

Clinical trial results:

A Phase 2, Multicenter, Open-label Study to Assess Safety and Preliminary Activity of Eribulin Mesylate in Pediatric Subjects With Relapsed/Refractory Rhabdomyosarcoma (RMS), Non-rhabdomyosarcoma Soft Tissue Sarcoma (NRSTS) and Ewing Sarcoma (EWS)

Summary

EudraCT number	2018-001282-17
Trial protocol	Outside EU/EEA

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001261-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 January 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 January 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study will be conducted as an assessment of the safety and preliminary activity of eribulin mesylate in pediatric subjects with relapsed/refractory RMS, NRSTS, or EWS to determine whether each cohort warrants further investigation.

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following: - Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008) - International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use - European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country, and Title 21 of the United States Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and IRB regulations and applicable sections of US 21 CFR Part 312. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 April 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 21
Worldwide total number of subjects	21
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	8
Adolescents (12-17 years)	13
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 38 investigative sites in the United States from 17 April 2018 to 21 January 2022.

Pre-assignment

Screening details:

A total of 24 subjects were screened, of which 1 was screen failure and 23 subjects were enrolled, out of which 21 subjects were enrolled and treated in the study and 2 were not treated due to withdrawal of consent and rapid disease progression (1 subject from each arm).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Eribulin mesylate 1.4 mg/m ² : RMS

Arm description:

Pediatric subjects with RMS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 milligrams per meter square (mg/m²). Subjects continued to receive study therapy until progression of disease, per Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Eribulin mesylate
Investigational medicinal product code	E7389
Other name	Eribulin Halaven
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eribulin mesylate administered as an intravenous (IV) infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m².

Arm title	Eribulin mesylate 1.4 mg/m ² : NRSTS
------------------	---

Arm description:

Pediatric subjects with NRSTS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m². Subjects continued to receive study therapy until progression of disease, (per RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Eribulin mesylate
Investigational medicinal product code	E7389
Other name	Eribulin Halaven
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eribulin mesylate administered as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m².

Arm title	Eribulin mesylate 1.4 mg/m ² : EWS
------------------	---

Arm description:

Pediatric subjects with EWS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day

cycle at a dose of 1.4 mg/m². Subjects continued to receive study therapy until progression of disease, (per RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Eribulin mesylate
Investigational medicinal product code	E7389
Other name	Eribulin Halaven
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eribulin mesylate administered as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m².

End points

End points reporting groups

Reporting group title	Eribulin mesylate 1.4 mg/m ² : RMS
Reporting group description: Pediatric subjects with RMS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 milligrams per meter square (mg/m ²). Subjects continued to receive study therapy until progression of disease, per Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.	
Reporting group title	Eribulin mesylate 1.4 mg/m ² : NRSTS
Reporting group description: Pediatric subjects with NRSTS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m ² . Subjects continued to receive study therapy until progression of disease, (per RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.	
Reporting group title	Eribulin mesylate 1.4 mg/m ² : EWS
Reporting group description: Pediatric subjects with EWS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m ² . Subjects continued to receive study therapy until progression of disease, (per RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.	

Primary: Percentage of Subjects With Objective Response

End point title	Percentage of Subjects With Objective Response ^[1]
End point description: Percentage of subjects achieving a best objective response of partial response (PR) or complete response (CR) per RECIST 1.1, by up to 24 weeks after all subjects have completed response assessment. Response assessment was determined by investigator. CR was defined as the disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must had reduction in the short axis to less than (<) 10 millimeters (mm). PR was defined as at least a 30 percent (%) decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. The FAS included all subjects who receive at least 1 dose of study drug.	
End point type	Primary
End point timeframe: From date of randomization up to first documentation of disease progression (PD) or date of death, whichever occurred first (approximately 32 months)	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Planned analyses for these data was descriptive only.

Secondary: Progression-free Survival (PFS)

End point title	Progression-free Survival (PFS)
-----------------	---------------------------------

End point description:

PFS was defined as the time from the first dose date to the date of PD or date of death (whichever occurred first). PD was defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (this included the baseline sum if that was the smallest on study). In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm. (Note: the appearance of one or more new lesions was also considered progression). The FAS included all subjects who receive at least 1 dose of study drug. As planned, data for this secondary endpoint was collected and analyzed up to the primary completion date (PCD).

End point type	Secondary

Secondary: Number of Subjects With any Treatment-emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With any Treatment-emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	---

End point description:

An AE was any untoward medical occurrence in subject administered with an investigational product. An SAE was any untoward medical occurrence that at any dose: resulted in death; life threatening; requires subject hospitalization or prolongation of existing hospitalization; resulted in persistent or significant disability/incapacity; was a congenital anomaly/birth defect (in the child of a subject who was exposed to the study drug). A treatment-emergent adverse event (TEAE) was defined as an AE that emerges during treatment, having been absent at pretreatment (Baseline) or (1) reemerges during treatment, having been present at pretreatment (Baseline) but stopped before treatment, or (2) worsens in severity during treatment relative to the pretreatment state, when the AE is continuous. The safety analysis set (SAS) included all subjects who receive at least 1 dose of study drug.

End point type	Secondary

Notes:

[3] - No subjects with best overall response of complete response or partial response were observed here.

[4] - No subjects with best overall response of complete response or partial response were observed here.

[5] - No subjects with best overall response of complete response or partial response were observed here.

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
-----------------	-----------------------

End point description:

OS was defined as the time from the first dose date to the date of death. The FAS included all subjects who receive at least 1 dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

From the day of first dose to the day of death, up to approximately 44 months

End point values	Eribulin mesylate 1.4 mg/m ² : RMS	Eribulin mesylate 1.4 mg/m ² : NRSTS	Eribulin mesylate 1.4 mg/m ² : EWS	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	8	8	5	
Units: months				

median (confidence interval 95%)	5.08 (1.74 to 6.47)	6.95 (0.72 to 16.26)	7.89 (2.50 to 29.80)	
----------------------------------	---------------------	----------------------	----------------------	--

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From date of administration of first dose up to 28 days after the last dose, or until resolution, whichever came first (up to approximately 44 months)

Assessment type	Systematic

Reporting groups

Reporting group title	Eribulin mesylate 1.4 mg/m ² : RMS
-----------------------	---

Reporting group description:

Pediatric subjects with RMS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m². Subjects continued to receive study therapy until progression of disease, (per RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.

Reporting group title	Eribulin mesylate 1.4 mg/m ² : EWS
-----------------------	---

Reporting group description:

Pediatric subjects with EWS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m². Subjects continued to receive study therapy until progression of disease, (per RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.

Reporting group title	Eribulin mesylate 1.4 mg/m ² : NRSTS
-----------------------	---

Reporting group description:

Pediatric subjects with NRSTS received eribulin mesylate as an IV infusion on Days 1 and 8 of each 21-day cycle at a dose of 1.4 mg/m². subjects continued to receive study therapy until progression of disease, (per RECIST v.1.1), exhibited no clinical benefit, intolerable toxicity, withdrawal of consent or termination of the study program, whichever occurred first.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 July 2017	Inclusion Criterion was updated in line with the label for Halaven® regarding definition of impaired renal function. Exclusion Criterion was updated in line with the label for Halaven, regarding the concomitant use of drugs that prolong the QTc. (Eribulin mesylate, Instructions for QTc Prolongation on Electrocardiogram [ECG]) was updated in line with the Halaven label. The text regarding pregnancy testing was amended to clarify that serum beta-human chorionic gonadotropin or urine test is required within 72 hours of first dose of study drug and to align Exclusion Criterion and Schedule of Procedures/Assessments.
29 September 2017	In view of the subject population, CNS imaging was only to be required for subjects with a history of protocol-eligible brain metastasis and as clinically indicated. The text was updated for clarification purposes. Assessment grade added for NRSTS for clarification. Time of full neurological examination and assessment criteria used were modified for clarification. Instructions for prior antibody therapy were updated in line with eribulin study protocols. Clarification that for sites outside the EU, double barrier method of contraception is acceptable for those subjects that are not on a stable dose of hormonal contraception. The text was updated for clarification purposes; responses confirmed 4 weeks post initial assessment of PR/CR per RECIST v.1.1 were to be used in the analysis.
20 December 2018	Two exploratory objectives of DOR and OS were changed to secondary objectives, endpoints and analyses following feedback from the FDA and the European Medicines Agency Paediatric Committee (EMA PDCO). Inclusion Criterion was corrected. Exclusion Criterion was updated to be in line with eribulin study protocols. The screening period was extended from 14 to 28 days, following feedback from investigators, to allow more time for completion of screening procedures and to prevent unnecessary repeat scans. Following feedback from the EMA PDCO, the duration of follow-up was clarified and increased. Magnesium was added to the chemistry panel for clinical laboratory tests in line with eribulin study protocols.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
