

Clinical trial results:

A Randomized, Double-Blind, Placebo-Controlled Study of Galcanezumab in Adults with Treatment-Resistant Migraine - The CONQUER Study

Summary

EudraCT number	2018-000600-42
Trial protocol	FR DE ES CZ BE NL HU DK GB
Global end of trial date	19 September 2019

Results information

Result version number	v1 (current)
This version publication date	05 July 2020
First version publication date	05 July 2020

Trial information

Trial identification

Sponsor protocol code	I5Q-MC-CGAW

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 September 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 September 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to assess the safety and efficacy of galcanezumab in people with treatment-resistant episodic or chronic migraine.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 July 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 56
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	United States: 90
Country: Number of subjects enrolled	Belgium: 27
Country: Number of subjects enrolled	Canada: 11
Country: Number of subjects enrolled	Czech Republic: 109
Country: Number of subjects enrolled	France: 30
Country: Number of subjects enrolled	Germany: 26
Country: Number of subjects enrolled	Hungary: 16
Country: Number of subjects enrolled	Japan: 42
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 28
Country: Number of subjects enrolled	Netherlands: 20
Worldwide total number of subjects	462
EEA total number of subjects	291

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	433
From 65 to 84 years	29
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Total 463 participants were randomized and 462 participants received at least one dose of study drug. one participant was screen failure.

Pre-assignment

Screening details:

NA

Period 1

Period 1 title	Double Blind Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received matching placebo every month for three months by subcutaneous (SC) injection.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received matching placebo every month for three months by SC injection.

Arm title	Galcanezumab 120mg
------------------	--------------------

Arm description:

Participants received initial loading dose of 240 milligrams (mg) of galcanezumab followed by 120mg galcanezumab every month for two months by SC injection.

Arm type	Experimental
Investigational medicinal product name	Galcanezumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received initial loading dose of 240 milligrams (mg) of Galcanezumab followed by 120mg Galcanezumab every month for two months by SC injection.

Number of subjects in period 1	Placebo	Galcanezumab 120mg
Started	230	232
Completed	226	225
Not completed	4	7
Consent withdrawn by subject	2	1
Adverse event, non-fatal	-	1
Lack of efficacy	1	1
Protocol deviation	1	4

Period 2

Period 2 title	Open-label Treatment Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Galcanezumab 120mg

Arm description:

Participants received initial loading dose of 240mg galcanezumab followed by 120mg every month for two months during open label treatment phase.

Arm type	Experimental
Investigational medicinal product name	Galcanezumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received initial loading dose of 240mg Galcanezumab followed by 120mg every month for two months during open label treatment phase by subcutaneous injection.

Arm title	Galcanezumab 120mg
------------------	--------------------

Arm description:

Participants received 120mg of galcanezumab every month for three months by subcutaneous injection.

Arm type	Experimental
Investigational medicinal product name	Galcanezumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 120mg of Galcanezumab every month for three months during open label treatment period by subcutaneous injection.

Number of subjects in period 2^[1]	Galcanzumab 120mg	Galcanzumab 120mg
Started	225	224
Completed	215	217
Not completed	10	7
Consent withdrawn by subject	3	-
Physician decision	-	1
Adverse event, non-fatal	1	4
Lost to follow-up	1	-
Lack of efficacy	3	2
Protocol deviation	2	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: One participant in placebo group who completed double blind period has withdrawn from the study.

One participant in Galcanzumab group who completed double blind period had discontinued due to AE.

Secondary: Mean Change from Baseline in the Role Function-Restrictive Domain Score of the Migraine-Specific Quality of Life Questionnaire Version 2.1 (MSQ v2.1)

End point title	Mean Change from Baseline in the Role Function-Restrictive Domain Score of the Migraine-Specific Quality of Life Questionnaire Version 2.1 (MSQ v2.1)
-----------------	---

End point description:

MSQ v2.1 is a health status instrument, with a 4-week recall period, developed to address physical and emotional limitations of specific concern to individuals with migraine. Addressing the impact of migraine on work or daily activities, relationships with family & friends, leisure time, productivity, concentration, energy, tiredness & feelings. It consists of 14 items that address 3 domains: (1) Role Function-Restrictive (items 1-7); (2) Role Function- Preventive (items 8-11); & (3) Emotional Function (items 12-14). Response options range from "none of the time" (value 1) to "all of the time" (value 6), & are reverse-recoded (value 6 to 1) before the domain scores are calculated. Total raw scores for each domain is the sum of the final item value for all of the items in that domain. After the total raw score is computed for each domain, they are transformed to a 0-100 scale with higher scores indicating a better health status & a positive change in scores reflecting functional improvement.

Secondary: Overall Mean Change from Baseline in the Number of Monthly Headache Days

End point title	Overall Mean Change from Baseline in the Number of Monthly Headache Days
-----------------	--

End point description:

Headache Day: A calendar day on which any type of headache occurred (including migraine, probable migraine, and non-migraine headache).

Overall mean is derived from the average of months 1 to 3 from MMRM model. Least square (LS) Mean was calculated using MMRM model with treatment, pooled country, month, treatment by month, baseline, and baseline by month as fixed effects.

APD: All randomized participants who received at least one dose of study drug and had baseline and at least one post baseline value.

Secondary: Mean Change from Baseline in the Migraine Disability Assessment Test (MIDAS) Total Score

End point title	Mean Change from Baseline in the Migraine Disability Assessment Test (MIDAS) Total Score
-----------------	--

End point description:

The MIDAS is a participant-rated scale which was designed to quantify headache-related disability over a 3-month period. This instrument consists of five items that reflect the number of days reported as missed or with reduced productivity at work or home, and the number of days of missed social events. Each item has a numeric response range from 0 to 90 days, if days are missed from work or home they are not counted as days with reduced productivity at work or home. The numeric responses are summed to produce a total score ranging from 0 to 270, in which a higher value is indicative of more disability. LS mean was calculated using analysis of covariance (ANCOVA) with last observation carried forward (LOCF), with baseline, pooled country, baseline migraine frequency category, and treatment as fixed effects.

APD: All randomized participants who received at least one dose of study drug and had a post baseline value at Month 3.

Secondary: Mean Change from Baseline in the 4-item Migraine Interictal Burden Scale (MIBS-4)

End point title	Mean Change from Baseline in the 4-item Migraine Interictal Burden Scale (MIBS-4)
-----------------	---

End point description:

MIBS-4 is a self-administered scale that measures the burden related to headache in the time between attacks. The instrument consists of 4 items that address disruption at work and school, diminished family and social life, difficulty planning, and emotional difficulty. The questionnaire specifically asks about the effect of the disease over the past 4 weeks on days without a headache attack. Response options include: don't know/not applicable (0), never (0), rarely (1), some of the time (2), much of the time (3), or most or all of the time (3). Each responses associated numerical score are summed across all 4 items resulting in a total score ranging from 0 to 12, and the level of interictal burden being categorized into the following: 0 for none, 1-2 mild, 3-4 moderate, and >5 severe. LS mean was calculated using MMRM model with fixed effects of treatment, pooled country, baseline migraine frequency category, month, treatment by month as fixed effects.

Secondary: Mean Change from Baseline in the Work Productivity and Activity Impairment Questionnaire (WPAI)

End point title	Mean Change from Baseline in the Work Productivity and Activity Impairment Questionnaire (WPAI)
-----------------	---

End point description:

The WPAI Questionnaire is a patient-reported instrument developed to measure the impact on work productivity and regular activities attributable to a specific health problem (migraine). Recall period is the past 7 days. It contains 6 items that measure: 1) employment status, 2) hours missed from work due to the specific health problem, 3) hours missed from work for other reasons, 4) hours actually worked, 5) degree health affected productivity while working, and 6) degree health affected productivity in regular unpaid activities. Four scores are calculated from the responses to these 6 items: absenteeism, presenteeism, work productivity loss, and activity impairment. Scores are calculated as impairment percentages (0-100%), with higher numbers indicating greater impairment and less productivity, i.e, worse outcomes. LS mean was calculated using ANCOVA with LOCF with baseline, pooled country, baseline migraine frequency category, and treatment as fixed effects.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Month 3

APD: All randomized participants who received at least one dose of study drug and had a post baseline value at Month 3.

End point title	Mean Change from Baseline in the European Quality of Life Questionnaire 5 Dimensions 5 Levels (EQ-5D-5L) - Health State Index (US)
-----------------	--

End point description:

EQ-5D-5L is a 2-part questionnaire that assesses general health status for 'today'. The first part is comprised of the following 5 participant-reported dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. Each dimension has 5 levels: no problems, slight problems, moderate problems, severe problems, and extreme problems. The responses are used to derive the health state index scores using country-specific algorithms, with scores ranging from less than 0 (where zero is a health state equivalent to death; negative values are valued as worse than dead) to 1 (perfect health). Index values were calculated using the US algorithm (-0.109 to 1). A higher score indicates better health state. LS mean was calculated using ANCOVA with LOCF with baseline, pooled country, baseline migraine frequency category, and treatment as fixed effects.
