Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 May 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 September 2022
Global end of trial reached?	Yes
Global end of trial date	27 September 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the acute and long-term safety of oral GABA treatment.

Protection of trial subjects:

In the first dose-escalation part of the study, 6 patients were treated with 200 mg, 600 mg and 1200 mg GABA. The IDMC reviewed the safety data for the first patient before allowing the following five patients to begin the dose-escalation steps. After all patients had completed the dose-escalation study, the IDMC again reviewed the data to ensure safe continuation of the main study where patients were randomized to one of three treatment arms receiving a daily dose of 200 mg GABA, 600 mg GABA or 600 mg GABA + 0.5 mg alprazolam. Safety parameters, plasma concentration of GABA, insulin and glucose tolerance was evaluated for each patient.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 October 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 35
Worldwide total number of subjects	35
EEA total number of subjects	35

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Male patients with type 1 diabetes at Uppsala University Hospital, Sweden, diagnosed ≥ 5 years at the time of screening were given information about the study and asked to participate in the trial.

Pre-assignment

Screening details:

A total of 49 patients were screened for inclusion in the Main study, of which 12 were excluded due to a screen failure and 2 because of other reasons (difficult to find appropriate blood vessels and not possible to participate due to work).

Period 1

Period 1 title	Before treatment with GABA
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The study was an open label trial, so no blinding or code breaking procedures were needed.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	200 mg GABA
------------------	-------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Remygen (GABA)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg, once daily taken together with food

Arm title	600 mg GABA
------------------	-------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Remygen (GABA)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg, once daily taken together with food

Arm title	600 mg GABA + 0.5 mg alprazolam
------------------	---------------------------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Remygen (GABA)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg, once daily taken together with food

Investigational medicinal product name	Alprazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

0.5 mg, once daily, taken together with food.

Number of subjects in period 1	200 mg GABA	600 mg GABA	600 mg GABA + 0.5 mg alprazolam
Started	13	11	11
Completed	13	11	9
Not completed	0	0	2
Consent withdrawn by subject	-	-	2

Period 2

Period 2 title	Treatment with GABA
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The study was an open label trial, so no blinding or code breaking procedures were needed.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 May 2019	<ul style="list-style-type: none">- Addition of the exclusion criteria:<ul style="list-style-type: none">1. Females of child-bearing potential7. Increased plasma concentrations of alanine aminotransferase ($>0.75 \mu\text{kat/l}$ for females or $>1.1 \mu\text{kat/l}$ for males) and/or aspartate aminotransferase ($>0.60 \mu\text{kat/l}$ for females or $>0.75 \mu\text{kat/l}$ for males).18. Participation in other clinical trials with a new chemical entity within 3 months or 5 half-lives of the new chemical entity, whatever longest.- Addition of further information regarding GABA sampling- The trial is no longer labeled "first in human"- Addition of a third arm to the main study that would receive a high dose of GABA (600 mg) in combination with 0.5 mg Alprazolam for 3 months.- Addition of 12 patients to the main study population
24 August 2020	<ul style="list-style-type: none">- Addition of genotyping for HLA.- Liver function will be tested in 1- to 2-week intervals after start of study treatment- A hypoglycemic clamp will be performed twice after the 6-month treatment period

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
