Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 October 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 September 2020
Global end of trial reached?	Yes
Global end of trial date	22 September 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of edasalonexent as measured by change from Baseline (CFB) on North Star Ambulatory Assessment (NSAA) Total Score in pediatric patients with Duchenne muscular dystrophy (DMD)

Protection of trial subjects:

This study was conducted in accordance with the protocol, Health Insurance Portability and Accountability Act (HIPAA) regulations, Food and Drug Administration (FDA) GCP Regulations (21 CFR Parts 50, 56, and 312) and ICH guidelines for GCP (E6) and clinical safety data management (E2A), and the ethical principles that had their origin in the Declaration of Helsinki. The study was conducted in accordance with applicable local law(s) and regulation(s).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 October 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	Ireland: 4
Country: Number of subjects enrolled	United States: 84
Country: Number of subjects enrolled	Canada: 10
Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Australia: 6
Worldwide total number of subjects	131
EEA total number of subjects	16

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	131
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a multi-center study conducted by 37 principal investigators at 37 study centers in 8 countries (United States, Canada, United Kingdom, Germany, Ireland, Israel, Sweden, and Australia).

Pre-assignment

Screening details:

A total of 151 patients were screened of which 20 failed screening. 131 patients who participated in the study included 126 randomized patients and 5 participants who were dosed siblings of previously randomized patients.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Patients were randomized to receive edasalonexent 100 mg/kg/day (administered as approximately 33 mg/kg TID) or placebo in double-blind fashion daily for 52 weeks. Patients, investigators, study staff, and the Sponsor were blinded to study drug assignment. Prior to scheduled unblinding, if an emergency required the identity of the IP to be known by the Investigator in order to provide appropriate medical treatment, the Investigator was allowed to unblind using the Interactive Web Response System

Arms

Are arms mutually exclusive?	Yes
Arm title	Dose 1

Arm description:

Edasalonexent 100 mg/kg/day. Capsules taken by mouth three times per day.

Arm type	Experimental
Investigational medicinal product name	Edasalonexent
Investigational medicinal product code	
Other name	Edasa, CAT-1004
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received Edasalonexent 100 mg/kg/day. Capsules taken by mouth three times per day for 52 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Matching placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received a placebo capsules taken by mouth three times per day for 52 weeks.

Number of subjects in period 1	Dose 1	Placebo
Started	88	43
Completed	85	37
Not completed	3	6
Consent withdrawn by subject	1	-
Physician decision	-	1
Adverse event, non-fatal	1	-
Starting another treatment	-	1
Progressive Disease	1	-
Non-compliance with study drug	-	1
Lost to follow-up	-	2
Non-compliance with study procedure	-	1

Baseline characteristics

Reporting groups

Reporting group title	Dose 1
Reporting group description: Edasalonexent 100 mg/kg/day. Capsules taken by mouth three times per day.	
Reporting group title	Placebo
Reporting group description: Matching placebo	

Reporting group values	Dose 1	Placebo	Total
Number of subjects	88	43	131
Age categorical			
Safety Population: All patients who received at least 1 dose of study drug, with patients analyzed based on the actual study treatment received. This included the set of patients who were assigned the same treatment as their randomized sibling.			
Units: Subjects			
Children (2-11 years)	88	43	131
Age continuous			
Safety Population: All patients who received at least 1 dose of study drug, with patients analyzed based on the actual study treatment received. This included the set of patients who were assigned the same treatment as their randomized sibling.			
Units: years			
arithmetic mean	5.65	5.77	
standard deviation	± 1.048	± 0.995	-
Gender categorical			
Safety Population: All patients who received at least 1 dose of study drug, with patients analyzed based on the actual study treatment received. This included the set of patients who were assigned the same treatment as their randomized sibling.			
Units: Subjects			
Female	0	0	0
Male	88	43	131
Ethnicity			
Safety Population: All patients who received at least 1 dose of study drug, with patients analyzed based on the actual study treatment received. This included the set of patients who were assigned the same treatment as their randomized sibling.			
Units: Subjects			
Hispanic or Latino	14	6	20
Not Hispanic or Latino	69	35	104
Unknown or Not Reported	5	2	7
Race			
Safety Population: All patients who received at least 1 dose of study drug, with patients analyzed based on the actual study treatment received. This included the set of patients who were assigned the same treatment as their randomized sibling.			
A patient who reported more than 1 race was categorized as multiracial.			
Units: Subjects			
American Indian or Alaska Native	0	0	0
Asian	3	2	5
Native Hawaiian or Other Pacific Islander	1	0	1
Black or African American	4	1	5
White	74	38	112

More than one race	3	1	4
Unknown or Not Reported	2	1	3
Missing-Race	1	0	1

End points

Primary: Change From Baseline in North Star Ambulatory Assessment (NSAA)

End point title	Change From Baseline in North Star Ambulatory Assessment (NSAA)
-----------------	---

End point description:

To assess change from baseline in NSAA Total Score at Week 52. NSAA is a clinician-reported outcome instrument designed to measure ambulatory function in males with DMD. Patients asked to perform 17 different functional activities, including a 10MWT, rising from sit to stand, standing on one leg, climbing and descending a step, stand from supine, lifting the head, standing on heels, and jumping. Each function activity will be scored as 0=(unable to achieve independently), scored as 1=(modified method but achieves goal independent of physical assistance from another), or scored as 2 =(no obvious modification of activity) or "Not Scored". If the NSAA test was performed and any of the individual items are scored as "not scored" (i.e., for reasons unrelated to the patients physical capabilities), corresponding total score will be set to missing. sum of 17 scores will be used to form an ordinal total score (range 0 – 34).

Full Analysis population

End point type	Primary
End point timeframe: Baseline (Day 1) to Week 52	

End point values	Dose 1	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	81	38		
Units: score on a scale				
arithmetic mean (standard deviation)	-1.5 (± 4.41)	-1.8 (± 3.81)		

Statistical analyses

Statistical analysis title	Change From Baseline in NSAA
Statistical analysis description: Full Analysis population	
Comparison groups	Dose 1 v Placebo

Number of subjects included in analysis	119
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.6705 ^[2]
Method	ANCOVA

Notes:

[1] - The model includes change from baseline in the NSAA Total Score as the dependent variable, treatment, visit, and treatment-by-visit interaction as fixed effects, with baseline age, time to stand from supine, region (North America vs. Europe/Asia/Australia), and baseline NSAA score as covariates (including a by-visit interaction term for each covariate), and patient as a random effect.

[2] - Least Squares means, p-values from mixed-model repeated-measures(MMRM) ANCOVA.

Secondary: Change From Baseline in 10-meter Walk/Run Test

End point title	Change From Baseline in 10-meter Walk/Run Test
-----------------	--

End point description:

To assess the changes from baseline to Week 52 on the 10-meter walk/run test (10MWT). For timed function tests (TFTs), the time will be set to 12 seconds and the speed to 0 if the TFT assessment meets the following TFT grading criteria. Grade of 1 or 2 (from a 6-point scale). 1=Unable to walk independently 2=Unable to walk independently but can walk with knee-ankle foot orthoses or support from a person 3=Highly adapted wide based lordotic gait. Cannot increase walking speed 4=Moderately adapted gait. Can pick up speed but cannot run 5=Able to pick up speed, but runs with a double stance phase, i.e. cannot achieve both feet off the ground 6=Runs and gets both feet off the ground (with no double stance phase)

Full Analysis population: All patients in the Randomized Population who received at least 1 dose of study drug and provided at least 1 valid post Baseline NSAA efficacy assessment.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to Week 52

Adverse event reporting additional description:

A treatment-emergent Adverse Events (TEAE) is any Adverse Events that newly appeared, increased in frequency or worsened in severity following initiation of study drug administration. Subjects with more than one AE of the same system organ class (SOC) / preferred term (PT) were counted only once for that SOC / PT.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 April 2020	<p>The amendment included the following key changes in response to the COVID-19 pandemic:</p> <ul style="list-style-type: none">• As patients may not have been able to come on-site for visits or for a reduced amount of time, modifications were made to the original study procedures and schedule of assessments to reduce the patient's risk or exposure to COVID-19 for Week 39 and Week 52 study visits. The modifications included:<ul style="list-style-type: none">- Allowance for the Week 52 visit to be conducted out of the visit window (but in no case should the projected target date have been changed by more than 2 months).- Ability to perform study procedures either on site or remotely by using alternative approaches to collect study assessments.- Remote assessment for AEs and concomitant medications, as the top priority was safety.- Ability to defer other safety assessments, including physical examinations, chemistry and hematology labs and urinalysis for 6-month intervals if not feasible, based on the safety profile of edasalonexent to date and the consideration that all patients in this study had been on study drug for 6 months.- Allowance for drug dispensation to take place according to local site procedures, including secured, temperature-controlled shipments to the patients' homes• A prioritized list of assessments has been included in Appendix of the protocol.• Clarification that post the COVID-19 pandemic, clinical monitoring may resume at amore intense pace to clean all data accumulated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
