Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 August 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 November 2020
Global end of trial reached?	Yes
Global end of trial date	25 November 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the trial was to evaluate the efficacy of KPL-301 versus placebo, coadministered with a 26-week steroid taper, for maintaining sustained remission for 26 weeks in subjects with new-onset or relapsing/refractory giant cell arteritis (GCA).

Secondary objectives of the trial were:

- To evaluate the effect of KPL-301 vs placebo on cumulative corticosteroid dose.
- To evaluate the effect of KPL-301 vs placebo on health-related quality of life (HRQoL).
- To evaluate the safety and tolerability of KPL-301.
- To evaluate the pharmacokinetics (PK) of KPL-301.

Protection of trial subjects:

This study was conducted in accordance with the protocol and with the consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines, and applicable International Council for/Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines, and applicable country and local laws and regulations. Subjects were informed that their participation was voluntary. Subjects or their legally authorized representative were required to sign a statement of informed consent that met the requirements of 21 Code of Federal Regulations 50, local regulations, ICH guidelines, Health Insurance Portability and Accountability Act requirements, where applicable, and the IRB/IEC or study center.

Background therapy:

All subjects received an unblinded 26-week oral prednisone taper according to a standardized tapering protocol. The oral steroid taper was self-administered by study subjects on a daily basis.

Evidence for comparator: -

Actual start date of recruitment	20 September 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	18
From 65 to 84 years	51
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Subjects who met all of the inclusion criteria and none of the exclusion criteria were enrolled into the study. Eligible subjects entered the double-blind treatment period after randomization 3:2 to blinded treatment with KPL-301 150 mg or placebo administered subcutaneously (SC) every other week (every 2 weeks).

Pre-assignment

Screening details:

The study consisted of a screening period up to 6 weeks. Potential subjects were screened for meeting study-specified diagnostic criteria for GCA. Prior to first administration of KPL-301 or placebo, all subjects were required to have achieved remission.

Period 1

Period 1 title	Base Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

This was a double-blind study in which KPL-301 and placebo were identical in appearance/viscosity. Neither the subject nor any of the investigator or sponsor staff who were involved in the treatment or clinical evaluation of the subjects were aware of the treatment received.

Arms

Are arms mutually exclusive?	Yes
Arm title	KPL-301 150mg

Arm description:

Treatment with KPL-301 150 mg administered subcutaneously (SC) every other week (every 2 weeks). KPL-301 was coadministered with a 26-week corticosteroid taper.

Arm type	Experimental
Investigational medicinal product name	KPL-301
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects randomized to KPL-301 received 150 mg every other week by SC injection coadministered with a 26-week steroid taper.

Arm title	Placebo
------------------	---------

Arm description:

Treatment with placebo administered subcutaneously (SC) every other week (every 2 weeks). Placebo was coadministered with a 26-week corticosteroid taper.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects randomized to Placebo received sterile, clear, colorless, free from visible particles liquid product identical in appearance/viscosity to the KPL-301 every other week by SC injection coadministered with a 26-week steroid taper.

Number of subjects in period 1	KPL-301 150mg	Placebo

End point type	Primary
End point timeframe: By Week 26	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics were included for this primary endpoint. Kaplan-Meier method used to estimate the survival functions for each treatment arm.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Placebo hasn't been included in this endpoint as there is no data for Time to Flare - Hazard Ratio.
