Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 April 2024
Global end of trial reached?	Yes
Global end of trial date	30 April 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial was evaluate the objective response rate (ORR) according to RECIST 1.1 criteria after two cycles of treatment with pembrolizumab before conducting radiofrequency ablation (RFA), microwave ablation (MWA), or brachytherapy with or without combination of TACE to assess if this will allow conversion / downstaging of borderline candidates for local ablation.

Secondary objectives were the evaluation of time to recurrence (TTR), recurrence-free survival (RFS) and overall survival (OS), as well as safety and tolerability of peri-interventional treatment with pembrolizumab followed by RFA, MWA, or brachytherapy with or without combination of TACE .

Protection of trial subjects:

This clinical study was designed, implemented and reported in accordance with the protocol, the AMG (Arzneimittelgesetz), the ICH Harmonized Tripartite Guidelines for Good Clinical Practice, with applicable local regulations (including European Directive 2001/20/EC), and with the ethical principles laid down in the Declaration of Helsinki. The trial was authorized/approved by the competent authority (Paul-Ehrlich-Institut, PEI) and the competent ethics committee responsible for the trial ("federführende Ethikkommission"). Before recruitment into the clinical trial, each patient was informed that participation in the study is completely voluntary, and that he or she could withdraw their participation in the trial at any time without any declaration of reasons, which would not lead to any disadvantage for the respective patient. The eligibility of a new patient was determined by the local investigator during regular clinical visits. The examinations for the study and the inclusion of the patient were done after detailed written and oral education about aims, methods, anticipated benefits and potential hazards of the study by use of the informed consent forms and after given written consent of the patient. Safety was monitored continuously by careful monitoring of all adverse events (AEs) and serious adverse events (SAEs) reported.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 May 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 30
Worldwide total number of subjects	30
EEA total number of subjects	30

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	19
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

30 patients were planned to be recruited into this trial. The recruitment period was from Juli 2019 to November 2021 in 9 centers. 35 patients were screened, 30 were enrolled.

Pre-assignment

Screening details:

Eligible patients had histol. confirmed HCC diagnosis (Child Pugh A) with indication for local ablation via RFA, MWA, brachytherapy with/without TACE, incl. high-risk patients (defined as having ≤ 5 tumor nodules with diameters ≤ 7 cm [longest axis] each OR vascular infiltration), and with tumor tissue available for central pathological examination

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Experimental Arm
-----------	------------------

Arm description:

In this single arm study, all patients received pembrolizumab (200 mg, IV, Q3W on day 1 of cycle 1 and 2) followed by local ablation via RFA, MWA, brachytherapy with/without TACE performed on day 1 of cycle 3 followed by pembrolizumab (200 mg IV, administered 2 days after local ablation, then Q3W for up to 12 months total treatment duration)

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	Keytruda, L01FF02
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Infusion , Intravenous use

Dosage and administration details:

200 mg, IV, Q3W on day 1 of each cycle. Exception: at cycle 3, administered 2 days after local ablation

Number of subjects in period 1	Experimental Arm
Started	30
Completed	11
Not completed	19
Unrelated medical illness or complication	1
Physician decision	3
Consent withdrawn by subject	2
Disease progression	8
Death	2
Unacceptable toxicity	3

Primary: Objective response rate (ORR)

End point title	Objective response rate (ORR) ^[1]
-----------------	--

End point description:

ORR, defined as achieving complete response (CR) or partial response (PR) according to RECIST 1.1 criteria (measured after two cycles of treatment, but before RFA, MWA, brachytherapy or combination of TACE with RFA, MWA or brachytherapy, compared to baseline)

End point type	Primary
----------------	---------

End point timeframe:

from baseline to 6-8 weeks after first treatment

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to the explorative nature of this trial and the small number of patients only descriptive statistics was performed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Patients were closely monitored for adverse events (AEs) from date of inclusion until at least 30 days after last dose of study treatment for AEs, and for at least 110 days for serious AEs, events of clinical interest, and pembrolizumab-associated AEs

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 May 2019	Main changes of the study protocol: <ul style="list-style-type: none">• "Patients with child-pugh classification score ≤ 6, including high risk candidates for local ablation (defined as patient is having ≤ 5 tumor nodules with diameters ≤ 5cm [longest axis] each OR patient with vascular infiltration) will be included in the study"• Inclusion criterion #4: "High risk patient, i.e. presence of ≤ 5 tumor nodules with diameters ≤ 5cm [longest axis] each OR vascular infiltration" – IEC: 03 Jul 2019, PEI: 13 Jun 2019
12 February 2020	Main change: Expansion of local ablation options to include brachytherapy as well as the possibility of combining local ablation with TACE

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
