

## Clinical trial results:

### A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Dose-Ranging Study Investigating the Efficacy, Safety, and Pharmacokinetic Profile of ANB020 Administered to Adult Subjects With Moderate-to-Severe Atopic Dermatitis

#### Summary

EudraCT number	2018-000331-27
Trial protocol	GB DE CZ PL
Global end of trial date	03 December 2019

#### Results information

Result version number	v2 (current)
This version publication date	01 June 2023
First version publication date	26 March 2021
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li><li>Minor updates made for consistency.</li></ul>

#### Trial information

##### Trial identification

Sponsor protocol code	ANB020-005
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03533751
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 December 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 December 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study was to evaluate the effects of etokimab (ANB020) on skin lesions.

Protection of trial subjects:

This study was conducted in accordance with the protocol and with the following:

- Consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines;
- Applicable International Council for Harmonisation Good Clinical Practice Guidelines;
- Applicable laws and regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	United States: 134
Country: Number of subjects enrolled	Germany: 19
Country: Number of subjects enrolled	Poland: 47
Country: Number of subjects enrolled	Czechia: 46
Country: Number of subjects enrolled	United Kingdom: 35
Worldwide total number of subjects	302
EEA total number of subjects	112

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	279
From 65 to 84 years	23
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted at 75 centers in the United States, United Kingdom, Canada, Czech Republic, Germany, and Poland. The study enrolled adults with moderate to severe atopic dermatitis (AD). The study included a treatment period of 16 weeks (Week 0 to 16) followed by a safety follow-up for 8 weeks (Week 16 to Week 24).

### Pre-assignment

Screening details:

Participants were equally randomized on Day 1 to one of five treatment groups. Two participants in the etokimab 300 mg/placebo 150 mg subcutaneous (SC) every 8 weeks (Q8W) group were randomized to treatment but never received treatment (1 participant withdrew consent prior to dosing and 1 participant was lost to follow-up prior to dosing).

### Period 1

Period 1 title	Overall Study Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants received matching placebo to etokimab, administered SC Q4W for up to 16 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was formulated as a sterile solution in single use glass vials containing 1.2 milliliters (mL) of solution.

<b>Arm title</b>	Etokimab 20 mg SC Q4W
------------------	-----------------------

Arm description:

Participants received etokimab 20 milligrams (mg) administered SC every 4 weeks (Q4W) for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Etokimab was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

<b>Arm title</b>	Etokimab 300 mg / 150 mg SC Q8W
------------------	---------------------------------

Arm description:

Participants received a 300 mg loading dose of etokimab on Day 1 then 150 mg etokimab administered SC Q8W for up to 16 weeks. At Weeks 4 and 12 participants received placebo.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Etokimab was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

<b>Arm title</b>	Etokimab 300 mg / 150 mg SC Q4W
------------------	---------------------------------

Arm description:

Participants received a 300 mg loading dose of etokimab on Day 1 then 150 mg etokimab administered SC Q4W for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Etokimab was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

<b>Arm title</b>	Etokimab 600 mg / 300 mg SC Q4W
------------------	---------------------------------

Arm description:

Participants received a 600 mg loading dose of etokimab on Day 1 then 300 mg etokimab administered SC Q4W for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Etokimab
Investigational medicinal product code	ANB020
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Etokimab was formulated as a sterile solution in single use glass vials containing 1.2 mL of solution.

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number enrolled includes all participants randomized (ie, 302 participants) to treatment. Two participants were randomized but never received study drug. Baseline period is based on participants who were randomized and who received study drug (ie, 300 participants).

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants received matching placebo to etokimab, administered SC Q4W for up to 16 weeks.	
Reporting group title	Etokimab 20 mg SC Q4W
Reporting group description:	
Participants received etokimab 20 milligrams (mg) administered SC every 4 weeks (Q4W) for up to 16 weeks.	
Reporting group title	Etokimab 300 mg / 150 mg SC Q8W
Reporting group description:	
Participants received a 300 mg loading dose of etokimab on Day 1 then 150 mg etokimab administered SC Q8W for up to 16 weeks. At Weeks 4 and 12 participants received placebo.	
Reporting group title	Etokimab 300 mg / 150 mg SC Q4W
Reporting group description:	
Participants received a 300 mg loading dose of etokimab on Day 1 then 150 mg etokimab administered SC Q4W for up to 16 weeks.	
Reporting group title	Etokimab 600 mg / 300 mg SC Q4W
Reporting group description:	
Participants received a 600 mg loading dose of etokimab on Day 1 then 300 mg etokimab administered SC Q4W for up to 16 weeks.

## Secondary: Number of Participants With a 90% Reduction From Baseline in Eczema Area and Severity Index Score (EASI 90 Response) at Week 16

End point title	Number of Participants With a 90% Reduction From Baseline in
-----------------	--

End point description:

EASI measures the extent and severity of atopic eczema based on assessments of 4 body regions: head/neck, trunk, upper limbs and lower limbs. For each region the percentage of skin affected and the severity (scored as none [0], mild [1], moderate [2], or severe [3]) for symptoms such as redness (erythema), thickness (induration, papulation, and edema), scratching (excoriation), and lichenification (lined skin) are assessed. Total score is calculated by summing the EASI scores of 6 symptoms across 4 body regions. The EASI score ranges from 0 (no disease) to 72 (worse disease). Full Analysis Set. Participants with missing data were counted as non-responders.

End point type Secondary

### Secondary: Number of Participants Who Achieved a Reduction of $\geq 2$ Points From Baseline in the Validated Investigator's Global Assessment for Atopic Dermatitis (vIGA-AD) at Week 16

End point title	Number of Participants Who Achieved a Reduction of $\geq 2$ Points From Baseline in the Validated Investigator's Global Assessment for Atopic Dermatitis (vIGA-AD) at Week 16
-----------------	---

End point description:

The vIGA-AD is a static 5-point scale to evaluate AD severity globally:

0: Clear - No inflammatory signs of AD (no erythema, no induration/papulation, no lichenification, no oozing/crusting). Postinflammatory hyperpigmentation and/or hypopigmentation may be present

1: Almost clear - Barely perceptible erythema, barely perceptible induration/papulation, and/or minimal lichenification. No oozing or crusting

2: Mild - Slight but definite erythema (pink), slight but definite induration/papulation, and/or slight but definite lichenification. No oozing or crusting

3: Moderate - Clearly perceptible erythema (dull red), clearly perceptible induration/papulation, and/or clearly perceptible lichenification. Oozing and crusting may be present

4: Severe - Marked erythema (deep or bright red), marked induration/papulation, and/or marked lichenification. Disease is widespread in extent. Oozing or crusting may be present.

Number of participants with  $\geq 2$  points reduction in vIGA-AD is presented.

## Secondary: Percent Change From Baseline in Scoring Atopic Dermatitis (SCORAD) Score at Week 16

End point title	Percent Change From Baseline in Scoring Atopic Dermatitis (SCORAD) Score at Week 16
-----------------	---

End point description:

SCORAD is a clinical tool used to assess the extent and severity of eczema (SCORing Atopic Dermatitis). The extent is assessed using the rule of 9 to calculate the affected area (A) as extent of disease (0 [no disease]-102 [worst disease]). The intensity part of the SCORAD (B) consists of 6 items: erythema, oedema/papulation, excoriations, lichenification, oozing/crusts and dryness, each graded on a scale from 0 (none) to 3 (severe), for a total score of 0 (none) to 18 (severe intensity). Subjective items (C) include daily pruritus and sleeplessness, each scored on a visual analogue scale (VAS) from 0 to 10 (itch: 0 [no itch] to 10 [worst imaginable itch] and sleeplessness: 0 [no sleeplessness] to 10 [worst imaginable sleeplessness]) (total score 0-20). SCORAD is calculated as  $A/5 + 7B/2 + C$ , and ranges from 0 (no AD present) to 103.4 (worst). Full Analysis Set. Missing data were imputed using multiple imputation.

## Secondary: Change From Baseline in Dermatology Life Quality Index (DLQI) Score at Week 16

End point title	Change From Baseline in Dermatology Life Quality Index (DLQI) Score at Week 16
-----------------	--

End point description:

The DLQI is a 10-item validated questionnaire used to assess the impact of AD disease symptoms and treatment on quality of life (QoL). It consists of 10 questions evaluating impact of skin diseases on different aspects of a participant's QoL over the prior week, including symptoms and feelings, daily activities, leisure, work or school, personal relationships, and the side effects of treatment. Each item is scored on a 4-point scale (0 = not at all/not relevant; 1 = a little; 2 = a lot; and 3 = very much). Item scores are added to provide a total score, ranging from 0 to 30, with higher scores indicating greater impairment of QoL. A negative change from Baseline indicates improvement. Full Analysis Set with available data were analyzed. Missing data were imputed using multiple imputation.

End point type	Secondary

## Secondary: Number of Participants Who Experienced an Adverse Event (AE)

End point title	Number of Participants Who Experienced an Adverse Event (AE)
-----------------	--

End point description:

An AE is any untoward medical occurrence in a clinical trial participant, temporally associated with the use of study treatment, whether or not considered related to the study treatment. A treatment-emergent adverse event (TEAE) is any AE that started or worsened in severity on or after the date and time of the study drug administration. A serious adverse event (SAE) is as any untoward medical occurrence that, at any dose:

- Results in death;
- Is life-threatening;
- Requires inpatient hospitalization or prolongation of existing hospitalization;
- Results in persistent disability/incapacity;
- Is a congenital anomaly/birth defect.

The safety analysis set included all randomized subjects who received 1 dose of etokimab or placebo.

End point type	Secondary

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 October 2018	Updates included: <ul style="list-style-type: none"><li>- Resolution of key comments and requests from respective Regulatory Agencies/Health Authorities;</li><li>- Procedures were clarified;</li><li>- Alignment with the Common Protocol Template;</li><li>- Minor grammatical, editorial, formatting, and administrative changes not affecting the conduct of the study have been incorporated into this amendment for clarification and administrative purposes only.</li></ul>
02 July 2019	Updates to the statistical approach to data analysis included: <ul style="list-style-type: none"><li>- Secondary endpoints were reorganized;</li><li>- Some previously secondary endpoints were reclassified as exploratory;</li><li>- Some previously exploratory endpoints were reclassified as secondary;</li><li>- Timepoints were clarified for some endpoints;</li><li>- An interim analysis was introduced for analysis of efficacy data at Week 16 and safety data collected as of the date of the data cut-off.</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
