End point title	Percentage of Subjects Achieving Psoriasis Area and Severity Index $\geq 75\%$ (PASI 75) Improvement
End point description: Number of subjects is shown for each reporting group in lieu of percentage. Following 12 weeks of treatment. The Psoriasis Area and Severity Index (PASI) scores the severity of disease on a scale from 0 to 72 (where a score of 72 indicates extreme disease severity). PASI 75 indicates 75% improvement from baseline to Week 12 in the Psoriasis Area and Severity Index. Intent to treat population included all randomized subjects with moderate to severe chronic plaque psoriasis who took at least 1 dose of double-blind study treatment and at least the Week 1 post-baseline PASI assessment.
