Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 December 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 December 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of the study are as follows:

- To assess the effect of TD-1473 compared to placebo in improving Crohn's Disease Activity Index (CDAI) score at Week 12 in subjects with moderately-to-severely active CD
- To assess the safety and tolerability of TD-1473

Protection of trial subjects:

This trial was conducted in accordance with the ethical principles of Good Clinical Practice, according to the International Council for Harmonisation (ICH) Harmonised Tripartite Guideline.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 July 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Worldwide total number of subjects	159
EEA total number of subjects	67

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	152
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 167 participants were randomized, of which 159 participants were eligible for analysis at sites in Australia, Asia/Pacific, Israel, Russia, the United States and South Africa between 19 November 2018 and 30 December 2021.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants were randomized to receive once-daily oral administrations of placebo for 12 weeks during the Induction Period. Participants who completed the Induction Period received once-daily oral administrations of TD-1473 80 mg in the Active Treatment Extension period for up to 48 additional weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Received orally.

Arm title	TD-1473 80 mg
------------------	---------------

Arm description:

Participants were randomized to receive once-daily oral administrations of TD-1473 80 mg for 12 weeks during the Induction Period. Participants who completed the Induction Period received once-daily oral administrations of TD-1473 80 mg in the Active Treatment Extension period for up to 48 additional weeks.

Arm type	Experimental
Investigational medicinal product name	TD-1473
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Received orally.

Arm title	TD-1473 200 mg
------------------	----------------

Arm description:

Participants were randomized to receive once-daily oral administrations of TD-1473 200 mg for 12 weeks during the Induction Period. Participants who completed the Induction Period received once-daily oral administrations of TD-1473 200 mg in the Active Treatment Extension period for up to 48 additional weeks.

Arm type	Experimental
Investigational medicinal product name	TD-1473
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Received orally.

Primary: Change From Baseline in Crohn's Disease Activity Index (CDAI) Score

End point title	Change From Baseline in Crohn's Disease Activity Index (CDAI) Score
End point description: The CDAI score was generated using regression coefficients for 8 predictors of disease activity: severity of abdominal pain, general well-being, very soft/liquid stool frequency, extra-intestinal symptoms, need for antidiarrheal drugs, presence of an abdominal mass, body weight & hematocrit. The subscores of abdominal pain (0-3), general well-being (0-4), & number of very soft or liquid stools were then summed over the 7 days prior to each visit. The remaining predictors were also noted & weighted to create the total CDAI score. Benchmarks for disease activity were: <150, clinical remission; 150 to 219, mildly active disease; 220-450, moderately active disease; >450, very severe disease. Modified Intent-to-Treat Analysis Set: Comprised all randomized evaluable participants who received at least 1 dose of study drug and had at least one postbaseline CDAI score. Only participants with non-missing values at both baseline and postbaseline visit were included.

Secondary: Number of Participants Who Demonstrated a Clinical Response as Measured by CDAI

End point title	Number of Participants Who Demonstrated a Clinical Response as Measured by CDAI
-----------------	---

End point description:

The CDAI score was generated using regression coefficients for 8 predictors of disease activity: severity of abdominal pain, general well-being, very soft/liquid stool frequency, extra-intestinal symptoms, need for antidiarrheal drugs, presence of an abdominal mass, body weight & hematocrit. The subscores of abdominal pain (0-3), general well-being (0-4), & number of very soft or liquid stools were then summed over the 7 days prior to each visit. The remaining predictors were also noted & weighted to

create the total CDAI score.

Benchmarks for disease activity were: <150, clinical remission; 150 to 219, mildly active disease; 220-450, moderately active disease; >450, very severe disease.

Clinical response was defined as a reduction from baseline of ≥ 100 points or CDAI <150.

The analysis set used was the Modified Intent-to-Treat Analysis Set.

Secondary: Change From Baseline in Simple Endoscopic Score for Crohn's Disease (SES-CD) at Week 12

End point title	Change From Baseline in Simple Endoscopic Score for Crohn's Disease (SES-CD) at Week 12
-----------------	---

End point description:

The SES-CD incorporated 4 descriptors: the ulcer size, the proportion of surface covered by ulcer, the proportion of surface covered by other lesions, and the presence of stenosis. Each descriptor was graded from 0-3 and was scored in 5 segments (ileum, right colon, transverse colon, left colon, and rectum). The total score was calculated as the sum of all the items in each segment and ranged from 0 to 56, with higher scores indicating a worse outcome.

The analysis set used was the Modified Intent-to-Treat Analysis Set including only participants who had non-missing values at both baseline and postbaseline visit.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 April 2018	Amendment 1 included the following changes: <ul style="list-style-type: none">- Theravance Biopharma Ireland Limited telephone number was removed- Stratification factors were updated- Minor adjustment in the targeted proportion of biologics-naïve participants- Treatment regimen updated- Inclusion and exclusion criteria updated- Fecal lactoferrin added to the fecal testing- Statistical analysis section updated- Schedule of study procedures updated- Fistula Drainage Assessment was added for applicable participants- Risk and Benefits section updated- Treatment failure definition added- Rationale for study design updated- Rationale for dose assignment updated- Treatment compliance definition updated- Medical history data collection updated- Biopsy location information added- Participant diaries updated- Prohibited and permitted medications sections updated- Adverse event of special interest (AESI) definition updated- References and appendices updated.
13 July 2018	Amendment 2 included updates to the following sections: Cover Page and Protocol Synopsis; Background and Rationale; Risks and Benefits; Inclusion and Exclusion Criteria; Schedule of Study Procedures; Screening Stage 1; Fecal Sampling; Ileocolonoscopy and Biopsies; Prohibited Medications; Subject Discontinuation; AESI; serious adverse event (SAE) and AESI reporting timeline; Clinical Laboratory Abnormalities and Other Abnormal Assessments as Adverse Events or SAEs; Major Analysis Protocol Deviations; and Appendices.
28 June 2019	Amendment 3 included updates to the following sections: Protocol Synopsis; Background and Rationale; Clinical Experience; Selection of Dose and Duration of Treatment; Study Design Overview; Study Population; Overview; Procedures by Visit; Inclusion and Exclusion Criteria; Schedule of Study Procedures; Coexisting Medical Conditions or Past Medical History; Concomitant Medications; Statistical Methods; Sample Size and Power; Study Procedures; Objectives; Study Endpoints; Blinding; Treatment Assignment; Females of Childbearing Potential and Acceptable Birth Control; Screening Stage 2; Medication History; Vital Signs; Physical Examination; Viral Hepatitis and Human Immunodeficiency Virus Serology Panel; Tuberculosis (TB) Test; Ileocolonoscopy and Biopsies; Fecal Samples; Subject Daily Diary; Permitted Medications; Subject Discontinuation; Informed Consent; Confidentiality; Access to Data and Documents; SAE; Clinical Laboratory Abnormalities and Other Abnormal Assessments as Adverse Events or SAEs; and Appendices.
09 June 2020	Amendment 4 included updates to the following sections: Protocol Synopsis; Clinical Experience; Inclusion and Exclusion Criteria; Schedule of Study Procedures; TB Test; Permitted Medications; Subject Replacement; Pregnancy; AESI; Clinical Laboratory Abnormalities and Other Abnormal Assessments as Adverse Events or SAEs; Clinical Events Committee; Electrocardiogram Data; References; and Appendices.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated by the sponsor on 16 November 2021 after a planned review by the Independent Data Monitoring Committee.
