

Clinical trial results:

A 52-week, placebo-controlled, randomized, Phase 3 study to evaluate the safety and efficacy of seladelpar in subjects with primary biliary cholangitis (PBC) and an inadequate response to or intolerance to ursodeoxycholic acid (UDCA).

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 May 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 February 2020
Global end of trial reached?	Yes
Global end of trial date	16 February 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Evaluate the safety and effect on cholestasis of two seladelpar regimens (5 mg/day titrated to 10 mg/day and 10 mg/day) over 52 weeks of treatment compared to placebo.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and its revisions and the International Conference on Harmonisation (ICH) Harmonized Tripartite Guideline for Good Clinical Practice (GCP). The study was also in compliance with the applicable local regulatory requirements and laws of each country in which the study was conducted, as well as with any applicable guidelines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 September 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	221
From 65 to 84 years	44
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 159 clinical sites in the Asia Pacific, Europe, Latin America, and North America regions between 01 October 2018 and 16 February 2020.

Pre-assignment

Screening details:

A total of 501 subjects were screened, and 265 subjects were randomized into the study. All 265 subjects received at least 1 randomized dose: 87 subjects received placebo, 89 subjects received seladelpar 5 mg, and 89 subjects received seladelpar 10 mg at Day 1.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Seladelpar 5 mg (initial Dose)

Arm description:

Subjects received seladelpar 5 milligram (mg) capsules orally once daily for the study duration

Arm type	Experimental
Investigational medicinal product name	Seladelpar
Investigational medicinal product code	MBX-8025
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received seladelpar 5 milligram (mg) capsules orally once daily for the treatment period

Arm title	Seladelpar 10 mg (initial dose)
------------------	---------------------------------

Arm description:

Subjects received seladelpar 10 mg capsules orally once daily for the study duration

Arm type	Experimental
Investigational medicinal product name	Seladelpar
Investigational medicinal product code	MBX-8025
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received seladelpar 10 milligram (mg) capsules orally once daily for the treatment period

Arm title	Placebo
------------------	---------

Arm description:

Subjects received matched placebo capsules orally once daily for the study duration

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received matching placebo capsules orally once daily for the study duration

Number of subjects in period 1	Seladelpar 5 mg (initial Dose)	Seladelpar 10 mg (initial dose)	Placebo
Started	89	89	87
Completed	1	1	0
Not completed	88	88	87
Consent withdrawn by subject	2	-	-
Other - early termination by sponsor	84	86	86
Adverse event, non-fatal	-	2	-
Lost to follow-up	1	-	1
Other than listed	1	-	-

Secondary: Change From Baseline in Pruritus as Assessed by Numerical Rating Scale (NRS) for Subjects with Baseline NRS ≥4

End point title	Change From Baseline in Pruritus as Assessed by Numerical Rating Scale (NRS) for Subjects with Baseline NRS ≥4
-----------------	--

End point description:

Pruritus NRS at Month 3 is the key secondary efficacy endpoint. The weekly pruritus score was calculated by recording the daily pruritus score each day for seven days and later taking the mean value of the seven days' daily recorded data. If any data was available for a given week, the available NRS results was used for the calculation of the weekly mean. If no NRS results was available in a given week, the mean of the prior week was used to impute those missing results using the LOCF method. Only assessments before or within 2 days after the last dose was used in determining weekly means. Baseline pruritus NRS is defined as the mean of the all daily recorded scores during run-in. n, denotes number of subjects evaluable for the respective timepoints

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 August 2018	Protocol amendment (version 1.1) for sites outside of US <ul style="list-style-type: none">•Clarified that an abdominal ultrasound was to be performed, and liver elastography was to be performed at selected sites.•Added the requirement that subjects perform a urine pregnancy test monthly (every 30±3 days) through the duration of treatment.•Clarified that platelet counts were to be measured by local laboratories, if deemed necessary by the investigator.•Cystatin C was added as an analyte.
29 November 2018	Protocol amendment (version 1.1ES) for Spain <ul style="list-style-type: none">•Clarified that the subject population included only those subjects with an inadequate response to UDCA; subjects with UDCA intolerance were excluded.•Clarified that the assessment of TEAEs was based on CTCAE Version 5.0.
18 January 2019	Protocol amendment (version 1.1RU) for Russia <ul style="list-style-type: none">•Changes were made to the protocol to address comments received by the Ministry of Health of the Russian Federation: An update on the CB8025-21629 study was provided, efficacy and safety data were updated with a July 2018 cut-off.•Clarified that Version 5.0 rather than Version 4.0 of the CTCAE was to be used for this study.•Included the window for obtaining the pre-dose liver elastography which could have been performed from the Run-in Visit (Week -2) to study drug dosing at Day 1.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
25 November 2019	On 25 November 2019, as a precautionary measure until the NASH study (CB8025-21730) histology findings could be understood, Study CB8025-31735 was put on hold and subjects stopped treatment with study drug. At that time, the study was fully enrolled and subjects had a broad range of study drug treatment durations. Based on the receipt of information requests from the United States Food and Drug Administration (FDA) for the Phase 2 NASH study and the PBC studies, it was concluded that it would not be reasonable to maintain the PBC studies on hold given the time it would take to resolve the FDA requests. On 20 December 2019 the sites were informed of the ENHANCE study termination and requested to perform necessary safety evaluations on all active subjects.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As a result of early termination of study while the study was still blinded the primary endpoint and key secondary endpoints were revised to be assessed at Month 3 instead of Month 12 based on the number of subjects who reached 3 months of treatment.

Notes:
