

## Clinical trial results:

### Interventional, Randomized, Double-Blind, Parallel-Group, Placebo-Controlled, Fixed-Flexible-Dose Study of Lu AF11167 for the Treatment of Persistent Prominent Negative Symptoms in Patients With Schizophrenia

#### Summary

EudraCT number	2018-001581-42
Trial protocol	EE LV HU BG PL CZ
Global end of trial date	03 September 2020

#### Results information

Result version number	v1 (current)
This version publication date	03 September 2021
First version publication date	03 September 2021

#### Trial information

##### Trial identification

Sponsor protocol code	17972A
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03793712
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	H. Lundbeck A/S
Sponsor organisation address	Ottiliavej 9, Valby, Denmark, 2500
Public contact	LundbeckClinicalTrials@lundbeck.com, H. Lundbeck A/S, +45 36301311, LundbeckClinicalTrials@lundbeck.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 September 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 August 2020
Global end of trial reached?	Yes
Global end of trial date	03 September 2020
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the trial was to evaluate the efficacy of 2 fixed-flexible doses (1-2 milligrams [mg]/day and 3-4 mg/day) of Lu AF11167 as monotherapy on negative symptoms in participants with schizophrenia with persistent prominent negative symptoms.

Protection of trial subjects:

This study was conducted in compliance with Good Clinical Practice.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 December 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 68
Country: Number of subjects enrolled	Czechia: 2
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Estonia: 16
Country: Number of subjects enrolled	Hungary: 5
Country: Number of subjects enrolled	Latvia: 7
Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Ukraine: 60
Worldwide total number of subjects	162
EEA total number of subjects	102

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	162
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study design included a 1- to 4-week Screening and Washout Period (to assess the eligibility of participants), a 1-week Placebo Run-in Period (to confirm the stability of participant's clinical condition as well as persistence of their prominent negative symptoms), a 12-week Double-blind Treatment Period, and a 2-week Safety Follow-up Period.

### Pre-assignment

Screening details:

Participants were randomly assigned (1:1:1) to double-blind treatment with Lu AF11167 1-2 mg/day, Lu AF11167 3-4 mg/day, or placebo for 12 weeks.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants received placebo matched to Lu AF11167 tablet orally once daily for a total of 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Modified-release tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to Lu AF11167 will be administered per schedule specified in the arm description.

<b>Arm title</b>	Lu AF11167 1-2 mg/day
------------------	-----------------------

Arm description:

Participants received Lu AF11167 tablet orally once daily at a starting dose of 2 mg/day. If this dose was not tolerated after the first week of treatment, the dose was reduced to 1 mg/day once daily and participants stayed on that dose for the remainder of the study. Total treatment duration was 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Lu AF11167
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Modified-release tablet
Routes of administration	Oral use

Dosage and administration details:

Lu AF11167 will be administered per dose and schedule specified in the arm description.

<b>Arm title</b>	Lu AF11167 3-4 mg/day
------------------	-----------------------

Arm description:

Participants received Lu AF11167 tablet orally once daily at a starting dose of 4 mg/day. If this dose was not tolerated after the first week of treatment, the dose was reduced to 3 mg/day once daily and participants stayed on that dose for the remainder of the study. Total treatment duration was 12 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Lu AF11167
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Modified-release tablet
Routes of administration	Oral use

Dosage and administration details:

Lu AF11167 will be administered per dose and schedule specified in the arm description.

<b>Number of subjects in period 1</b>	Placebo	Lu AF11167 1-2 mg/day	Lu AF11167 3-4 mg/day
Started	54	54	54
Received at Least 1 Dose of Study Drug	54	54	54
Completed	39	36	36
Not completed	15	18	18
Consent withdrawn by subject	4	1	5
Adverse event, non-fatal	2	5	4
Other than specified	7	12	8
Lack of efficacy	2	-	1

## Baseline characteristics

If this dose was not tolerated after the first week of treatment, the dose was reduced to 3 mg/day once daily and participants stayed on that dose for the remainder of the study. Total treatment duration was 12 weeks.	

### Primary: Change From Baseline in Brief Negative Symptom Scale (BNSS) Total Score at Week 12

End point title	Change From Baseline in Brief Negative Symptom Scale (BNSS) Total Score at Week 12
End point description:	
The BNSS is a brief clinician rating scale, intended to measure negative symptoms. It consists of 13 items organized into 6 subscales: anhedonia, distress, asociality, avolition, blunted affect and alogia. The items score the impairment. Items 1 to 4 were rated from 0 (Normal) to 6 (Extremely severe) and items 5 to 13 were rated from 0 (No impairment) to 6 (Severe deficit). The BNSS total score was calculated by summing the 13 individual items. The BNSS total scores range from 0 to 78. Full analysis set (FAS) included all randomized participants who took at least 1 dose of the double-blind study drug and who had a valid baseline assessment and at least 1 valid post-baseline assessment of the primary efficacy variable. 'Overall number of participants analyzed' = participants analyzed for this endpoint.	
End point type	Primary

### Secondary: Change From Baseline in Positive and Negative Syndrome Scale (PANSS) Marder Negative Symptom Factor score: Negative Symptoms at Week 12

End point title	Change From Baseline in Positive and Negative Syndrome Scale (PANSS) Marder Negative Symptom Factor score: Negative Symptoms at Week 12
-----------------	---

End point description:

PANSS is a clinician rated scale designed to measure severity of psychopathology in adult participants with schizophrenia, schizoaffective disorders and other psychotic disorders. It includes 3 sub-scales and 30 items: 7 items for positive scale (for example: delusions, conceptual disorganization, and hallucinatory behaviour), 7 items for negative scale (for example: blunted affect, emotional withdrawal,

and poor rapport) and 16 items for general psychopathology scale (for example: somatic concern, anxiety, and guilt feelings). Each item is rated from 1 (no symptoms) to 7 (extremely severe symptom). PANSS total score: sum of all items and ranges from 30 to 210. Subscale scores: sum of items within each subscale. FAS: all randomized participants who took at least 1 dose of double-blind study drug and who had a valid baseline and at least 1 valid post-baseline assessment of the primary efficacy variable. 'Overall number of participants analyzed'=participants analyzed for this endpoint.

**Secondary: Change From Baseline in Calgary Depression Scale for Schizophrenia (CDSS) Total Score at Week 12**

End point title	Change From Baseline in Calgary Depression Scale for Schizophrenia (CDSS) Total Score at Week 12
-----------------	--

End point description:

The CDSS is a 9-item clinician rated scale specifically developed for the assessment of depression in participants with schizophrenia. The items on the CDSS were all typical depressive symptoms and do not appear to overlap with the negative symptoms of schizophrenia. All items were rated on a 4-point scale from 0 (absent) to 3 (severe). Anchor point descriptions were provided to aid differentiation between each item score. The first 8 items were rated on the basis of the participant's responses to questions during a semi-structured interview; the ninth item was based on the clinician's assessment of the participant over the course of the interview. The total score ranges from 0 to 27. FAS included all randomized participants who took at least 1 dose of the double-blind study drug and who had a valid baseline assessment and at least 1 valid post-baseline assessment of the primary efficacy variable. 'Overall number of participants analyzed' = participants analyzed for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 12

<b>End point values</b>	Placebo	Lu AF11167 1- 2 mg/day	Lu AF11167 3- 4 mg/day	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	39	36	38	
Units: units on a scale				
arithmetic mean (standard error)	-0.46 (± 0.18)	-0.25 (± 0.18)	-0.34 (± 0.17)	

### Statistical analyses

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline up to Week 14

Adverse event reporting additional description:

APTS included all randomized participants who took at least 1 dose of the double-blind study drug.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 November 2018	This amendment was prepared to update the heart-rate corrected QT interval using Fridericia's correction formula (QTcF) withdrawal criteria, to update the Cogstate Schizophrenia Cognitive Battery, and to provide clarifications and corrections to the protocol.
13 December 2019	This amendment has been prepared to update inclusion criteria and exclusion criteria. Other minor clarifications and corrections were also made. <ul style="list-style-type: none"><li>- Inclusion criterion was changed for the participants being known and treated by the site or investigator from 12 months to 6 months to align eligibility requirements across other inclusion and exclusion criteria addressing stability of the participant.</li><li>- Inclusion criterion was updated to allow a 2nd antipsychotic used for sleep problems, if approved by the Medical Monitor, as sleep problems are common in this participant population.</li><li>- Inclusion criterion was updated to clarify that hospitalization for social reasons is not exclusionary.</li><li>- Exclusion criterion was updated to allow thyroid stimulating hormone (TSH) values outside of the reference range if deemed not clinically significant by the investigator and approved by the Medical Monitor.</li></ul>
11 May 2020	This amendment has been prepared to increase the number of sites, add an interim analysis for futility, add that re-screening may be allowed in certain circumstances, and to add the United States as a participating country.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to lack of efficacy based on the interim analysis, this study was terminated early.

Notes:
