

Clinical trial results:

A Phase 2, proof-of-concept, multicentre, double-blind, randomised, dose-ascending, sequential group, placebo-controlled study to evaluate the mechanistic effect, safety, and tolerability of 12 weeks twice daily oral administration of alvelestat (MPH966) in participants with alpha-1 antitrypsin deficiency.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 March 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 March 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the mechanistic effect of two doses of alvelestat administered twice daily (bid) for 12 weeks on blood markers of Neutrophil Elastase (NE) activity and safety in individuals with alpha-1 antitrypsin deficiency-associated emphysema.

Protection of trial subjects:

This study was conducted in accordance with the accepted version of the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines and/or all relevant federal regulations as set forth in Parts 50, 56, 312, Subpart D, of Title 21 of the United States Code of Federal Regulations (CFR), in compliance with International Council for Harmonisation (ICH) good clinical practice (GCP) guidelines, and according to the appropriate regulatory requirements in the countries where the study was conducted.

Background therapy:

Standard of Care for Chronic Obstructive Pulmonary Disease

Evidence for comparator: -

Actual start date of recruitment	03 September 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 39
Country: Number of subjects enrolled	Denmark: 23
Country: Number of subjects enrolled	Sweden: 14
Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	United States: 6
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Spain: 1
Worldwide total number of subjects	99
EEA total number of subjects	48

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	77
From 65 to 84 years	22
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were enrolled at 26 sites in the United States, Canada, Belgium, Denmark, Poland, Spain, Sweden and the United Kingdom. 1 participant was randomized to alvelestat 240 milligram (mg) but did not receive study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Alvelestat 120 mg

Arm description:

4 × 30 mg alvelestat and 4 × 30 mg placebo oral tablets taken twice daily (BID) 12 hours apart with water for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Alvelestat
Investigational medicinal product code	
Other name	MPH966
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Alvelestat tablets were administered orally

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablets were administered orally

Arm title	Alvelestat 240 mg
------------------	-------------------

Arm description:

8 × 30 mg alvelestat oral tablets BID 12 hours apart with water for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Alvelestat
Investigational medicinal product code	
Other name	MPH966
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Alvelestat tablets were administered orally

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Placebo tablets were administered orally	
Arm title	Placebo

Arm description:

8 × oral placebo tablets BID 12 hours apart with water for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablets were administered orally

Number of subjects in period 1^[1]	Alvelestat 120 mg	Alvelestat 240 mg	Placebo
Started	22	40	36
Received at least 1 dose of study drug	22	40	36
Completed	14	29	33
Not completed	8	11	3
Adverse event, non-fatal	2	11	-
Withdrew due to COVID-19 restrictions	6	-	3

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 1 participant was randomized to alvelestat 240 mg but did not receive study treatment.

Primary: Percent Change from Baseline to End of Treatment in Blood Neutrophil Elastase Activity

End point title	Percent Change from Baseline to End of Treatment in Blood Neutrophil Elastase Activity
End point description: Percent change of Blood Neutrophil Elastase (NE) Activity is reported. To fulfil the residual normality assumptions of the model for NE serum, a log transformation was applied. The log ratio defined as log (visit value or EndPoint value / baseline value) was used as the dependent variable in place of the percentage change in the MMRM model. Therefore, the back-transformed least squares mean (LSM) values were obtained by applying the formula $[\exp(\text{LSM}) - 1] \times 100\%$.

End point title	Numbers of Participants Who Experienced At Least 1 Treatment-emergent Adverse Event (TEAE)
-----------------	--

End point description:

An Adverse Event (AE) was defined as any untoward medical occurrence in a participant or clinical investigation participant administered a pharmaceutical (investigational) product and which did not necessarily have to have a causal relationship with this treatment. TEAEs were events with start dates on or after the date of the first dose of study treatment and up to 28 days after the date of the last dose of study treatment or events with start dates prior to the date of the first dose of study treatment whose severity worsened on or after the date of the first dose of study treatment. A summary of serious and all other non-serious adverse events regardless of causality is located in the Reported Adverse Events module.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 May 2018	Clarifications and corrections.
02 July 2018	Amendments to inclusion/exclusion criteria and treatment discontinuation criteria for liver function tests at request of FDA.
15 August 2018	Amendments to the exclusion criteria and description of a potential non-clinical safety risk of phototoxicity and the protective measures for participants to minimize exposure to UV radiation at the request of the FDA.
30 July 2019	Clarifications and corrections. Amendments to remove the procedures for phototoxicity and the protective measures for participants to minimize exposure to UV radiation.
05 December 2019	Introduction of within participant dose escalation to improve participant tolerability of the 240 mg bid dose. Simplifications of the protocol.
07 June 2021	Clarifications and corrections. Amendments to inclusion/exclusion criteria and Concomitant Therapy information
16 November 2021	Clarifications and corrections. Change to study design from single primary endpoint proof of concept design to multiple (3 mechanistic) primary endpoint, signal-seeking, weight of evidence design with related changes throughout.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
30 March 2022	Trial terminated early due to recruitment difficulties during COVID-19.	-

Notes:

Limitations and caveats

None reported
