

Clinical trial results:

A Phase 3 Randomized, Double-Blind, Placebo-Controlled Trial of Pembrolizumab (MK-3475) Plus Chemotherapy Versus Chemotherapy Plus Placebo for the First-Line Treatment of Persistent, Recurrent, or Metastatic Cervical Cancer (KEYNOTE-826)

Summary

EudraCT number	2018-001440-53
Trial protocol	DE FR ES PL IT
Global end of trial date	04 June 2024

Results information

Result version number	v1 (current)
This version publication date	24 May 2025
First version publication date	24 May 2025

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 June 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 October 2022
Global end of trial reached?	Yes
Global end of trial date	04 June 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to assess the efficacy and safety of pembrolizumab (MK-3475) plus one of four platinum-based chemotherapy regimens compared to the efficacy and safety of placebo plus one of four platinum-based chemotherapy regimens in the treatment of adult women with persistent, recurrent, or metastatic cervical cancer. Possible chemotherapy regimens include: paclitaxel plus cisplatin with or without bevacizumab and paclitaxel plus carboplatin with or without bevacizumab. The primary study hypotheses are that the combination of pembrolizumab plus chemotherapy is superior to placebo plus chemotherapy with respect to: 1) Progression-free Survival (PFS) per Response Evaluation Criteria in Solid Tumors (RECIST 1.1) as assessed by the Investigator, or, 2) Overall Survival (OS).

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 October 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 40
Country: Number of subjects enrolled	Australia: 8
Country: Number of subjects enrolled	Canada: 36
Country: Number of subjects enrolled	Chile: 57
Country: Number of subjects enrolled	Colombia: 43
Country: Number of subjects enrolled	France: 36
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	Israel: 24
Country: Number of subjects enrolled	Italy: 39
Country: Number of subjects enrolled	Japan: 57
Country: Number of subjects enrolled	Korea, Republic of: 24
Country: Number of subjects enrolled	Mexico: 38
Country: Number of subjects enrolled	Peru: 41
Country: Number of subjects enrolled	Russian Federation: 40
Country: Number of subjects enrolled	Spain: 12
Country: Number of subjects enrolled	Taiwan: 16

Country: Number of subjects enrolled	Türkiye: 24
Country: Number of subjects enrolled	Ukraine: 26
Country: Number of subjects enrolled	United States: 46
Worldwide total number of subjects	617
EEA total number of subjects	97

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	517
From 65 to 84 years	100
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

883 participants were screened and 617 participants were randomized to receive either Pembrolizumab+Chemotherapy or Placebo+Chemotherapy.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Pembrolizumab+Chemotherapy

Arm description:

On Day 1 of each 21-day cycle, participants received an intravenous (IV) infusion of pembrolizumab 200 mg for up to 35 cycles (up to approximately 2 years) PLUS Investigator choice of chemotherapy for up to 6 cycles (paclitaxel 175 mg/m² PLUS cisplatin 50 mg/m² WITH or WITHOUT bevacizumab 15 mg/kg per local label OR paclitaxel 175 mg/m² PLUS carboplatin Area Under the Curve (AUC) 5 for up to 6 cycles, WITH or WITHOUT bevacizumab 15 mg/kg per local label). All treatments were administered until disease progression or toxicity. Eligible participants who stopped the initial course of pembrolizumab with Stable Disease (SD) or better but progressed after discontinuation may have been able to initiate a second course of pembrolizumab for up to 17 cycles (up to approximately 1 additional year) at the investigator's discretion.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	MK-3475 KEYTRUDA®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	TAXOL®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	AVASTIN®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	PARAPLATIN®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	PLATINOL®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Arm title	Placebo+Chemotherapy
------------------	----------------------

Arm description:

On Day 1 of each 21-day cycle, participants received an IV infusion of placebo (Normal Saline or Dextrose solution) for up to 35 cycles (up to approximately 2 years) PLUS Investigator choice of chemotherapy for up to 6 cycles (paclitaxel 175 mg/m² PLUS cisplatin 50 mg/m² WITH or WITHOUT bevacizumab 15 mg/kg per local label OR paclitaxel 175 mg/m² PLUS carboplatin AUC 5 for up to 6 cycles, WITH or WITHOUT bevacizumab 15 mg/kg per local label). All treatments were administered until disease progression or toxicity.

Arm type	Active comparator
Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	TAXOL®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	PLATINOL®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	PARAPLATIN®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	AVASTIN®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Investigational medicinal product name	Placebo to pembrolizumab
Investigational medicinal product code	
Other name	Normal Saline or Dextrose solution
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV infusion

Reporting group title	Pembrolizumab+Chemotherapy
-----------------------	----------------------------

Reporting group description:

On Day 1 of each 21-day cycle, participants received an intravenous (IV) infusion of pembrolizumab 200 mg for up to 35 cycles (up to approximately 2 years) PLUS Investigator choice of chemotherapy for up to 6 cycles (paclitaxel 175 mg/m² PLUS cisplatin 50 mg/m² WITH or WITHOUT bevacizumab 15 mg/kg per local label OR paclitaxel 175 mg/m² PLUS carboplatin Area Under the Curve (AUC) 5 for up to 6 cycles, WITH or WITHOUT bevacizumab 15 mg/kg per local label). All treatments were administered until disease progression or toxicity. Eligible participants who stopped the initial course of pembrolizumab with Stable Disease (SD) or better but progressed after discontinuation may have been able to initiate a second course of pembrolizumab for up to 17 cycles (up to approximately 1 additional year) at the investigator's discretion.

Reporting group title	Placebo+Chemotherapy
-----------------------	----------------------

Reporting group description:

On Day 1 of each 21-day cycle, participants received an IV infusion of placebo (Normal Saline or Dextrose solution) for up to 35 cycles (up to approximately 2 years) PLUS Investigator choice of chemotherapy for up to 6 cycles (paclitaxel 175 mg/m² PLUS cisplatin 50 mg/m² WITH or WITHOUT bevacizumab 15 mg/kg per local label OR paclitaxel 175 mg/m² PLUS carboplatin AUC 5 for up to 6 cycles, WITH or WITHOUT bevacizumab 15 mg/kg per local label). All treatments were administered until disease progression or toxicity.

Reporting group values	Pembrolizumab+Chemotherapy	Placebo+Chemotherapy	Total
Number of subjects	308	309	617
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	260	257	517
From 65-84 years	48	52	100
85 years and over	0	0	0
Age Continuous Units: Years			
arithmetic mean	51.7	50.7	
standard deviation	± 11.9	± 12.7	-
Sex: Female, Male Units: Participants			
Female	308	309	617
Male	0	0	0
Race (NIH/OMB) Units: Subjects			
American Indian or Alaska Native	18	21	39
Asian	65	45	110
Native Hawaiian or Other Pacific Islander	0	0	0
Black or African American	4	2	6

White	170	190	360
More than one race	32	34	66
Unknown or Not Reported	19	17	36
Ethnicity (NIH/OMB)			
Units: Subjects			
Hispanic or Latino	109	121	230
Not Hispanic or Latino	193	184	377
Unknown or Not Reported	6	4	10
Programmed Cell Death-Ligand 1 (PD-L1) Combined Positive Score (CPS) Status			
Participants were assessed for their PD-L1 tumor expression level by immunohistochemistry assay using tumor tissue. Randomization of participants in the study were stratified by their PD-L1 CPS at baseline (PD-L1 CPS<1, 1≤ PD-L1 CPS<10, or PD-L1 CPS≥10).			
Units: Subjects			
PD-L1 CPS<1	35	34	69
1≤ PD-L1 CPS<10	115	116	231
PD-L1 CPS≥10	158	159	317
Metastatic at Initial Diagnosis			
Randomization of participants was stratified by whether they were metastatic at initial diagnosis (Yes or No). Metastatic was defined as Stage IVB based on the Fédération Internationale de Gynécologie et d'Obstétrique (FIGO) (2009).			
Units: Subjects			
Metastatic at Initial Diagnosis = Yes	94	96	190
Metastatic at Initial Diagnosis = No	214	213	427
Investigator Choice to Use Bevacizumab			
Randomization of participants was stratified by the Investigator's choice for the participant to receive bevacizumab (Yes or No).			
Units: Subjects			
Received Bevacizumab = Yes	196	193	389
Received Bevacizumab = No	112	116	228

Primary: Progression-free Survival (PFS) per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) as Assessed by Investigator in Participants with Programmed Cell Death-Ligand 1 (PD-L1) Combined Positive Score (CPS) ≥1

End point title	Progression-free Survival (PFS) per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) as Assessed by Investigator in Participants with Programmed Cell Death-Ligand 1 (PD-L1) Combined Positive Score (CPS) ≥1
End point description:	
PFS was defined as the time from randomization to the first documented progressive disease (PD) or death due to any cause, whichever occurs first. Per RECIST 1.1, PD was defined as ≥ 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study. In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of ≥5 mm. Note: The appearance of one or more new lesions was also considered PD. The PFS per RECIST 1.1 as assessed by Investigator for all randomized participants with PD-L1 CPS ≥1 is presented. All randomized participants with PD-L1 CPS ≥1 based on the treatment group to which they were randomized were analyzed.

End point description:	
For participants who demonstrate CR or PR, DOR was defined as the time from first documented evidence of CR or PR until disease progression or death. The DOR per RECIST 1.1 as assessed by Investigator is presented. All randomized participants based on the treatment group to which they were randomized who demonstrated CR or PR were analyzed.

End point description:	
PFS was defined as the time from randomization to the first documented progressive disease (PD) or death due to any cause, whichever occurs first. Per RECIST 1.1, PD was defined as $\geq 20\%$ increase in the sum of diameters of target lesions, taking as reference the smallest sum on study. In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of ≥ 5 mm. Note: The appearance of one or more new lesions was also considered PD. PFS Rate was defined as the percentage of participants that were PFS event-free at Month 12. The PFS Rate per RECIST 1.1 as assessed by Investigator at Month 12 is presented. All randomized participants based on the treatment group to which they were randomized were analyzed.

Secondary: Number of Participants Who Experienced an Immune-related AE (irAE)

End point title	Number of Participants Who Experienced an Immune-related AE (irAE)
End point description: AEs associated with pembrolizumab exposure may be a result of an immune response. These irAEs may occur shortly after the first dose or several months after the last dose of pembrolizumab treatment and	

may affect more than one body system simultaneously. For this study irAEs included, but were not limited to: -Pneumonitis;

-Diarrhea/Colitis;

-Aspartate transaminase (AST)/Alanine transaminase (ALT) elevation or Increased bilirubin;

-Type 1 diabetes mellitus or Hyperglycemia;

-Hypophysitis;

-Hyperthyroidism;

-Hypothyroidism;

-Nephritis and Renal dysfunction; and

-Myocarditis.

The number of participants who experienced an irAE is presented. All randomized participants who received at least one dose of study treatment were analyzed.

Statistical analyses

Secondary: Number of Participants with a 10-point Change from Baseline in Quality of Life (QoL) Based on the European Organisation for the Research & Treatment of Cancer (EORTC) QoL Questionnaire-30 (QLQ-C30) Combined Global Score

End point title	Number of Participants with a 10-point Change from Baseline in Quality of Life (QoL) Based on the European Organisation for the Research & Treatment of Cancer (EORTC) QoL Questionnaire-30 (QLQ-C30) Combined Global Score
-----------------	---

End point description:

The EORTC QLQ-C30 is a questionnaire to assess the QoL of participants. Responses to "How would you rate your overall health during the past week?" (Item 29) & "How would you rate your overall quality of life during the past week?" (Item 30) are scored on a 7-point scale (1= Very poor to 7=Excellent). Raw scores are standardized with linear transformation from 0-100. A higher combined score indicates a better overall health status. Participant post-baseline scores were classified as "Improved": a ≥ 10 -point improvement in score & confirmed by the next visit; "Stable": a ≥ 10 -point increase or < 10 -point change in score OR a < 10 -point change in score & a ≥ 10 -point increase in score at the next visit; or "Deteriorated": a ≥ 10 -point deterioration in score when the criteria for improvement/stability weren't met. Participants who didn't meet the above criteria were reported as "Other". All randomized participants who received ≥ 1 dose of treatment & completed ≥ 1 EORTC QLQ-C30 were analyzed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 66 months

Adverse event reporting additional description:

AEs included all participants who received ≥ 1 dose of study drug. All-Cause Mortality included all randomized participants. Per protocol, MedDRA preferred terms "Neoplasm progression", "Malignant neoplasm progression" & "Disease progression" not related to study treatment are excluded as AEs. Data are reported by treatment received.

Assessment type	Systematic

Reporting groups

Reporting group title	Pembrolizumab+Chemotherapy
-----------------------	----------------------------

Reporting group description:

On Day 1 of each 21-day cycle, participants received an intravenous (IV) infusion of pembrolizumab 200 mg for up to 35 cycles (up to approximately 2 years) PLUS Investigator choice of chemotherapy for up to 6 cycles (paclitaxel 175 mg/m² PLUS cisplatin 50 mg/m² WITH or WITHOUT bevacizumab 15 mg/kg per local label OR paclitaxel 175 mg/m² PLUS carboplatin Area Under the Curve (AUC) 5 for up to 6 cycles, WITH or WITHOUT bevacizumab 15 mg/kg per local label). All treatments were administered until disease progression or toxicity. Eligible participants who stopped the initial course of pembrolizumab with Stable Disease (SD) or better but progressed after discontinuation may have been able to initiate a second course of pembrolizumab for up to 17 cycles (up to approximately 1 additional year) at the investigator's discretion.

Reporting group title	Placebo+Chemotherapy
-----------------------	----------------------

Reporting group description:

On Day 1 of each 21-day cycle, participants received an IV infusion of placebo (Normal Saline or Dextrose solution) for up to 35 cycles (up to approximately 2 years) PLUS Investigator choice of chemotherapy for up to 6 cycles (paclitaxel 175 mg/m² PLUS cisplatin 50 mg/m² WITH or WITHOUT bevacizumab 15 mg/kg per local label OR paclitaxel 175 mg/m² PLUS carboplatin AUC 5 for up to 6 cycles, WITH or WITHOUT bevacizumab 15 mg/kg per local label). All treatments were administered until disease progression or toxicity.

Reporting group title	Pembrolizumab (Second Course)
-----------------------	-------------------------------

Reporting group description:

Eligible participants received up to 17 additional administrations (up to approximately 1 year) of pembrolizumab 200 mg IV on Day 1 of each 21-day cycle.
