

Clinical trial results:

A phase II trial assessing nivolumab in strong class II expressing microsatellite stable colorectal cancer

Summary

EudraCT number	2018-000318-39
Trial protocol	GB
Global end of trial date	27 November 2024

Results information

Result version number	v1 (current)
This version publication date	13 May 2026
First version publication date	13 May 2026

Trial information

Trial identification

Sponsor protocol code	RG_17-215
-----------------------	-----------

Additional study identifiers

ISRCTN number	ISRCTN40245896
ClinicalTrials.gov id (NCT number)	NCT03981146
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 February 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 November 2024
Global end of trial reached?	Yes
Global end of trial date	27 November 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial is to detect the rate of durable clinical benefit in patients with strong class II expressing Micro Satellite Stable Colorectal Cancer treated with single agent nivolumab, to justify further investigation in subsequent studies.

Protection of trial subjects:

The Trial Steering Committee (TSC) provides overall supervision for the trial on behalf of the Trial Sponsor (University of Birmingham) and to ensure that the trial is conducted to the rigorous standards set out in the GCP standards. In particular, the TSC will concentrate on progress of the trial, adherence to the protocol, patient safety, evidence on main efficacy outcome measures and the consideration of new information of relevance to the research question. The safety and well-being of the trial participants are the most important considerations and should prevail over the interests of science and society. The TSC will provide advice, through its Chair, to the Chief Investigator and the University of Birmingham on all appropriate aspects of the trial. Membership of the TSC includes an independent Chair and two other independent members, who do not sit on the TMG, including a Patient, Public & Involvement (PPI) representative. The TSC will be asked to comment in detail on substantial changes to the protocol. The TSC will meet as often as required, at least once per year during recruitment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 August 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 35
Worldwide total number of subjects	35
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	12
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The trial opened to recruitment on 28th August 2019 with the first patient screened on 4th September 2019 and the first patient registered on 3rd August 2020. The last patient was recruited on 5th August 2021 and the trial closed to recruitment on 6th September 2021.

Pre-assignment

Screening details:

464 patients consented for determination of microsatellite (MSS) & class II status. 457 provided a screening biopsy for testing, which was performed centrally at Queen Elizabeth Hospital Birmingham (University Hospitals Birmingham NHS Foundation Trust). This was successful in 444 (97%) patients, 58 were confirmed to have MSS class II expression.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Nivolumab
-----------	-----------

Arm description:

Nivolumab will be administered as a 60 minute IV infusion, with a window of -5 and +10 minutes, at a flat dose of 480mg. A dosing interval every 4 weeks (Q4W) was employed. Patients could receive nivolumab for a maximum of 2 years, or until disease progression, unacceptable toxicity or withdrawal of consent. With the first dose, cycle 1 day 1, to be given within 7 days of registration to the trial.

Arm type	Experimental
Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	Opdivo
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was provided as vials containing 10 mg/mL concentrate of drug substance in solution for infusion. Administered as a 60 minute IV infusion, with a window of -5 and +10 minutes, at a flat dose of 480mg. A dosing interval every 4 weeks (Q4W) was employed. Patients could receive nivolumab for a maximum of 2 years, or until disease progression, unacceptable toxicity or withdrawal of consent. With the first dose, cycle 1 day 1, to be given within 7 days of registration to the trial.

Number of subjects in period 1	Nivolumab
Started	35
Completed	35

Baseline characteristics

Reporting groups

Reporting group title	Overall trial
Reporting group description: -	

Reporting group values	Overall trial	Total	
Number of subjects	35	35	
Age categorical			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	23	23	
From 65-84 years	12	12	
85 years and over	0	0	
Age continuous			
Units: years			
median	63		
full range (min-max)	37 to 81	-	
Gender categorical			
Units: Subjects			
Female	16	16	
Male	19	19	
Primary Cancer Stage			
Units: Subjects			
Ascending colon	4	4	
Descending colon	3	3	
Transverse colon	2	2	
Sigmoid colon	14	14	
Rectum	12	12	
Primary Resection Performed			
Units: Subjects			
No	7	7	
Yes	28	28	
RAS Mutations			
Units: Subjects			
KRAS	16	16	
NRAS	3	3	
BRAF	1	1	
Not Known	15	15	
ECOG Performance Status			
Units: Subjects			
PS 0	11	11	

PS 1	23	23	
Not Known	1	1	
Smoking Status			
Units: Subjects			
Never smoked	22	22	
Ex-smoker	12	12	
Current smoker	1	1	
Previous Lines of Therapy			
Units: Lines of Therapy			
median	6		
full range (min-max)	1 to 16	-	
Smoking Pack Years			
Pack years measure a person's cumulative exposure to cigarette smoke, calculated by multiplying the number of packs smoked per day by the number of years smoked. For example, Smoking 1 pack per day for 20 years equals 20 pack years.			
Units: Pack Years			
median	5		
full range (min-max)	0 to 16	-	
Smoking Stopped Years			
For ex-smokers, this is the number of years ago that the patient stopped smoking. This measure only applies to patients who are ex-smokers (12 patients), however, only 10 patients provided this data. Patients who never smoked or currently smoke are not included - see baseline characteristic "Smoking Status".			
Units: Years			
median	30		
full range (min-max)	4 to 50	-	

End points

End points reporting groups

Reporting group title	Nivolumab
-----------------------	-----------

Reporting group description:

Nivolumab will be administered as a 60 minute IV infusion, with a window of -5 and +10 minutes, at a flat dose of 480mg. A dosing interval every 4 weeks (Q4W) was employed. Patients could receive nivolumab for a maximum of 2 years, or until disease progression, unacceptable toxicity or withdrawal of consent. With the first dose, cycle 1 day 1, to be given within 7 days of registration to the trial.

Primary: Durable Clinical Benefit

End point title	Durable Clinical Benefit ^[1]
-----------------	---

End point description:

Patient will be defined as experiencing DCB if they remain free of disease progression at their third trial specific CT scan since treatment start date (i.e. at approximately 27 weeks) or at any CT scan after 27 weeks that shows the patient remains free of disease progression

End point type	Primary
----------------	---------

End point timeframe:

Beginning of trial treatment to free of disease progression (104 weeks maximum)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There is no statistical comparison for this single arm trial. The median of the posterior probability distribution for the true DCB rate was used to provide a Bayesian estimate of the DCB rate and 95% CrI. The analysis conducted was a beta-binomial conjugate analysis using a Beta(1, 1) prior, this resulted in a bayesian estimate of DCB of 0.11 (95% CrI: 0.03, 0.22). 3 patients who reported durable clinical benefit, this resulted in a 0.002 probability that the true DCB rate was \geq to 30%.

End point values	Nivolumab			
Subject group type	Reporting group			
Number of subjects analysed	35			
Units: Patients				
DCB	3			
Non-DCB	32			

Statistical analyses

No statistical analyses for this end point

Secondary: Objective Response

End point title	Objective Response
-----------------	--------------------

End point description:

Per Response Evaluation Criteria In Solid Tumors Criteria (RECIST v1.1) assessed by CT scan, objective response is the occurrence of Complete Response (CR) or Partial Response (PR) as the best overall response. Best overall response is the combined evaluation of target and non-target lesions, as provided in the protocol appendix 3.

Target lesions are evaluated as Complete Response (CR; disappearance of all target lesions), Partial Response (PR; $\geq 30\%$ decrease in the sum of the longest diameter), Progressive Disease (PD; $\geq 20\%$

increase in the sum of the longest diameter) or Stable Disease (SD; insufficient shrinkage for PR or insufficient increase for PD).

Non-target lesions are evaluated as Complete Response (CR; disappearance of all non-target lesions), Incomplete Response/Stable Disease (SD; persistence of non-target lesions) or Progressive Disease (PD; new lesions and/or progression of existing non-target lesions).

End point type	Secondary
----------------	-----------

End point timeframe:

Trial treatment until disease progression (104 weeks maximum)

End point values	Nivolumab			
Subject group type	Reporting group			
Number of subjects analysed	35			
Units: Patients				
Objective Response Not Achieved	35			
Objective Response Achieved	0			

Statistical analyses

No statistical analyses for this end point

Secondary: Best Percentage Change in Sum of Target Lesions

End point title	Best Percentage Change in Sum of Target Lesions
-----------------	---

End point description:

At each evaluation, the longest diameters of all selected target lesions will be measured and summed and the percentage change from the baseline measurement will be calculated. The best percentage change is the one that reflects either the greatest decrease or the least increase over the whole period of assessment.

End point type	Secondary
----------------	-----------

End point timeframe:

Trial Treatment to disease progression (104 weeks maximum)

End point values	Nivolumab			
Subject group type	Reporting group			
Number of subjects analysed	30 ^[2]			
Units: Percentage change				
arithmetic mean (standard deviation)	21.1 (± 18)			

Notes:

[2] - Only 30 had CT scans following baseline assessment, so this outcome could not be measured for 5 pts.

Statistical analyses

No statistical analyses for this end point

Secondary: Progression free survival time

End point title	Progression free survival time
-----------------	--------------------------------

End point description:

This is defined as the time from commencement of trial treatment to the date of CT scan when progressive disease first recorded or date of death without previously recorded progression.

End point type	Secondary
----------------	-----------

End point timeframe:

Time from commencement of trial treatment to the date of CT scan when progressive disease first recorded (104 weeks maximum)

End point values	Nivolumab			
Subject group type	Reporting group			
Number of subjects analysed	35			
Units: Weeks				
median (confidence interval 95%)	9 (8.7 to 9.7)			

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival Time

End point title	Overall Survival Time
-----------------	-----------------------

End point description:

This is defined as the time from commencement of trial treatment to the date of death from any cause.

End point type	Secondary
----------------	-----------

End point timeframe:

Commencement of trial treatment until date of death; minimum of 18 months post-registration, if trial treatment was discontinued early, or up to 24 months post-registration for those completing trial treatment.

End point values	Nivolumab			
Subject group type	Reporting group			
Number of subjects analysed	35			
Units: Months				
median (confidence interval 95%)	7.2 (4.0 to 11.9)			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the date of trial consent until 6 months after treatment discontinuation. If at the 6 month review time-point, any toxicities at grade 2 or higher related to trial treatment were still occurring, these were to be followed up until resolution.

Assessment type	Systematic
