]
-----------------	--

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

Completed as soon as possible after termination of the treated PSVT episode

Notes:

[20] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The relevant statistics for comparing Etripamil vs Placebo is presented here.

End point values	Etripamil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	100		
Units: point				
arithmetic mean (standard deviation)	62.3 (± 29.9)	44.9 (± 33.6)		

Statistical analyses

Statistical analysis title	Analysis of Treatment Satisfaction Questionnaire
Comparison groups	Etripamil v Placebo
Number of subjects included in analysis	214
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	ANOVA

Secondary: Rating of Treatment Satisfaction Questionnaire for Medication®-9 (TSQM-9): Convenience

End point title	Rating of Treatment Satisfaction Questionnaire for Medication®-9 (TSQM-9): Convenience ^[21]
-----------------	--

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

Completed as soon as possible after termination of the treated PSVT episode

Notes:

[21] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The relevant statistics for comparing Etripamil vs Placebo is presented here.

End point values	Etripamil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	100		
Units: point				
arithmetic mean (standard deviation)	72.6 (± 17.6)	70.6 (± 17.7)		

Statistical analyses

Statistical analysis title	Analysis of Treatment Satisfaction Questionnaire
Comparison groups	Etripamil v Placebo
Number of subjects included in analysis	214
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.414
Method	ANOVA

Secondary: Durability of Conversion/Reoccurrence of PSVT

End point title	Durability of Conversion/Reoccurrence of PSVT ^[22]
-----------------	---

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

within the 5-hour observation window after conversion to SR for more than 30 seconds

Notes:

[22] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The relevant statistics for comparing Etripamil vs Placebo is presented here.

End point values	Etripamil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	100		
Units: patient				
number (not applicable)	5	5		

Statistical analyses

Statistical analysis title	Durability of Conversion of Adjudicated PSVT to SR
Comparison groups	Etripamil v Placebo
Number of subjects included in analysis	214
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.832
Method	Chi-squared

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Randomized Treatment Emergent Adverse Events (RTEAEs) were defined as treatment-emergent adverse events that occurred within 24 hours after, or 12 hours prior to, or 25 hours prior to and were drug-related to, taking randomized study drug.

Adverse event reporting additional description:

The data presented here are the treatment-emergent adverse events (RTEAEs) for the Safety Population (N=303). 143 were randomized to Placebo vs 160 randomized to Etripamil.

Assessment type	Systematic

Reporting groups

Reporting group title	Etripamil
-----------------------	-----------

Reporting group description:

Self Administration of Etripamil following an episode of PSVT.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Self Administration of Placebo following an episode of PSVT.

Serious adverse events	Etripamil	Placebo	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 160 (0.00%)	1 / 143 (0.70%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Renal and urinary disorders			
Acute kidney injury			
subjects affected / exposed	0 / 160 (0.00%)	1 / 143 (0.70%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 1 %

Non-serious adverse events	Etripamil	Placebo	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	83 / 160 (51.88%)	27 / 143 (18.88%)	
Cardiac disorders			
Ventricular tachycardia			

subjects affected / exposed occurrences (all)	4 / 160 (2.50%) 4	2 / 143 (1.40%) 2	
Nervous system disorders			
Headache			
subjects affected / exposed	4 / 160 (2.50%)	2 / 143 (1.40%)	
occurrences (all)	4	2	
Dysgeusia			
subjects affected / exposed	2 / 160 (1.25%)	1 / 143 (0.70%)	
occurrences (all)	2	1	
Eye disorders			
Lacrimation increased			
subjects affected / exposed	6 / 160 (3.75%)	2 / 143 (1.40%)	
occurrences (all)	6	2	
Respiratory, thoracic and mediastinal disorders			
Nasal discomfort			
subjects affected / exposed	39 / 160 (24.38%)	10 / 143 (6.99%)	
occurrences (all)	39	10	
Nasal congestion			
subjects affected / exposed	23 / 160 (14.38%)	1 / 143 (0.70%)	
occurrences (all)	23	1	
Rhinorrhoea			
subjects affected / exposed	17 / 160 (10.63%)	4 / 143 (2.80%)	
occurrences (all)	17	4	
Epistaxis			
subjects affected / exposed	9 / 160 (5.63%)	3 / 143 (2.10%)	
occurrences (all)	9	3	
Sneezing			
subjects affected / exposed	7 / 160 (4.38%)	1 / 143 (0.70%)	
occurrences (all)	7	1	
Throat irritation			
subjects affected / exposed	6 / 160 (3.75%)	0 / 143 (0.00%)	
occurrences (all)	6	0	
Oropharyngeal pain			
subjects affected / exposed	3 / 160 (1.88%)	1 / 143 (0.70%)	
occurrences (all)	3	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 July 2020	<p>Defined the separation between NODE 301 Part 2 (RAPID) and NODE-301 Part 1 (conducted under Protocol Versions 5.0 and earlier).</p> <p>Introduced changes into RAPID, including study design changes affecting patient dosing and treatment periods, refinement of the eligibility criteria, and changes to the primary efficacy endpoint and to the statistical methods.</p>
01 March 2021	<p>Allowed all Screening Visit procedures and Test Dose Randomization Visits to be conducted on the same day.</p>
14 January 2022	<p>Modified requirements after questions raised by the BfArM: The following updates were made to the amended protocol:</p> <p>Procedures in Case of Emergency or Serious Adverse Event Reporting was revised with updated contact information</p> <p>Study Description and Site Study Procedures were revised to add precision related to when the Test Dose Randomization Visit could not be performed within 28 days of the Screening visit, that missing Follow-up visits was considered a protocol deviation, and to the window for the final study visit.</p> <p>Selection and Withdrawal of Patients was updated to revise one inclusion criterion, clarify one exclusion criterion, and revise one exclusion criterion.</p> <p>Study Treatments was revised to correct the emergency unblinding procedure.</p> <p>Safety Assessments was revised to clarify the reporting of AESIs, clarify procedures for SAEs related to PSVT, to align the reporting language with the German law, to update the contact information for the Medical Monitors</p> <p>Statistics was revised to clarify the definition of the Test Dose Only population and remove the estimators related to safety assessments from the primary efficacy section.</p> <p>Investigator Requirements and Quality Control was updated with a statement related to the obligation to publish the results of the clinical trial.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
