End point title	Percentage of participants with a favorable biomarker profile (pFBP)
-----------------	--

End point description:

Biomarker parameters included: 1) number of tumor infiltrating T cells (TIL), 2) activation level of TIL, and 3) changes in immune response gene expression signatures. For the number of TILs, an increase in tumoral CD8+ cell numbers compared to baseline was considered favorable. The activation level of TIL was assessed by the percentage of tumoral CD8+ cells expressing GzmB (a marker for cytotoxic activity) or Ki67 (a marker for cell proliferation), where an increase in either GZMB+/CD8+ or KI67+/CD8+ post-baseline was considered favorable. Changes in immune response gene expression signatures were evaluated by the levels in T-cell inflamed signature (TIS), where an increase from baseline was considered favorable.

To be categorized as having a pFBP, a subject must meet the favorable criteria for at least two of the three biomarker parameters. The percentage of participants with pFBP was assessed.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 July 2018	Amendment 1 was required to implement specific feedback received from the US FDA, the Medicines and Healthcare products Regulatory Agency, the German Paul Ehrlich Institute, and the French health authority (Agence Nationale de Sécurité du Médicament) upon review of the protocol, as well as additional changes. Major changes included: Updating and clarifying inclusion and exclusion criteria; Addition of 2 additional criteria for continuation of study treatment beyond disease progression per RECIST v1.1; Provide additional and modify existing dose modification guidelines; Update the study procedure schedule; Implement a Safety DMC during expansion phase of the study
06 February 2019	Amendment 2 was required to implement feedback from the French HA (Agence Nationale de Sécurité du Médicament) after their review of protocol amendment 1. This amendment implemented precautionary on-treatment monitoring measures to optimize the detection of possible autoimmune myocarditis events in Arm 1 combining PDR001 and LAG525. Guidelines for the management of myocarditis events (of any grade) were revised.
29 April 2019	Amendment 3 was required in order to add a new combination arm for evaluation in this study (Arm 4: LEE011 in combination with PDR001).
24 January 2020	The main purpose of amendment 4 was to amend LEE011's dose modification guidelines for ILD/pneumonitis and TEN, following the observation of rare cases of ILD/pneumonitis in subjects receiving CDK4/6 inhibitors, and the reporting of TEN in the post-marketing setting in a well-documented literature case report (no case observed in the clinical trials).
26 June 2020	The main purpose of amendment 5 was to add a new non-randomized single-arm (Arm 1A) in this study to evaluate the efficacy and safety of PDR001 and LAG525 combination in LAG-3 positive subjects with previously treated unresectable or metastatic melanoma.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 9999 as data points in this record are not an accurate representation of the clinical trial results.
