

Clinical trial results:

A double blind, placebo-controlled study to assess the anti-viral effect, safety and tolerability of inhaled PC786 for the treatment of acute respiratory syncytial virus (RSV) infection in adult hematopoietic stem cell transplant recipients

Summary

EudraCT number	2018-001667-24
Trial protocol	GB
Global end of trial date	19 February 2019

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	27 February 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 February 2019
Global end of trial reached?	Yes
Global end of trial date	19 February 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

- To evaluate the anti-viral effect of inhaled PC786 compared with placebo when added to standard of care (SoC) RSV treatment in haematopoietic stem cell transplant (HSCT) recipients with acute RSV infection
- To assess the safety and tolerability of 3 days of inhaled PC786 in HSCT subjects with acute RSV infection

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practice and applicable regulatory requirements. Known instances of non-conformance were documented and are not considered to have had an impact on the overall conclusions of the study.

Background therapy:

Subjects received SoC for treatment of RSV at the study site. All medications taken were recorded. Oral ribavirin was permitted at all times on the study. Intravenous ribavirin treatment as SoC may be administered if required, only if a subject was already enrolled in the study. Treatment with intravenous immunoglobulins was permitted throughout the study.

Evidence for comparator: -

Actual start date of recruitment	11 December 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 5
Worldwide total number of subjects	5
EEA total number of subjects	5

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	5
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Six subjects met all of the eligibility criteria and were randomised to receive treatment at 3 sites in the UK between 11 Dec 2018 and 19 Feb 2019. One subject was withdrawn from the study without being dosed. Five subjects who received 3 doses of PC786 or placebo were therefore included in the safety population.

Pre-assignment

Screening details:

It was planned to recruit 30 subjects, with a minimum of 15 subjects to conduct an interim analysis after the winter 18/19 season. A total of six subjects were screened to take part in the study, of which, five subjects were randomised and completed the study.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

Due to a difference in appearance of the active and placebo treatments, the investigational product was prepared and dosed by independent staff team members who did not undertake any other study duties.

Arms

Are arms mutually exclusive?	Yes
Arm title	PC786

Arm description:

Once daily doses of PC786 10mg administered by inhalation via a face mask for a total of 3 doses

Arm type	Experimental
Investigational medicinal product name	PC786 powder for reconstitution 30mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser suspension
Routes of administration	Inhalation use

Dosage and administration details:

Nebulised PC786 was administered by inhalation via a facemask at the study site at a dose of 10 mg once daily for three days. In addition to the study drug, subjects were treated according to the SoC at the study site.

Arm title	Placebo
------------------	---------

Arm description:

Once daily doses of placebo administered by inhalation via a face mask for a total of 3 doses

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Nebulised placebo was administered by oral inhalation via a face mask once daily for 3 doses. In addition to the study drug, subjects were treated according to the SoC at the study site.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Consent until completion of the subject's last study-related procedure (which may include contact for follow-up of safety).

Adverse event reporting additional description:

All clinically relevant changes (including laboratory safety testing), with the exception of expected signs and symptoms of RSV-related illness, observed during the study were recorded as an AE.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Poor recruitment during the 2018/19 RSV season meant that an interim analysis to adjust the sample size was not possible. The chances of completing enrolment in the study in the 2019/20 RSV season were low and the study was terminated prematurely.

Notes:
