## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 January 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the efficacy of treatment with BMS-986213 (fixed-dose combination [FDC] relatlimab/nivolumab) plus investigator's choice chemotherapy compared with nivolumab in combination with investigator's choice chemotherapy in participants with previously untreated, unresectable, and either locally advanced or metastatic gastric cancer (GC) or GEJ adenocarcinoma in the LAG-3 positive population.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

End point title	Number of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	--

End point description:

Number of participants with any grade adverse events (AEs), serious adverse events (SAE), and adverse events leading to discontinuation using National Cancer Institute (NCI) Common Terminology Criteria for Adverse Events (CTCAE v 5.0). An AE is defined as any new untoward medical occurrence or worsening of a preexisting medical condition in a clinical investigation participant administered study treatment and that does not necessarily have a causal relationship with this treatment. SAE is defined as any untoward medical occurrence that, at any dose results in death, is life threatening, requires inpatient hospitalization, results in significant disability, is a birth defect, or is an important medical event.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Participants were assessed for all-cause mortality from their first dose to their study completion (up to approximately 63 months). SAEs and Other AEs were assessed from first dose up to 100 days post last dose (Up to approximately 63 months).

Adverse event reporting additional description:

The number at Risk for All-Cause Mortality represents all Randomized Participants. The number at Risk for Serious Adverse Events and Other (Not Including Serious) Adverse Events represents all participants that received at least 1 dose of study medication.

Assessment type	Systematic
