

Clinical trial results:

A Randomized, Double-Blind, Double-Dummy, Placebo-Controlled, 3-Arm, Parallel-Group Study in Pediatric Subjects Aged 10 Through 17 Years to Evaluate the Efficacy and Safety of BG00012 and BIIB017 for the Treatment of Relapsing-Remitting Multiple Sclerosis

Summary

EudraCT number	2018-000516-22
Trial protocol	PT EE HU
Global end of trial date	21 July 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 July 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	21 July 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The objective of the study is to evaluate the efficacy and safety of Dimethyl Fumarate (BG00012) and Peginterferon Beta-1a (BIIB017), both compared with placebo, in paediatric subjects with relapsing-remitting multiple sclerosis (RRMS).

Protection of trial subjects:

Written informed consent was obtained from each subject or subject's legally authorized representative (e.g., legal guardian), as applicable, prior to evaluations performed for eligibility. Subjects or the subject's legally authorized representative were given adequate time to review the information in the informed consent/assent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 March 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Estonia: 4
Country: Number of subjects enrolled	Tunisia: 2
Country: Number of subjects enrolled	Turkey: 2
Country: Number of subjects enrolled	Jordan: 2
Country: Number of subjects enrolled	Taiwan: 1
Worldwide total number of subjects	11
EEA total number of subjects	4

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	11
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled at the investigative sites in Estonia, Tunisia, Turkey, Jordan and Taiwan from 19 March 2019 to 21 July 2022.

Pre-assignment

Screening details:

A total of 11 subjects were enrolled and treated in the study.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Dimethyl Fumarate 240 mg
------------------	--------------------------

Arm description:

Subjects received dimethyl fumarate 120 milligrams (mg) capsules twice daily (BID), orally for 7 days followed by 240 mg capsules, BID, orally for 95 weeks and peginterferon beta-1a matching placebo subcutaneous (SC) injection once every 2 weeks (Q2W) for up to 96 weeks.

Arm type	Experimental
Investigational medicinal product name	Dimethyl Fumarate
Investigational medicinal product code	
Other name	BG00012
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Dimethyl fumarate 120 mg capsules, BID, orally for 7 days followed by 240 mg capsules, BID, orally for 95 weeks.

Investigational medicinal product name	Peginterferon beta-1a matching placebo
Investigational medicinal product code	
Other name	BIIB017
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Peginterferon beta-1a matching placebo Q2W for up to 96 weeks.

Arm title	Peginterferon Beta-1a 125 µg
------------------	------------------------------

Arm description:

Subjects received peginterferon beta-1a, 63 micrograms (µg) on Day 1, 94 µg at Week 2, 125 µg SC injection Q2W from Week 4 up to 96 weeks and peginterferon beta-1a matching placebo SC injection, Q2W for up to 96 weeks.

Arm type	Experimental
Investigational medicinal product name	Peginterferon beta-1a matching placebo
Investigational medicinal product code	
Other name	BIIB017
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Peginterferon beta-1a matching placebo Q2W for up to 96 weeks.

Investigational medicinal product name	peginterferon beta-1a
Investigational medicinal product code	
Other name	BIIB017
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Peginterferon beta-1a, 63 µg on Day 1, 94 µg at Week 2, 125 µg SC injection Q2W from Week 4 up to 96 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Subjects received peginterferon beta-1a matching placebo SC injection Q2W and dimethyl fumarate matching placebo capsules BID, orally for up to 96 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Capsule
Routes of administration	Subcutaneous use, Oral use

Dosage and administration details:

Peginterferon beta-1a matching placebo SC injection, Q2W and dimethyl fumarate matching placebo capsules, BID, orally for up to 96 weeks.

Number of subjects in period 1	Dimethyl Fumarate 240 mg	Peginterferon Beta- 1a 125 µg	Placebo

Primary: Time to First Relapse

End point title	Time to First Relapse ^[1]
End point description: A clinical relapse is defined as new or recurrent neurological symptoms, not associated with fever, lasting for at least 24 hours, and followed by a period of 30 days of stability or improvement. Time to First Relapse is estimated by Kaplan Mayer method. "99999" signifies data is not available as no participant in this arm group had a relapse. ITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00012, BIIB017, or placebo). The overall number of subjects analysed signifies the number of subjects with relapse.	
End point type	Primary
End point timeframe: Baseline up to Week 96	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Only descriptive analysis is planned to be analysed.

Secondary: Number of Subjects With Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Adverse Events (AEs) and Serious Adverse Events (SAEs)
End point description: An AE was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. An SAE is an AE resulting in any of the following outcomes or deemed significant for any other reason: death; Initial or prolonged inpatient hospitalization; life threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Safety population included all subjects who had received at least 1 dose of study treatment.

Secondary: Number of New or Newly Enlarging T2 Hyperintense Lesions on Brain Magnetic Resonance Imaging (MRI) Scans at Weeks 48 and 96

End point title	Number of New or Newly Enlarging T2 Hyperintense Lesions on Brain Magnetic Resonance Imaging (MRI) Scans at Weeks 48 and 96
End point description: The number of new or newly enlarging T2 hyperintense lesions that developed in each subject assessed on magnetic resonance imaging (MRI) scans. The overall number of subjects analysed signifies number of subjects analysed in this endpoint and the number analysed 'n' signifies number of subjects analysed at a given timepoint. ITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00012, BIIB017, or placebo).

Secondary: Annualized Relapse Rate

End point title	Annualized Relapse Rate
End point description: A clinical relapse was defined as new or recurrent neurological symptoms, not associated with fever, lasting for at least 24 hours, and followed by a period of 30 days of stability or improvement. The relapse rate for an individual participant was calculated as the number of relapses for that participant divided by the number of participant-years followed. The ARR for each enrolment group was calculated as the total number of relapses experienced in the group divided by the total number of participant-years on the study. An unadjusted relapse rate is reported. ITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00012, BIIB017, or placebo).	
End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 June 2018	a) Excluded the subjects who had a low lymphocyte count following study withdrawal/completion from further follow-up, should they be initiated on appropriate MS treatment, according to local standard of care. b) Provision of open-label access to BG00012 (Tecfidera) for subjects who experienced a confirmed relapse at any point during the study or who had a high lesion burden on MRI at Week 48 until the end of their scheduled participation in the study if considered suitable by the treating neurologist.
09 August 2018	Clarified the level of detail and purpose of date-of-birth (DOB) information collected for the subjects enrolled in the study.
06 November 2019	Adjusted the sample sizes of the study populations.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated because of long-term difficulties in fulfilling the enrolment commitments and changes in paediatric MS landscape which no longer support placebo-controlled trials. Decision to stop study was not based on safety concerns.

Notes:
