Clinical trial results:
A Randomized, Double-blind, Placebo-controlled, Single Dose Phase IIb Exploratory Study to Document the Clinical Effects and Safety of Intra-articular Injections of Lopain (MTX-071) in Patients With Chronic Osteoarthritic Knee Joint Pain (Part 1 and Part 3) With Exploratory Pharmacokinetics (Part 3) and of Higher Doses or Consecutive Administrations With Local Anesthetics With Exploratory Pharmacokinetics (Part 2)

Summary

EudraCT number	2018-000818-37
Trial protocol	AT SK HR
Global end of trial date	26 January 2023

Results information

Result version number	v1 (current)
This version publication date	11 February 2024
First version publication date	11 February 2024

Trial information

Trial identification

Sponsor protocol code	MTX-071-P03

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 March 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	26 January 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Part 1, 2: To compare the pain reduction effects (absolute and relative) at 3 months and 6 months of intra articular (IA) injections of different dose levels of MTX-071 (Lopain) relative to placebo in subjects with chronic osteoarthritic knee joint pain
Part 3: To compare the pain reduction effects (absolute and relative) at 3 months and 6 months of IA injections of different dose levels of MTX-071 (Lopain) relative to placebo in a narrowed subjects population having insufficient pain relief and being unsatisfied with optimized Standard of Care (including corticosteroids, hyaluronic acid, NSAIDs, opioids, non-pharmacological treatment).

Protection of trial subjects:

The trial was conducted according to Good Clinical Practice guidelines, the ethical principles that have their origins in the Declaration of Helsinki, and the applicable local laws and regulations. The regulatory authority approved the trial as required by national regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Slovakia: 54
Country: Number of subjects enrolled	Croatia: 14
Country: Number of subjects enrolled	Austria: 93
Worldwide total number of subjects	161
EEA total number of subjects	161

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	96
From 65 to 84 years	65
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 7 sites in 3 countries between 23 October 2018 and 26 Jan 2023.

Pre-assignment

Screening details:

The study was conducted in 3 parts: Part 1, Part 2 and Part 3. A total of 161 subjects were enrolled and treated in the study.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1 - MTX-071 Group 1

Arm description:

Subjects received a single 5 millilitres (mL) IA injection of MTX-071 within 15 minute of pre-treatment with ropivacaine on Day 0 in Part 1.

Arm type	Experimental
Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 1 - MTX-071 Group 2

Arm description:

Subjects received a single 5 mL IA injection of MTX-071 within 15 more minute of pre-treatment with ropivacaine on Day 0 in Part 1.

Arm type	Experimental
Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 1 - Placebo

Arm description:

Subjects received single IA injection of placebo matched to MTX-071 within 15 minute of pre-treatment with ropivacaine on Day 0 in Part 1.

Arm type	Placebo

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received IA injection of placebo matched to MTX-071 to the knee.

Arm title	Part 2 - MTX-071 Group 1

Arm description:

Subjects received a single 5 mL IA injection of MTX-071 within 1 minute of pre-treatment with ropivacaine on Day 0 in Part 2. "Consecutive" treatment required IA injection of investigational medicinal product within 1 minute after IA injection of ropivacaine.

Arm type	Experimental
Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 2 - MTX-071 Group 2

Arm description:

Subjects received a single 5 mL IA injection of MTX-071 within 15 minute of pre-treatment with ropivacaine on Day 0 in Part 2.

Arm type	Experimental
Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 2 - MTX-071 Group 3

Arm description:

Subjects received a single 5 mL IA injection of MTX-071 within 1 minute of pre-treatment with ropivacaine on Day 0 in Part 2. "Consecutive" treatment required IA injection of investigational medicinal product within 1 minute after IA injection of ropivacaine.

Arm type	Experimental
Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 2 - MTX-071 Group 4

Arm description:

Subjects received a single 5 mL IA injection of MTX-071 within 15 minute of pre-treatment with ropivacaine on Day 0 in Part 2.

Arm type	Experimental

Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 2 - Placebo

Arm description:

Subjects received single IA injection of placebo matched to MTX-071 within 15 minute of pre-treatment with ropivacaine on Day 0 in Part 2.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received IA injection of placebo matched to MTX-071 to the knee.

Arm title	Part 3 - MTX-071 Group 1

Arm description:

Subjects received a single 5 mL IA injection of MTX-071 within 1 minute of pre-treatment with ropivacaine on Day 0 in Part 3.

Arm type	Experimental
Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 3 - MTX-071 Group 2

Arm description:

Subjects received a single 5 mL IA injection of MTX-071 within 1 minute of pre-treatment with ropivacaine on Day 0 in Part 3.

Arm type	Experimental
Investigational medicinal product name	MTX-071
Investigational medicinal product code	RTX-GRT7039
Other name	Lopain
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received 5 mL MTX-071 IA injection to the knee.

Arm title	Part 3 - Placebo

Arm description:

Subjects received single IA injection of placebo matched to MTX-071 within 1 minute of pre-treatment with ropivacaine on Day 0 in Part 3.

Arm type	Experimental

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Subjects received IA injection of placebo matched to MTX-071 to the knee.

Primary: Absolute Reduction From Baseline in the Visual Analog Scale (VAS) Scores for Pain on Motion in the Target Knee Joint at Months 3 and 6

End point title	Absolute Reduction From Baseline in the Visual Analog Scale (VAS) Scores for Pain on Motion in the Target Knee Joint at Months 3 and 6[1]

End point description:

Subjects were asked to document the severity of pain on motion and for pain on rest on individual VAS. The subject was asked to mark a position on two 100 millimetre (mm) (where 0 = no pain and 100 = maximum pain) horizontal lines that correspond to the intensity of the pain of the treated knee as an average of the last two days, respectively at rest and on motion. The absolute reduction of the VAS for pain on motion as average of the last two days will be evaluated as the absolute change, defined as: VAS score at post-baseline visit - VAS score at baseline visit. Analysis was performed on intent to treat (ITT) population which included all randomized subject who received study drug and had at least one efficacy assessment at Baseline and post-baseline. Here, 'n' = subjects with available data for each specified category.

End point type	Primary

End point timeframe:

Baseline, Months 3 and 6

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: As the endpoint was descriptive in nature, no statistical analysis was reported.

End point description:

Subjects were asked to document the severity of pain on motion and for pain on rest on individual VAS. The subject was asked to mark a position on two 100 mm (where 0 = no pain and 100 = maximum pain) horizontal lines that correspond to the intensity of the pain of the treated knee as an average of the last two days, respectively at rest and on motion. Percentage of subjects with >= 50% and >= 70% reduction from Baseline in VAS scores for pain on motion at Months 3 and 6 are reported in this endpoint. Analysis was performed on ITT population. Here, 'n' = subjects with available data for each specified category.

Secondary: Percent Change From Baseline in Western Ontario and McMaster Universities Osteoarthritis Index (WOMAC) Total Scores at Months 3 and 6: Part 1 and 2

End point title	Percent Change From Baseline in Western Ontario and McMaster Universities Osteoarthritis Index (WOMAC) Total Scores at Months 3 and 6: Part 1 and 2[3]

End point description:

WOMAC is used to assess pain, stiffness, and physical function in subjects with hip and/or knee osteoarthritis (OA). It consists of 24 items divided into 3 subscales: Pain (5 items): during walking, using stairs, in bed, sitting or lying, and standing; Stiffness (2 items): after first waking and later in the day; Physical Function (17 items): stair use, rising from sitting, standing, bending, walking, getting in/out of a car, shopping, putting on / taking off socks, rising from bed, lying in bed, getting in/out of bath, sitting, getting on / off toilet, heavy household duties, light household duties. Each item was scored on a 5-point Likert scale ranging 0 to 4 and the scores are summed for items in each subscale, with possible ranges as follows: pain score=0-20, stiffness score=0-8, physical function score=0-68.

Higher scores on the WOMAC indicate worse pain, stiffness, and functional limitations. ITT population. Here, 'n' = subjects with available data for each specified category.

Secondary: Change From Baseline in Patient Specific Functional Scale (PSFS) Total Score at Months 3 and 6

End point title	Change From Baseline in Patient Specific Functional Scale (PSFS) Total Score at Months 3 and 6[6]

End point description:

PSFS is a three-item instrument, administered verbally, that is used to evaluate whether a health condition impacts a subject's ability to perform activities that are important to him/her. On the initial assessment, the subject is asked to identify "up to three important activities that you are unable to do or are having difficulty with as a result of your OA." Subject then provides a rating for each item, on an 11-point ordinal scale ranging from 0 ("unable to perform activity") to 10 ("able to perform activity at the same level as before the injury or problem"). During reassessments, the subject is prompted to re-rate the same three activities. The average of up to 3 specific activity scores was recorded, and the range of possible scores is 0 - 10. Total score = sum of activity scores/number of activities. Higher scores indicate less impairment. Analysis was performed on ITT population. Data for this endpoint was planned to be collected and reported for Part 3 only. Here, n = subjec

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and Treatment Emergent Serious Adverse Events (TESAEs)

End point description:

An Adverse Event (AE) was any untoward medical occurrence in a subject administered a

pharmaceutical product and which did not necessarily had to have causal relationship with treatment. TEAEs were defined as AEs that occurred or worsened in severity between the first dose of the IMP until the end of follow up. A SAE was any untoward medical occurrence that at any dose: resulted in death, was life-threatening, required inpatient hospitalisation or prolongation of existing hospitalisation, resulted in persistent or significant disability/incapacity, was a congenital anomaly/birth defect, was a medically important event. Analysis was performed on all treated population.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 November 2018	Following changes were made: • The trial was extended to trial sites in Croatia; In some parts of the protocol, the IMP was called "MTX-071", which could have been interpreted as relating only to verum. To clarify, "MTX-071" was replaced by "MTX-071/placebo"; The time window for administration of IMP, which was already described in the information for the pharmacist, was added to the protocol; The determination of postmenopausal women was initially defined as "no menses for at least 24 months"; however, a follicle-stimulating hormone test was planned and mentioned in Section 8.3.10.7: laboratory assessments. The definition "postmenopausal as confirmed by follicle-stimulating hormone level" was added: contraceptive measures; Investigational medicinal product transport from the pharmacy to the trial sites was accepted in a ready-made syringe instead of the glass vial. This change was made upon advice from the participating pharmacists and investigators; A clarification was added to the randomisation numbers table indicating that it was just illustrating the principle and did not show the actual randomization numbers.
04 February 2019	Following changes were made: The trial was extended to trial sites in Austria and Croatia; A blinded interim analysis was planned with the first 3 subjects of each trial site (in total 9 subjects). As the number of trial sites had increased, the definition of the subjects to be analysed was changed to first 3 subjects of 3 trial sites; The time window for administration of premedication was aligned in different sections in the protocol.
12 July 2019	Following changes were done: The trial was extended to include administration of higher doses of RTX-GRT7039 (that had already been used in a Phase I trial) and a consecutive injection with a local anesthetic; The number of subjects to be included in Part 2 of the trial was added together with the planned treatment groups; An unblinded interim analysis (with no hold) of the efficacy (VAS) data of Part 1 was included to evaluate the evolution of the trial. The interim analysis was to take place after all subjects completed the 3-month VAS assessment; An option was added to perform the follow-up remotely.
19 December 2019	Following change was done: Voluntary blood sampling for pharmacokinetics at several timepoints on the day of injection was added for up to 7 subjects in Part 2.
13 April 2021	Following changes were done: The trial was extended with Part 3, to include an additional 60 subjects who were to receive RTX-GRT7039 or placebo consecutively with a local anesthetic; Two additional questionnaires (PGIC and PSFS) were added to investigate the effect of treatment on knee joint pain, compared to placebo; Subjects included in Part 3 of the trial were given the opportunity to receive a second injection with RTX-GRT7039 in case of recurring knee pain 6 months or 9 months after the first injection; The documentation of knee pain in the subject diary was changed to a weekly basis instead of a monthly basis; The documentation of knee pain at the trial site was updated to include the pain in the contra-lateral knee for at least 3 visits.
31 August 2021	Following changes were made: Voluntary blood sampling for pharmacokinetics at several timepoints on the day of injection was added for a minimum of 9 subjects in Part 3; The additional exploratory objectives and endpoints were updated to reflect the collection and analysis of blood samples for pharmacokinetics in Part 3.

30 March 2022	Following changes were made: The sponsor was changed from Mestex AG, Klosterberg 11, CH-4051 Basel, Switzerland to Grünenthal GmbH, 52099 Aachen, Germany; effective as of 01 Apr 2022. Associated changes to the author and key trial personnel were made; The IMP packaging and labeling information presented in the protocol were updated; The safety reporting procedure was adapted as Grünenthal Global Drug Safety prepared to takeover reporting to the competent authorities (safety reporting takeover took place on 28 Apr 2022) while the Safety Unit at QPS performed reporting to the ethics committee and investigators; The description of IMP handling in the protocol was updated with subsequent section renumbering.
18 August 2022	Following changes were made: The coordinating investigator was changed, and the respective details were updated: The medical monitor was changed, and the respective details were updated; The name and function on the sponsor signature page was changed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
