Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001501-PIP04-19
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 June 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 June 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of the study by study part are:

Part A: To determine the treatment effect of dupilumab compared with placebo in adult and adolescent patients with EoE after 24 weeks of treatment as assessed by histological and clinical measures and to inform/confirm the final sample size determination for Part B. (Participants enrolled in Part A may not participate in Part B)

Part B: To demonstrate the efficacy of dupilumab treatment compared with placebo in adult and adolescent patients with EoE after 24 weeks of treatment as assessed by histological and clinical measures.

Part C: To assess the safety and efficacy of dupilumab treatment in adult and adolescent patients with EoE after up to 52 weeks of treatment as assessed by histological and clinical measures.

Protection of trial subjects:

It is the responsibility of both the sponsor and the investigators to ensure that this clinical study will be conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki, and that are consistent with the International Council for Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 September 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Sweden: 1
Country: Number of subjects enrolled	United States: 272
Worldwide total number of subjects	321
EEA total number of subjects	28

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	99
Adults (18-64 years)	220
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Part A (24-week double-blind treatment period [DBTP]): 157 participants screened, 81 randomized and received at least 1 dose of study drug; Part B (24-week DBTP): 462 participants screened, 240 randomized, 239 received treatment (1 participant randomized to placebo did not meet eligibility criteria and was discontinued prior to being treated).

Period 1

Period 1 title	Double-blind, placebo-controlled
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A: Placebo

Arm description:

Participants received placebo matching dupilumab subcutaneously (SC) during Part A (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part A entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matching dupilumab

Arm title	Part A: Dupilumab 300 mg QW
------------------	-----------------------------

Arm description:

Participants received dupilumab 300 milligrams (mg) SC once per week (QW) during Part A (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part A entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Arm type	Experimental
Investigational medicinal product name	dupilumab
Investigational medicinal product code	REGN668
Other name	DUPIXENT
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dupilumab 300 mg delivered subcutaneously (SC) once weekly (QW)

Arm title	Part B: Placebo
------------------	-----------------

Arm description:

Participants received placebo matching dupilumab SC during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matching dupilumab

Arm title	Part B: Dupilumab 300 mg Q2W
------------------	------------------------------

Arm description:

Participants received dupilumab 300 mg once every 2 weeks (Q2W) SC during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Arm type	Experimental
Investigational medicinal product name	dupilumab
Investigational medicinal product code	REGN668
Other name	DUPIXENT
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dupilumab 300 mg delivered subcutaneously (SC) once every 2 weeks (Q2W); a SC injection of placebo was delivered in between dupilumab doses to maintain injection frequency between groups.

Arm title	Part B: Dupilumab 300 mg QW
------------------	-----------------------------

Arm description:

Participants received dupilumab 300 mg SC once per week (QW) during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Arm type	Experimental
Investigational medicinal product name	dupilumab
Investigational medicinal product code	REGN668
Other name	DUPIXENT
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dupilumab 300 mg delivered subcutaneously (SC) once weekly (QW)

Period 2

Period 2 title	Extended active treatment & follow-up
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Blinding implementation details:

Only participants entering Part C from Part B were blinded to treatment regimen in Part C.

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A/C: Placebo / Dupilumab 300 mg QW

Arm description:

Participants randomized to placebo in Part A, received dupilumab 300 mg QW for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.

Arm type	Experimental
Investigational medicinal product name	dupilumab
Investigational medicinal product code	REGN668
Other name	DUPIXENT
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dupilumab 300 mg delivered subcutaneously (SC) once weekly (QW)

Arm title	Part A/C: Dupilumab 300 mg QW / Dupilumab 300 mg QW
Arm description: Participants randomized to dupilumab 300 mg QW in Part A continued to receive the same regimen for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.	
Arm type	Experimental
Investigational medicinal product name	dupilumab
Investigational medicinal product code	REGN668
Other name	DUPIXENT
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details: Dupilumab 300 mg delivered subcutaneously (SC) once weekly (QW)	
Arm title	Part B/C: Placebo / Dupilumab 300 mg Q2W
Arm description: Participants randomized to placebo in Part B were re-randomized in a 1:1 ratio to receive dupilumab 300 mg Q2W for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.	
Arm type	Experimental
Investigational medicinal product name	dupilumab
Investigational medicinal product code	REGN668
Other name	DUPIXENT
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details: Dupilumab 300 mg delivered subcutaneously (SC) once every 2 weeks (Q2W); a SC injection of placebo was delivered in between dupilumab doses to maintain injection frequency between groups.	
Arm title	Part B/C: Placebo / Dupilumab 300 mg QW
Arm description: Participants randomized to placebo in Part B were re-randomized in a 1:1 ratio to receive dupilumab 300 mg QW for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: One participant's week 24 visit in Part A was delayed due to COVID-19; afterwards, participant moved to Part C

Baseline characteristics

Reporting groups

Reporting group title	Part A: Placebo
Reporting group description:	
Participants received placebo matching dupilumab subcutaneously (SC) during Part A (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part A entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.	
Reporting group title	Part A: Dupilumab 300 mg QW
Reporting group description:	
Participants received dupilumab 300 milligrams (mg) SC once per week (QW) during Part A (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part A entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.	
Reporting group title	Part B: Placebo
Reporting group description:	
Participants received placebo matching dupilumab SC during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.	
Reporting group title	Part B: Dupilumab 300 mg Q2W
Reporting group description:	
Participants received dupilumab 300 mg once every 2 weeks (Q2W) SC during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.	
Reporting group title	Part B: Dupilumab 300 mg QW
Reporting group description:	
Participants received dupilumab 300 mg SC once per week (QW) during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Dysphagia Symptom Questionnaire (DSQ) Total Score			
The DSQ is used to measure the frequency and intensity of dysphagia. DSQ scores can range from 0 to 84, with a lower score indicating less-frequent or less-severe dysphagia.			
Units: Score on a Scale			
arithmetic mean	35.1	32.2	36.1
standard deviation	± 12.11	± 12.66	± 10.55
Peak Eosinophils (eos) Count of Three Regions per High-power Field (/hpf)			
Units: Eosinophils/high-power field (eos/hpf)			
arithmetic mean	96.5	82.6	84.3
standard deviation	± 54.69	± 41.02	± 41.20
Eosinophilic Esophagitis (EoE) Histological Grade Calculated Mean Score (0 - 3)			
Severity (grade) and extent (stage) of esophageal abnormalities were scored by blinded, central pathologists using a 4-point scale (0 normal; 3 maximum change) for eight features: eosinophil density, basal zone hyperplasia, eosinophil abscesses, eosinophil surface layering, dilated intercellular spaces, surface epithelial alteration, dyskeratotic epithelial cells and lamina propria fibrosis (absent/present). Higher score indicates greater severity and extent of histological abnormalities.			
Units: Score on a Scale			
arithmetic mean	1.324	1.260	1.226
standard deviation	± 0.4676	± 0.4088	± 0.3996
Eosinophilic Esophagitis (EoE) Histological Stage Calculated Mean Score (0 - 3)

End point title	Normalized Enrichment Score (NES) for the relative change from baseline in EoE Diagnostic Panel (EDP) at week 24
-----------------	------------------------------------------------------------------------------------------------------------------

End point description:

NES reflects the degree to which the activity level of a set of disease transcripts is overrepresented at the extremes (top or bottom) of the entire ranked list of transcripts within a sample and is normalized by accounting for the number of transcripts in the set. A NES of 0 indicates no change from baseline, a negative score reflects a reduction in the disease score (more like normal) and a positive score reflects worsening (more active disease). Part A FAS (Participants with NES Score in Part A; Last observation carried forward [LOCF] method with data set to missing after rescue treatment use); Part B FAS (Participants with NES Score in Part B; LOCF method with data set to missing after rescue treatment use)

Secondary: Absolute change from baseline in health-related quality of life (QOL) average score as measured by EoE Impact Questionnaire (EoE-IQ) at week 24

End point title	Absolute change from baseline in health-related quality of life (QOL) average score as measured by EoE Impact Questionnaire (EoE-IQ) at week 24
-----------------	-------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

The EoE-IQ measures impact of EoE on emotional, social, work & school, & sleep aspects. Participants were asked to respond to 11 questions based on experience living with EoE during past 7 days. Response to each item is on a 5-point scale (1=Not at all [impacted] 2=A little, 3=Somewhat, 4=Quite a bit, 5=Extremely [impacted]). The average score is the sum of non-missing responses divided by the number of items with non-missing responses. The average score can range from 1 to 5; a higher score is indicative of a more negative impact. Secondary: Absolute change from baseline in Severity of EoE symptoms other than dysphagia as measured by EoE Symptom Questionnaire (EoE-SQ) at week 24

End point title	Absolute change from baseline in Severity of EoE symptoms other than dysphagia as measured by EoE Symptom Questionnaire (EoE-SQ) at week 24
-----------------	---------------------------------------------------------------------------------------------------------------------------------------------

End point description:

The EoE-SQ asks about symptoms that participants with EoE may have (chest pain, stomach pain, burning feeling in chest, food or liquid coming back up into throat, throwing up) during the past 7 days. Response to the severity of each symptom based on the worst experience in the past 7 days is on a scale of 0 to 10 (higher is worse). The EoE-SQ severity score is calculated as the sum of the severity scores from questions 1 to 3 (chest pain, stomach pain, burning feeling in chest), which could range from 0 to 30; a higher score is indicative of more severe symptoms. Secondary: Incidence of treatment-emergent anti-drug antibody (ADA) response

End point title	Incidence of treatment-emergent anti-drug antibody (ADA) response
-----------------	-------------------------------------------------------------------

End point description:

Number of treatment-emergent ADA responses to dupilumab reported. The ADA analysis set (AAS) for Part A and Part C included all participants who received any study drug and had at least one non-missing ADA result from the dupilumab ADA assay after first dose of the study drug in the corresponding study part (participants analyzed according to treatment actually received). The AAS for Part B and Part C included all participants who received any study drug and had at least one non-missing ADA result from the dupilumab ADA assay after first dose of the study drug in the corresponding study part (participants analyzed according to treatment actually received)..

Reporting groups

Reporting group title	Part A: Placebo
-----------------------	-----------------

Reporting group description:

Participants received placebo matching dupilumab SC during Part A (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part A entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Reporting group title	Part B: Placebo
-----------------------	-----------------

Reporting group description:

Participants received placebo matching dupilumab SC during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Reporting group title	Part B: Dupilumab 300 mg Q2W
-----------------------	------------------------------

Reporting group description:

Participants received dupilumab 300 mg Q2W SC during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Reporting group title	Part A: Dupilumab 300 mg QW
-----------------------	-----------------------------

Reporting group description:

Participants received dupilumab 300 mg SC QW during Part A (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part A entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Reporting group title	Part B: Dupilumab 300 mg QW
-----------------------	-----------------------------

Reporting group description:

Participants received dupilumab 300 mg SC QW during Part B (24-week DBTP). At end of week 24 visit (one-week after last dose of study drug during DBTP), eligible participants from Part B entered into 28-week extended treatment (Part C) and 12-week follow-up. Participants who did not enter into Part C, entered follow-up period.

Reporting group title	Part C: Dupilumab 300 mg Q2W (placebo in Part B)
-----------------------	--------------------------------------------------

Reporting group description:

Participants randomized to placebo in Part B were re-randomized in a 1:1 ratio to receive dupilumab 300 mg Q2W for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.

Reporting group title	Part C: Dupilumab 300 mg QW (placebo in Part A or B)
-----------------------	------------------------------------------------------

Reporting group description:

Participants randomized to placebo in Part A, received dupilumab 300 mg QW for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up. Participants randomized to placebo in Part B were re-randomized in a 1:1 ratio to receive dupilumab 300 mg Q2W for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.

Reporting group title	Part C: Dupilumab 300 mg Q2W (Part B regimen continued)
-----------------------	---------------------------------------------------------

Reporting group description:

Participants randomized to dupilumab 300 mg Q2W in Part B continued to receive the same regimen for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.

Reporting group title	Part C: Dupilumab 300 mg QW (Part A or B regimen continued)
-----------------------	-------------------------------------------------------------

Reporting group description:

Participants randomized to dupilumab 300 mg QW in Part A continued to receive the same regimen for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up. Participants randomized to dupilumab 300 mg QW during Part B, continued to receive the same regimen for 28-week extended treatment (Part C) followed by 12-week follow-up. Participants who did not enter into Part C, entered follow-up.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 October 2018	Added an exclusion criterion: known systemic hypersensitivity to dupilumab or the excipients of the drug product; Exclusion Criterion # 26: replaced serum creatinine threshold with estimated glomerular filtration rate (eGFR); Exclusion Criterion #27: replaced the example for severe renal conditions of "patients on dialysis" with "severe nephrotic syndrome"; Exclusion Criterion #33: Added clarification that the reliability of sexual abstinence needs to be evaluated in relation to the duration of the clinical trial and the preferred and usual lifestyle of the patient based on Clinical Trial Facilitation Group guideline on contraception; Clarified criteria for resumption of treatment after study drug has been temporarily discontinued because of a severe laboratory abnormality.
18 April 2019	Per Health Authority request, changed Part C from open-label to a design with added placebo SC injections alternating with dupilumab 300 mg Q2W doses in order to mask the dosing regimen for Part B patients during this extended active treatment phase of the study; Added a per protocol set to the defined efficacy analysis sets to assess the overall robustness of the analysis results. Added that any re-estimation of sample size for Part B will be documented in the Part B SAP before its database lock. If the re-estimated sample size requires an increase of the planned sample size in Part B by more than 86 total patients (25%), it will also be documented in a protocol amendment so as to inform Has, ECs, and investigators; Added a substudy which may be performed at select sites and a secondary endpoint to the study for the endolumenal functional lumen imaging probe (EndoFLIP) procedure to measure esophageal distensibility during the esophagogastroscope procedures at selected sites in approximately 150 adult patients; Added additional secondary endpoints for proportion of patients who receive rescue medications or procedures during the 24-week placebo-controlled treatment period and absolute change in EoE Stage Score from the EoEHSS from baseline to week 24.
10 March 2020	The purpose of this amendment was to add transcriptome sequencing for analyzing RNA expression of eosinophilic esophagitis (EoE) and type 2 inflammation to the study secondary objectives and endpoints, and to add the European Quality of Life 5-dimension 3-level (EQ-5D3L) Questionnaire to collect general health status of EoE patients. Additionally, the Eosinophilic Esophagitis-Endoscopic Reference Score (EoE-EREFS) procedure for Part B patients was revised to allow for centralized reading and scoring. Other minor changes were made to align with regulatory authority feedback and for general clarification.
16 April 2020	The purpose of this protocol amendment was to protect patient safety and data integrity during the COVID-19 pandemic by allowing for certain study procedures to occur at delayed time points and/or outside of the clinic environment. All temporary mechanisms utilized, and deviations from planned study procedures are to be documented as being related to COVID-19 and will remain in effect only for the duration of the public health emergency.
05 November 2020	The purpose of this protocol amendment was to adjust the sample size for Part B based on the results of Part A of the study, and to add an additional database lock after all patients in Part A complete study week 52 of Part C. Other changes were made for clarification and consistency

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
27 March 2020	Enrollment was halted due to operational challenges associated with measures in place to limit the spread of the COVID-19 pandemic.	01 June 2020

Notes:

Limitations and caveats
