

Clinical trial results:

A Phase 3, Randomized, Double-Blind Study to Evaluate the Safety and Efficacy of Fixed Dose Combination of Bictegravir/Emtricitabine/Tenofovir Alafenamide versus Dolutegravir + Emtricitabine/Tenofovir Disoproxil Fumarate in Treatment Naïve, HIV-1 and Hepatitis B Co-Infected Adults

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 March 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 February 2022
Global end of trial reached?	Yes
Global end of trial date	07 March 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the efficacy of fixed-dose combination (FDC) of bicitgravir/emtricitabine/ tenofovir alafenamide (B/F/TAF) versus dolutegravir (DTG) + emtricitabine/tenofovir disoproxil fumarate (F/TDF) in treatment-naïve and HIV-1 and hepatitis B virus (HBV) adults.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 May 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Dominican Republic: 10
Country: Number of subjects enrolled	Malaysia: 37
Country: Number of subjects enrolled	United States: 3
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	Türkiye: 9
Country: Number of subjects enrolled	Hong Kong: 5
Country: Number of subjects enrolled	Puerto Rico: 1
Country: Number of subjects enrolled	Taiwan: 12
Country: Number of subjects enrolled	China: 56
Country: Number of subjects enrolled	Japan: 8
Country: Number of subjects enrolled	Korea, Republic of: 2
Country: Number of subjects enrolled	Thailand: 94
Worldwide total number of subjects	244
EEA total number of subjects	7

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	242
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in the North American, Asian and European regions.

Pre-assignment

Screening details:

381 participants were screened.

Period 1

Period 1 title	Blinded Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Blinded Phase: B/F/TAF

Arm description:

Participants who were HIV-1 and HBV co-infected and treatment-naïve received bicitegravir/emtricitabine/tenofovir alafenamide (B/F/TAF) (50/200/25 mg) fixed-dose combination (FDC) tablet orally, once daily without regard to food for 96 weeks. Participants also received placebo to match (PTM) dolutegravir (DTG) tablet and PTM emtricitabine/ tenofovir desoproxil fumarate (F/TDF) tablet orally once daily without regard to food for 96 weeks.

Arm type	Experimental
Investigational medicinal product name	B/F/TAF
Investigational medicinal product code	
Other name	Biktarvy®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

50/200/25 mg fixed-dose combination (FDC) tablet administered once daily, without regard to food.

Investigational medicinal product name	Placebo to Match F/TDF
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily, without regard to food.

Investigational medicinal product name	Placebo to Match DTG
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily, without regard to food.

Arm title	Blinded Phase: DTG + F/TDF
------------------	----------------------------

Arm description:

Participants who were HIV-1 and HBV co-infected and treatment-naïve received DTG (50 mg) tablet + F/TDF (200/300 mg) FDC tablet, orally, once daily without regard to food for 96 weeks. Participants also received PTM B/F/TAF tablet, orally, once daily without regard to food for 96 weeks.

Arm type	Experimental
Investigational medicinal product name	DTG
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily, without regard to food.

Investigational medicinal product name	Placebo to Match F/TDF
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily, without regard to food.

Investigational medicinal product name	F/TDF
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily, without regard to food.

Number of subjects in period 1^[1]	Blinded Phase: B/F/TAF	Blinded Phase: DTG + F/TDF
Started	121	122
Completed	111	113
Not completed	10	9
Withdrew Consent	2	3
Adverse Event	1	-
Death	2	-
Investigator's Discretion	2	1
Non-Compliance With Study Drug	-	2
Lost to follow-up	3	3

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One participant was randomized to B/f/TAF group but was not treated.

Period 2

Period 2 title	Open-label Extension Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Open-Label Extension Phase: B/F/TAF from B/F/TAF
Arm description:	
After Week 96, participants continued their blinded study drug and attended visits every 12 weeks until the End of Blinded Treatment Visit. Following the End of Blinded Treatment Visit, if safety and efficacy of B/F/TAF FDC was demonstrated for the HIV-1 and HBV coinfecting participants, in a country where B/F/TAF FDC was not available, participants were given the option to receive 48-weeks of open-label B/F/TAF until the product became accessible through an access program, or until Gilead elected to discontinue the study in that country, whichever occurred first.	
Arm type	Experimental
Investigational medicinal product name	B/F/TAF
Investigational medicinal product code	
Other name	Biktarvy®
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

50/200/25 mg B/F/TAF FDC tablet administered once daily, without regard to food.

Arm title	Open-Label Extension Phase: B/F/TAF from DTG+F/TDF
Arm description:	
After Week 96, participants continued their blinded study drug and attended visits every 12 weeks until the End of Blinded Treatment Visit. Following the End of Blinded Treatment Visit, if safety and efficacy of B/F/TAF FDC was demonstrated for the HIV-1 and HBV coinfecting participants, in a country where B/F/TAF FDC was not available, participants were given the option to receive 48-weeks of open-label B/F/TAF until the product became accessible through an access program, or until Gilead elected to discontinue the study in that country, whichever occurred first.	
Arm type	Experimental
Investigational medicinal product name	B/F/TAF
Investigational medicinal product code	
Other name	Biktarvy®
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

50/200/25 mg B/F/TAF FDC tablet administered once daily, without regard to food.

Number of subjects in period 2^[2]	Open-Label Extension Phase: B/F/TAF from B/F/TAF	Open-Label Extension Phase: B/F/TAF from DTG+F/TDF
Started	95	89
Completed	91	88
Not completed	4	1
Death	1	-
Lost to follow-up	3	1

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Out of 111 (B/F/TAF) and 113 (DTG + F/TDF) participants who completed the Blinded Phase, 95 participants from B/F/TAF and 89 participants from DTG + F/TDF entered the Open-label Extension Phase.

Statistical analyses

Statistical analysis title	Plasma Hepatitis B Virus (HBV) DNA < 29 IU/mL
----------------------------	---

Statistical analysis description:

A sample size of 240 participants provided 81% power to detect a non-inferiority margin of 12% between the 2 treatment groups. This assumed that both treatment groups have a response rate of 88% (based on Gilead Studies GS-US-320-0108 and GS-US-320-0110), that the non-inferiority margin is 12%, and that the significance level of the test is at a one-sided 0.025 level.

Comparison groups	Blinded Phase: DTG + F/TDF v Blinded Phase: B/F/TAF
Number of subjects included in analysis	241
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	Difference in Percentages
Point estimate	16.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	5.9
upper limit	27.3

Notes:

[1] - The difference in percentages of participants with HBV DNA < 29 IU/mL between treatment groups and its 95.001% CI were calculated based on the MH proportions adjusted by baseline HBeAg status (positive vs negative) and baseline HBV DNA category (< 8 log10 IU/mL vs ≥ 8 log10 IU/mL).

Statistical analysis title	Plasma Hepatitis B Virus (HBV) DNA < 29 IU/mL
Comparison groups	Blinded Phase: DTG + F/TDF v Blinded Phase: B/F/TAF
Number of subjects included in analysis	241
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0023 ^[2]
Method	Cochran-Mantel-Haenszel

Notes:

[2] - The p-value was from CMH test stratified by baseline HBeAg status (positive vs negative) and HBV DNA category (< 8 log10 IU/mL vs ≥ 8 log10 IU/mL).

Primary: Percentage of Participants With HIV-1 RNA < 50 Copies/mL at Week 48 as Defined by the US FDA-Defined Snapshot Algorithm (Co-primary Endpoint)

End point title	Percentage of Participants With HIV-1 RNA < 50 Copies/mL at Week 48 as Defined by the US FDA-Defined Snapshot Algorithm (Co-primary Endpoint)
-----------------	---

End point description:

The percentage of participants achieving HIV-1 RNA < 50 copies/mL at Week 48 was analyzed using the snapshot algorithm, which defines a participant's virologic response status using only the viral load at the predefined time point within an allowed window of time, along with study drug discontinuation status. Percentages were rounded off.

The Full Analysis Set included all participants who were randomized into the study, received at least 1 dose of study drug, and had at least 1 postbaseline HIV-1 RNA or HBV DNA result while on study drug.

End point type	Primary
End point timeframe:	
Week 48

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events: Up to the last dose date plus 30 days (maximum exposure: 5.1 years); All-Cause Mortality: Up to 5.3 years

Adverse event reporting additional description:

All-Cause Mortality: All Randomized Analysis Set included all participants who were randomized into the study.

Adverse Events: The Safety Analysis Set included participants who were randomized into the study and received at least 1 dose of study drug.

Reporting groups

Reporting group title	Blinded B/F/TAF
-----------------------	-----------------

Reporting group description:

Participants who were HIV-1 and HBV coinfecting treatment-naïve received Bictegravir/emtricitabine/tenofovir alafenamide (B/F/TAF) (50/200/25 mg) fixed-dose combination (FDC) tablet orally, once daily without regard to food for 96 weeks. Participants received placebo to match (PTM) dolutegravir (DTG) tablet and PTM emtricitabine/ tenofovir desoproxil fumarate (F/TDF) tablet orally once daily without regard to food for 96 weeks.

Reporting group title	OL B/F/TAF from DTG + F/TDF
-----------------------	-----------------------------

Reporting group description:

After Week 96, participants continued their blinded study drug and attended visits every 12 weeks until the End of Blinded Treatment Visit. Following the End of Blinded Treatment Visit, if safety and efficacy of B/F/TAF FDC was demonstrated for the HIV-1 and HBV coinfecting participants, in a country where B/F/TAF FDC was not available, participants were given the option to receive open-label B/F/TAF until the product became accessible through an access program, or until Gilead elected to discontinue the study in that country, whichever occurred first.

Reporting group title	OL B/F/TAF from B/F/TAF
-----------------------	-------------------------

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 April 2018	<p>Herein is a summary of the major changes made to the original protocol dated 02 March 2018 and reflected in Amendment 1 dated 10 April 2018</p> <ul style="list-style-type: none">- Revised to include updates from ongoing bictegravir studies- Updated to include additional information in Risk/Benefit Assessment section- Update made to Biomarker Testing and Urine Samples testing- Revised to provide clarification to Management of HIV-1 Virologic Rebound- Revised to provide clarification to HBV Resistance Surveillance section <p>Specific changes contained in Amendment 1 are presented herein. New text is indicated by bold/italics.</p> <p>Study synopsis, glossary, Appendix 2 Study Procedures Table and all applicable sections are updated to align with above mentioned changes in the protocol.</p> <p>In addition, the opportunity is taken to correct the administrative, typographical or grammatical errors.</p>
06 July 2018	<p>Herein is a summary of the major changes made to Protocol Amendment 1 dated 10 April 2018 and reflected in Protocol Amendment 2 dated 06 July 2018.</p> <p>In response to FDA's Drug Safety Communication issued on May 18, 2018 for a serious finding of neural tube defect (NTD) changes have been made to the protocol sections outlined below.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
