Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 December 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study was to evaluate the effects of etokimab (ANB020) on skin lesions.

Protection of trial subjects:

This study was conducted in accordance with the protocol and with the following:

- Consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines;
- Applicable International Council for Harmonisation Good Clinical Practice Guidelines;
- Applicable laws and regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	United States: 134
Country: Number of subjects enrolled	Germany: 19
Country: Number of subjects enrolled	Poland: 47
Country: Number of subjects enrolled	Czechia: 46
Country: Number of subjects enrolled	United Kingdom: 35
Worldwide total number of subjects	302
EEA total number of subjects	112

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	279
From 65 to 84 years	23
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted in adults with moderate to severe atopic dermatitis (AD). Subjects were randomized on Day 1 to 1 of 5 treatment groups in a 1:1:1:1:1 ratio.

Pre-assignment

Screening details:

The study had a screening period of up to 4 weeks (Week -4 to 0) prior to administration of study drug on Day 1, treatment period of 16 weeks (Week 0 to 16), and safety follow-up period of 8 weeks (Week 16 to 24).

Period 1

Period 1 title	Randomization Through Start of Treatment
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects randomized to receive matching placebo administered subcutaneously (SC) once every 4 weeks (Q4W) for up to 16 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Arm title	Etokimab 20 mg Q4W
------------------	--------------------

Arm description:

Subjects randomized to receive etokimab 20 milligrams (mg) administered SC Q4W for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Arm title	Etokimab 300 mg load + 150 mg Q8W
------------------	-----------------------------------

Arm description:

Subjects randomized to receive etokimab 150 mg administered SC once every 8 weeks (Q8W) following an initial 300 mg loading dose for up to 16 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Arm title	Etokimab 300 mg load + 150 mg Q4W
------------------	-----------------------------------

Arm description:

Subjects randomized to receive etokimab 150 mg administered SC Q4W following an initial 300 mg loading dose for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Arm title	Etokimab 600 mg load + 300 mg Q4W
------------------	-----------------------------------

Arm description:

Subjects randomized to receive etokimab 300 mg administered SC Q4W following an initial 600 mg loading dose for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Number of subjects in period 1	Placebo	Etokimab 20 mg Q4W	Etokimab 300 mg load + 150 mg Q8W

Period 2

Period 2 title	Treatment Through End of Study
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Matching placebo was administered SC Q4W for up to 16 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was formulated as a sterile solution in single use glass vials containing 1.2 milliliters (mL) of solution.

Arm title	Etokimab 20 mg Q4W
------------------	--------------------

Arm description:

Etokimab 20 mg was administered SC Q4W for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Etokimab was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

Arm title	Etokimab 300 mg load + 150 mg Q8W
------------------	-----------------------------------

Arm description:

Etokimab 150 mg was administered SC Q8W following an initial 300 mg loading dose for up to 16 weeks. At Weeks 4 and 12, the subjects received a placebo dose.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

Arm title	Etokimab 300 mg load + 150 mg Q4W
------------------	-----------------------------------

Arm description:

Etokimab 150 mg was administered SC Q4W following an initial 300 mg loading dose for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Etokimab was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

Arm title	Etokimab 600 mg load + 300 mg Q4W
------------------	-----------------------------------

Arm description:

Etokimab 300 mg was administered SC Q4W following an initial 600 mg loading dose for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Etokimab was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Period 1 presents data for all subjects randomized until the start of treatment and Period 2, presents data for all subjects who received study drug. Baseline characteristics are based on subjects who were randomized and who received even a partial dose of study drug; Period 2 is therefore the baseline period.

Number of subjects in period 2^[2]	Placebo	Etokimab 20 mg Q4W	Etokimab 300 mg load + 150 mg Q8W

Sponsor decision	1	-

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Period 1 presents data for all subjects randomized until the start of treatment and Period 2, presents data for all subjects who received study drug. Baseline characteristics are based on subjects who were randomized and who received even a partial dose of study drug; Period 2 is therefore the baseline period.

Primary: Percent Change from Baseline in Eczema Area and Severity Index (EASI) Score

End point title	Percent Change from Baseline in Eczema Area and Severity Index (EASI) Score
End point description: The EASI is an Investigator assessment measuring the severity of clinical signs in AD. The EASI is considered one of the best validated outcome measures for AD. The EASI score assesses the severity and extent of erythema; induration, papulation, and edema; excoriations; and lichenification. The EASI scores range from 0 to 72, with higher scores indicating greater severity and extent of AD. The full analysis set included all randomized subjects who received 1 dose of etokimab or placebo and had baseline and post-baseline EASI scores.

Secondary: Percent Change from Baseline in Severity Scoring of Atopic Dermatitis (SCORAD) Scores

End point title	Percent Change from Baseline in Severity Scoring of Atopic Dermatitis (SCORAD) Scores
-----------------	---

End point description:

The SCORAD index, a validated assessment of AD, was developed to standardize the evaluation of the extent and severity of AD.

There are 3 components to the assessment:

- A: extent or affected BSA, assessed as a percentage of each defined body area and reported as the sum of all areas;

- B: severity of 6 specific symptoms of AD (redness, swelling, oozing/crusting, excoriation, skin thickening/lichenification, and dryness) is assessed using the following scale: none (0), mild (1), moderate (2), or severe (3);

- C: subjective assessment of itch and sleeplessness is recorded for each symptom by the subject on a visual analog scale (VAS), where 0 is no itch (or sleeplessness) and 10 is the worst imaginable itch (or sleeplessness).

The SCORAD score is calculated as: $A/5 + 7B/2 + C$. The maximum score is 103.

The full analysis set included all randomized subjects who received 1 dose of etokimab or placebo and had baseline and post-baseline EASI scores.

Secondary: Change from Baseline in Dermatology Life Quality Index (DLQI)	
End point title	Change from Baseline in Dermatology Life Quality Index (DLQI)

End point description:

The DLQI is a 10-item, validated questionnaire used in clinical trials to assess the impact of AD disease symptoms and treatment on quality of life. The format is a simple response (0 to 3 where 0 is "not at all" and 3 is "very much") to 10 questions, which assess quality of life (QoL) over the past week, with an overall scoring system of 0 to 30; a high score is indicative of a poor QoL. The questionnaire was administered only to the subset of subjects who can read and understand a language in which questionnaire is presented (based on availability of validated translations in participating countries). The full analysis set included all randomized subjects who received 1 dose of etokimab or placebo and had baseline and post-baseline EASI scores.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 October 2018	Updates included: <ul style="list-style-type: none">- Resolution of key comments and requests from respective Regulatory Agencies/Health Authorities;- Procedures were clarified;- Alignment with the Common Protocol Template;- Minor grammatical, editorial, formatting, and administrative changes not affecting the conduct of the study have been incorporated into this amendment for clarification and administrative purposes only.
02 July 2019	Updates to the statistical approach to data analysis included: <ul style="list-style-type: none">- Secondary endpoints were reorganized;- Some previously secondary endpoints were reclassified as exploratory;- Some previously exploratory endpoints were reclassified as secondary;- Timepoints were clarified for some endpoints;- An interim analysis was introduced for analysis of efficacy data at Week 16 and safety data collected as of the date of the data cut-off.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
