Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 July 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 July 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study was to assess the efficacy of REGN3500 monotherapy in atopic dermatitis (AD), as well as understand the dose-response relationship, compared with placebo treatment, in adult subjects with moderate-to-severe AD.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with the International Council for Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 November 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Czechia: 18
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Hungary: 8
Country: Number of subjects enrolled	Australia: 9
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Japan: 6
Country: Number of subjects enrolled	Korea, Republic of: 25
Country: Number of subjects enrolled	United States: 48
Worldwide total number of subjects	129
EEA total number of subjects	40

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	122
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 238 subjects were screened at centers in North America (United States of America and Canada), Europe (Czech Republic, Germany, Hungary, Spain, and Poland), and Asia Pacific (Republic of Korea, Japan, and Australia). Out of which, 129 subjects met eligibility criteria and were randomized in this study.

Pre-assignment

Screening details:

Subjects were randomized in 1:1:1:1:1 ratio to 1 of the 5 treatment groups: Placebo every 2 weeks (Q2W); REGN3500 30 milligrams (mg) every 8 weeks (Q8W); REGN3500 100 mg every 4 weeks (Q4W); REGN3500 300 mg Q4W and REGN3500 300 mg Q2W.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Carer, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo Q2W

Arm description:

Subjects received 3 subcutaneous (SC) injections of placebo matched to REGN3500 on Day 1 and Week 8 and 2 SC injections of placebo matched to REGN3500 at Weeks 2, 4, 6, 10, 12, and 14.

Arm type	Placebo
Investigational medicinal product name	Placebo matched to REGN3500
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of placebo matched to REGN3500 on different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms so that the same site was not injected for 2 consecutive administrations.

Arm title	REGN3500 30 mg Q8W
------------------	--------------------

Arm description:

Subjects received 1 SC injection of REGN3500 (30 mg total dose) along with 2 SC injections of placebo matched to REGN3500 on Day 1 and Week 8 and 2 SC injections of placebo matched to REGN3500 at Weeks 2, 4, 6, 10, 12, and 14.

Arm type	Experimental
Investigational medicinal product name	Placebo matched to REGN3500
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of placebo matched to REGN3500 on different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms so that the same site was not injected for 2 consecutive administrations.

Investigational medicinal product name	REGN3500
Investigational medicinal product code	REGN3500
Other name	Itepekimab
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of REGN3500 on different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms so that the same site was not injected for 2 consecutive administrations.

Arm title	REGN3500 100 mg Q4W
------------------	---------------------

Arm description:

Subjects received 1 SC injection of REGN3500 (100 mg total dose) along with 2 SC injections of placebo matched to REGN3500 on Day 1 and Week 8 and 1 SC injection of REGN3500 (100 mg total dose) in combination with 1 SC injection of placebo matched to REGN3500 at Weeks 4 and 12 and 2 SC injections of placebo matched to REGN3500 at Weeks 2, 6, 10, and 14.

Arm type	Experimental
Investigational medicinal product name	Placebo matched to REGN3500
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of placebo matched to REGN3500 on different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms so that the same site was not injected for 2 consecutive administrations.

Investigational medicinal product name	REGN3500
Investigational medicinal product code	REGN3500
Other name	Itepekimab
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of REGN3500 on different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms so that the same site was not injected for 2 consecutive administrations.

Arm title	REGN3500 300 mg Q4W
------------------	---------------------

Arm description:

Subjects received 2 SC injections of REGN3500 (300 mg total dose) along with 1 SC injection of placebo matched to REGN3500 on Day 1 and Week 8 and 2 SC injections of REGN3500 (300 mg total dose) at Weeks 4 and 12 and 2 SC injections of placebo matched to REGN3500 at Weeks 2, 6, 10, and 14.

Arm type	Experimental
Investigational medicinal product name	Placebo matched to REGN3500
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of placebo matched to REGN3500 on different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms so that the same site was not injected for 2 consecutive administrations.

Investigational medicinal product name	REGN3500

Female	14	13	12
Male	11	13	15
Eczema Area and Severity Index (EASI) Score			
The EASI score was used to measure the severity and extent of atopic dermatitis (AD) and measures erythema, induration, excoriation and lichenification on 4 anatomic regions of the body: head, trunk, upper and lower extremities. The total EASI score ranges from 0 (minimum) to 72 (maximum) points, with the higher scores reflecting the worse severity of AD. The Full Analysis Set (FAS) includes all randomized subjects and was based on the treatment allocated (as randomized). Here, N = 24 for "REGN3500 300 mg Q4W" arm.

The total EASI score ranges from 0 (minimum) to 72 (maximum) points, with the higher scores reflecting the worse severity of AD. Percentage of subjects who achieved EASI-75 ($\geq 75\%$ Improvement from baseline) at Week 16 based on all observed values regardless of rescue treatment were reported. FAS included all randomized subjects and was based on the treatment allocated (as randomized). Here, "Number of Subjects Analysed" signifies those subjects who were evaluable for this endpoint.

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs), Serious TEAEs and Adverse Events of Special Interest (AESIs) up to Week 16

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs), Serious TEAEs and Adverse Events of Special Interest (AESIs) up to Week 16
-----------------	-----------------------------------------------------------------------------------------------------------------------------------------------

End point description:

AE: any untoward medical occurrence in a subject administered a study drug which may/may not have a causal relationship with study drug. Serious AE: any untoward medical occurrence that resulted in any of following outcomes: death, life-threatening, required initial/prolonged in-subject hospitalization, persistent/significant disability/incapacity, congenital anomaly/birth defect/considered as medically important event. TEAE was defined as AEs starting/worsening after first intake of the study drug. TEAEs included serious TEAEs and Non-serious TEAEs. AESI included: Anaphylactic reactions; Systemic/severe hypersensitivity reactions; Malignancy; Helminthic infections; Suicide-related events; Severe injection site reactions; Mycosis fungoides/other forms of cutaneous T-cell lymphoma; Conjunctivitis and significant ALT elevation. Safety analysis set (SAF) included all randomized subjects who received any study drug and was based on the treatment received (as treated).

Secondary: Serum Concentration of Functional REGN3500

End point title	Serum Concentration of Functional REGN3500 ^[18]
-----------------	------------------------------------------------------------

End point description:

Serum Concentration of Functional REGN3500 was reported. The Pharmacokinetic (PK) analysis set included all randomized subjects who received any study drug and who had at least 1 non-missing study drug concentration result following the first dose of study drug. Here, "n" signifies those subjects who were evaluable at given time points.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (Week 0), Weeks 2, 4, 8, 12, 16, 20, 24, 28, 32 and 36

Notes:

[18] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The Pharmacokinetic (PK) analysis set only included all randomized subjects who received any study drug and who had at least 1 non-missing study drug concentration result following the first dose of study drug.

Secondary: Number of Subjects With Positive Treatment-Emergent Anti-REGN3500 Antibodies (ADA)

End point title	Number of Subjects With Positive Treatment-Emergent Anti-REGN3500 Antibodies (ADA)
End point description:	
Treatment-Emergent (TE) ADA was defined as any positive post baseline assay response when baseline results were negative or missing. TE ADA responses were further classified as: - persistent (treatment-emergent positive ADA response detected in at least 2 consecutive post baseline samples separated by at least a 16-week post baseline period [based on nominal sampling time], with no ADA-negative samples in-between, regardless of any missing samples or a positive response at the last ADA sampling time point), - indeterminate (a positive assay response at the last collection time point only, regardless of any missing samples), - transient (not persistent/indeterminate, regardless of any missing samples). The Anti-drug Antibodies (ADA) analysis set included all treated subjects who received any amount of study drug (active or placebo [safety analysis set]) and had at least one non-missing anti-REGN3500 result following the first dose of study drug or placebo.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of the informed consent form up to the end of study (Week 36) regardless of seriousness or relationship to investigational product (IP).

Adverse event reporting additional description:

SAF included all randomized participants who received any study drug and was based on the treatment received (as treated).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 September 2018	- Modified exclusion criterion #4 to decrease the length of the washout period from 12 weeks to 4 weeks before the baseline visit for immunosuppressive/immunomodulating drugs (eg, systemic corticosteroids, cyclosporine, mycophenolate-mofetil, interferon-gamma [IFN-gamma], Janus kinase inhibitors, azathioprine, methotrexate, etc) and phototherapy. These washout changes were consistent with the prior dupilumab adult atopic dermatitis phase 3 studies (eg, R668-AD-1224) and acceptable for subjects enrolled in this study - Updated exclusion criterion #11 to be consistent with prior dupilumab adult atopic dermatitis phase 3 studies (eg, R668-AD-1224). Active chronic or acute infection requiring systemic treatment with antibiotics, antivirals, antiparasitics, antiprotozoals, or antifungals within 2 weeks (was previously 8 weeks before the screening visit) before the baseline visit, or superficial skin infections within 1 week (was previously 4 weeks before the screening visit) before the baseline visit
29 November 2018	- Added text in Exclusion Criterion #12 to specify that subjects with a positive tuberculosis (TB) QuantiFERON test result will be excluded from the study - Exclusion Criterion # 20: Added myocardial infarction, unstable arterial hypertension, unstable angina, and cerebrovascular accident as examples of uncontrolled cerebrocardiovascular conditions that will exclude a subject from the study - Exclusion Criterion #25: Added clarification that the reliability of sexual abstinence needs to be evaluated in relation to the duration of the clinical trial and the preferred and usual lifestyle of the patient, based on Clinical Trial Facilitation Group guideline on contraception
03 January 2019	- Added secondary safety and pharmacokinetic (PK) endpoints

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
12 February 2020	The decision was made by the sponsor to terminate the study on 12 Feb 2020 due to lack of efficacy. Study enrollment was not complete at that time, therefore planned sample sizes were not met. Subjects discontinued study drug and transitioned into the post-treatment follow-up period.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As a result of the decision to terminate the study, all statistical analyses were descriptive and no hypothesis testing was performed.

Notes:
